## Disclaimer

All information contained herein is provided "AS IS." Lantronix undertakes no obligation to update the information in this publication. Lantronix does not make, and specifically disclaims, all warranties of any kind (express, implied or otherwise) regarding title, non-infringement, fitness, quality, accuracy, completeness, usefulness, suitability or performance of the information provided herein. Lantronix shall have no liability whatsoever to any user for any damages, losses and causes of action (whether in contract or in tort or otherwise) in connection with the user's access or usage of any of the information or content contained herein. The information and specifications contained in this document are subject to change without notice.

## Revision History

Rev	Date	Description
G	6/21/21	FW vB6.64.0031: add PoE Force mode, support one VLAN interface gateway for the default route, add two device icons in DMS, and add API commands. Add note on the time it takes to have PoE++ power on the ports to power PDs again after a cold restart.
H	4/26/22	Initial Lantronix SM24TBT2DPB release at FW vB6.64.0045. SM24TBT2DPA FW vB6.64.0043.
J	11/30/22	FW vB6.64.0079: add DHCP per port function to select a particular IP interface. Change default settings: SNMP mode stays Disabled as factory default and change Auth Method Configuration default. Add DHCP option 229 support. In PoE schedule, if Start Time = End Time, reset PoE power on the ports. Add ConsoleFlow in web/cli/api, add CF On-premise support, add CF S/N and LPM MAC address, and support API in https. Note that SM24TBT2DPA is EoL. Note change to Power Supply monitoring.
K	7/16/24	FW VB6.64.0123: Update to TLSv1.2 ciphers. Allow special characters in Web PoE profile name. Change ConsoleFlow to Percepion. Change self-signed certificates. Update LLDP-MED Neighbor Information. Allow dash (-) for status update interval and content check interval and switch disconnect from server. Automatically save Config changes to Start-Up Config in Percepion server. Add a Caution that Forcing the switch to send POE to non-POE devices can physically damage those devices. Modify Device/Product type API format. Add Capability Negotiation Definition with Percepion Server. Fix show SNMP user command and Percepion telemetry exchange issues. See the Release Notes for details.

# 1. CLI Management

## 1-1 Introduction

This manual gives specific information on how to operate and use the Command Line Interface (CLI) of the SM24TBT2DPA and SM24TBT2DPB switches. This manual is intended for use by network administrators who are responsible for operating and maintaining network equipment; consequently, it assumes a basic working knowledge of Ethernet switch functions, the Internet Protocol (IP), and Simple Network Management Protocol (SNMP).

## 1-2 CLI Connection

This section provides a brief description of the network connection.

1. Locate the correct DB-9 (RS-232) cable with female DB-9 connector. RS-232 cable is used for connecting a terminal or terminal emulator to the Managed Switch's RJ45 port to access the command-line interface.
2. Attach the RJ45 serial port on the switch's front panel which used to connect to the switch for console configuration.
3. Attach the other end of the DB-9 cable to an ASCII terminal emulator or PC Com-1 or Com-2 port. For example, a PC running Microsoft Windows HyperTerminal utility.
4. At "Com Port Properties" Menu, configure the parameters as below: (see the next section).

Baud rate	115200
Stop bits	1
Data bits	8
Parity	N
Flow control	none

### 1-3 Login

The command-line interface (CLI) is a text-based interface. You can access the CLI through either a direct serial connection to the device or a Telnet session. The default username and password to login into the Switch are:

Username: admin

Password: admin

After you login successfully, the prompt will be shown as “<sys\_name>#” . This means you are treated as an administrator and have the privilege for setting the Managed Switch. If logged in as other than the administrator, the prompt will be shown as “<sys\_name>>”, meaning you are treated as a guest and are only allowed for setting the system under the administrator. Each CLI command has its own privilege level.

Username: admin

Password: admin

SM24TBT2DPA#

### 1-4 Prinvilege Levels

Every command has a privilege level of 0-15. You can run a command if the session's privilege level is greater than or equal to the command's privilege level. The session's privilege level initially comes from the login account's privilege level; it is possible to change the session's privilege level after logging in.

Privilege Level	Types of Commands at This Privilege Level
0	Display basic system information.
13	Configure features except for login accounts, the authentication method sequence, multiple logins, and administrator and enable passwords.
15	Configure login accounts, the authentication method sequence, multiple logins, and administrator and enable passwords.

## 1-5 Command Modes

The CLI is divided into several modes. If a user has enough privilege to run a particular command, they have to run the command in the correct mode. The modes available depend on the session's privilege level.

To see the commands of a mode, enter a “?” after the system prompt, then all commands will be listed in the screen. The command modes are listed below:

Mode	Prompt	Command Function in This Mode
exec	<sys_name>#	Display current config, diagnostics, maintenance
config	<sys_name>(config)#	Configure features other than those below
Config-if	<sys_name>(config-interface)#	Configure ports
Config-if-vlan	<sys_name>(config-if-vlan)#	Configure static vlan
Config-line	<sys_name>(config-line)#	Line Configuration
Config-impc-profile	<sys_name>(config-impc-profile)#	IPMC Profile
Config-snmp-host	<sys_name>(config-snmp-host)#	SNMP Server Host
Config-stp-aggr	<sys_name>(config-stp-aggr)#	STP Aggregation
Config-dhcp-pool	<sys_name>(config-dhcp-pool)#	DHCP Pool Configuration
Config-rfc2544-profile	<sys_name>(config-rfc2544-profile)#	RFC2544 Profile

CLI commands exist in various modes and can be run only in that mode. To run a particular command, you must change to the appropriate mode. The following table explains how to change from one mode to another.

### Change Between Command Modes

Mode	Enter Mode	Leave Mode
exec	--	--
config	Configure terminal	exit
config-interface	Interface <port-type> <port-type-list>	exit
config-vlan	Interface vlan <vlan_list>	exit

## Controls

```
-- more --, next page: Space, continue: g, quit: ^C
```

Control	Function
-- more --	Indicates that more page info can be displayed.
next page: Space	Hit the space key to display additional page data.
continue: g	Press the g key to display additional page data.
quit: ^C	Press Ctrl and C keys together to return to the command prompt.
?	Press the ? key to display available commands in a list.
??	Press the ? key twice to display available commands' syntax.
<Tab>	Press the TAB key to display available commands in table format.

## 1-6 Related Manuals

These manuals give specific information on how to operate switch functions:

- SM24TBT2DPA Quick Start Guide, 33736
- SM24TBT2DPA Install Guide, 33737
- SM24TBT2DPB Quick Start Guide, 33844
- SM24TBT2DPB Install Guide, 33845
- SM24TBT2DPA and DPB Web User Guide, 33738
- SM24TBT2DPA and DPB API User Guide, 33822
- Release Notes (version specific)

For Lantronix Drivers, Firmware, Manuals, Product Notifications, Warranty Policy & Procedures, etc. go to the Lantronix [Technical Resource Center](#).

Note that this manual provides links to third party web sites for which Lantronix is not responsible.

The following sections introduce CLI privilege levels and command modes.

- The privilege level determines whether or not the user can run a particular command;
- If you have sufficient privilege level to run a particular command, then you must run the command in the correct mode.

## 1-7 Exec Mode CLI Commands

The Exec mode (global) CLI commands are shown below:

```
SM24TBT2DPB# ?
  CableDiag      Cable Diagnostic keyword
  clear          Reset functions
  configure      Enter configuration mode
  copy           Copy from source to destination
  debug          Debugging functions
  delete         Delete one file in flash: file system
  dir            Directory of all files in file system
  disable        Turn off privileged commands
  do             To run exec commands in config mode
  dot1x          IEEE Standard for port-based Network Access Control
  enable         Turn on privileged commands
  exit           Exit from EXEC mode
  firmware       Firmware upgrade/swap
  help           Description of the interactive help system
  ip             IPv4 commands
  logout         Exit from EXEC mode
  more           Display file
  no             Negate a command or set its defaults
  ping           Send ICMP echo messages
  reload         Reload system.
  send           Send a message to other tty lines
  show           Show running system information
  terminal       Set terminal line parameters
  traceroute     traceroute program
SM24TBT2DPB#
```

## **exit**

Exit from EXEC mode.

**Syntax:** `exit`

**Parameters:** None.

**Example:**

```
SM24TBT2DPA# exit
```

```
Username:
```

```
Password:
```

```
Wrong username or password!
```

```
Username: admin
```

```
Password: admin
```

```
SM24TBT2DPA#
```

## **help**

Description of the interactive help system.

**Syntax:** `help`

**Parameters:** None.

**Example:**

```
SM24TBT2DPB# help
```

```
Help may be requested at any point in a command by entering  
a question mark '?'. If nothing matches, the help list will  
be empty and you must backup until entering a '?' shows the  
available options.
```

Two styles of help are provided:

1. Full help is available when you are ready to enter a command argument (e.g. 'show ?') and describes each possible argument.
2. Partial help is provided when an abbreviated argument is entered and you want to know what arguments match the input (e.g. 'show pr?').

```
SM24TBT2DPB#
```

***logout***

Exit from EXEC mode. Press ENTER and then log back in.

**Syntax:** **logout**

**Parameters:** none

**Example:**

```
SM24TBT2DPA# logout
```

```
Username: admin
```

```
Password: admin
```

```
SM24TBT2DPA#
```

***end***

Go back to EXEC mode from Config mode.

**Syntax:** **end**

**Parameters:** none

**Example:**

```
SM24TBT2DPA# con ter
```

```
SM24TBT2DPA(config)# end
```

```
SM24TBT2DPA#
```

## 2. Clear Commands

**Table** : Clear Command Parameters

<b>Command</b>	<b>Function</b>
access	Access management
access-list	Access list
dot1x	IEEE Standard for port-based Network Access Control
ip	Interface Internet Protocol config commands
ipv6	IPv6 configuration commands
lacp	Clear LACP statistics
lldp	Clears LLDP statistics.
logging	Syslog
mac	MAC Address Table
mvr	Multicast VLAN Registration configuration
port-security	Enable/disable port security globally.
sflow	Statistics flow.
spanning-tree	STP Bridge
statistics	Clear statistics for a given interface
management	Access management configuration
statistics	Statistics data
ace	Access list entry
statistics	Traffic statistics
arp	Clear ARP cache
dhcp	Dynamic Host Configuration Protocol
igmp	Internet Group Management Protocol
statistics	Traffic statistic
detailed	Detailed statistics
relay	DHCP relay agent configuration
server	Miscellaneous DHCP server information
snooping	DHCP snooping
all	Clear all DHCP related statistics
client	DHCP client
helper	DHCP normal L2 or L3 forward
relay	DHCP relay
server	DHCP server
snooping	DHCP snooping
mld	Multicasat Listener Discovery
neighbors	IPv6 neighbors
statistics	Traffic statistics
interface	Interface
*	All switches or All ports
GigabitEthernet	1 Gigabit Ethernet Port
snooping	Snooping MLD
statistics	Running MLD snooping counters
vlan	Search by VLAN
<vlan_list>	VLAN identifier(s): VID

statistics	Clear all LACP statistics
statistics	Clears LLDP statistics.
error	Error
info	Information
warning	Warning
address-table	Flush MAC Address table
name	MVR multicast name
statistics	Running MVR protocol counters
vlan	MVR multicast vlan
<MvrName : word16>	MVR multicast VLAN name
<vlan_list>	MVR multicast VLAN list
sticky	port security sticky function per interface.
All	clear all sticky mac at all ports
interface	Choose port
receiver	Clear statistics for receiver.
<Samplers : option>	runtime, see sflow_icli_functions.c
detected-protocols	Set the STP migration check
statistics	STP statistics

## access

Clear Access management.

**Syntax:** `clear access management statistics`

**Parameters:**

<b>management</b>	Access management configuration.
<b>statistics</b>	Statistics data.

**Example:**

```
SM24TBT2DPA # clear access management statistics
SM24TBT2DPA #
SM24TBT2DPB# clear sflow statistics interface GigabitEthernet 1/9
E sflow 00:33:33 13.800,000 153/sflow_icli_statistics#810: Error: Sorry don't
know what to do
SM24TBT2DPB# clear access-list ace statistics
SM24TBT2DPB# clear ip dhcp detailed statistics client
SM24TBT2DPB# clear ipv6 mld snooping vlan 100 statistics
SM24TBT2DPB# clear lacp statistics
SM24TBT2DPB# clear spanning-tree statistics
SM24TBT2DPB#
```

## **access-list**

Clear Access list.

**Syntax:** **Clear** access-list ace statistics

**Parameters:**

**ace** Access list entry

**statistics** Traffic statistics

**Example:**

```
SM24TBT2DPA# clear access-list ace statistics
```

```
SM24TBT2DPA#
```

## **dot1x**

Clear IEEE Standard for port-based Network Access Control.

**Syntax**

**Clear** dot1x statistics

**Clear** dot1x statistics interface GigabitEthernet < PORT\_TYPE\_LIST >

**Parameters**

**statistics** Clears the statistics counters

**interface** Interface

**GigabitEthernet** 1 Gigabit Ethernet Port

**PORT\_TYPE\_LIST** Port list in 1/1-24 for Gigabit Ethernet

**EXAMPLE**

```
SM24TBT2DPA# clear dot1x statistics interface GigabitEthernet 1/1-24
```

```
SM24TBT2DPA#
```

**ip**

Clear Interface Internet Protocol config commands

**Syntax**

```
clear ip arp  
clear ip dhcp detailed statistics { server | client | snooping | relay | helper | all } [ interface ( <port_type>  
[ <in_port_list> ] ) ]  
clear ip dhcp relay statistics  
clear ip dhcp server binding <ip>  
clear ip dhcp server binding { automatic | manual | expired }  
clear ip dhcp server statistics  
clear ip dhcp snooping statistics [ interface ( <port_type> [ <in_port_list> ] ) ]  
clear ip igmp snooping [ vlan <v_vlan_list> ] statistics  
clear ip statistics [ system ] [ interface vlan <v_vlan_list> ] [ icmp ] [ icmp-msg <type> ]
```

**Parameters**

<b>arp</b>	Clear ARP cache
<b>dhcp</b>	Dynamic Host Configuration Protocol
<b>igmp</b>	Internet Group Management Protocol
<b>statistics</b>	Traffic statistics
<b>relay</b>	DHCP relay agent configuration
<b>snooping</b>	DHCP snooping
<b>interface</b>	Select an interface to configure
<b>GigabitEthernet</b>	1 Gigabit Ethernet Port
<b>vlan</b>	IPv4 traffic interface
<b>&lt;vlan_list&gt;</b>	VLAN identifier(s): VID

**EXAMPLE**

```
SM24TBT2DPA# clear ip arp  
SM24TBT2DPA# clear ip dhcp detailed statistics all interface GigabitEthernet 1/1-24  
SM24TBT2DPA# clear ip dhcp relay statistics  
SM24TBT2DPA# clear ip dhcp server binding 192.168.1.11  
SM24TBT2DPA# clear ip dhcp server binding automatic  
SM24TBT2DPA# clear ip dhcp server statistics  
SM24TBT2DPA# Clear ip dhcp snooping statistics interface GigabitEthernet 1/1-24  
SM24TBT2DPA# clear ip igmp snooping vlan 1 statistics  
SM24TBT2DPA# clear ip statistics system interface  
SM24TBT2DPA# clear ip statistics system interface vlan 1 icmp icmp-msg 2
```

## ipv6

Clear IPv6 configuration commands.

### Syntax

```
clear ipv6 mld snooping [ vlan <v_vlan_list> ] statistics  
clear ipv6 neighbors  
clear ipv6 statistics [ system ] [ interface vlan <v_vlan_list> ] [ icmp ] [ icmp-msg <type> ]
```

### Parameters

<b>mld</b>	Multicast Listener Discovery
<b>neighbors</b>	Ipv6 neighbors
<b>statistics</b>	Traffic statistics
<b>snooping</b>	Snooping MLD
<b>statistics</b>	Running MLD snooping counters
<b>vlan</b>	Ipv6 interface traffic
<b>&lt;vlan_list&gt;</b>	VLAN identifier(s): VID
<b>icmp</b>	IPv6 ICMP traffic
<b>icmp-msg</b>	IPv6 ICMP traffic for designated message type
<b>interface</b>	Select an interface to configure
<b>system</b>	IPv6 system traffic
<b>&lt; 0~255&gt;</b>	ICMP message type ranges from 0 to 255

### EXAMPLE

```
SM24TBT2DPA# clear ipv6 mld snooping vlan 3 statistics  
SM24TBT2DPA# clear ipv6 neighbors  
SM24TBT2DPA# clear ipv6 statistics system icmp icmp-msg 2
```

## **lacp**

Clear LACP statistics.

**Syntax:** **Clear lacp** statistics

**Parameters :**

**statistics** Clear all LACP statistics

### **EXAMPLE**

```
SM24TBT2DPA# clear ipv6 mld snooping vlan 3 statistics
SM24TBT2DPA# clear ipv6 neighbors
SM24TBT2DPA# Clear ipv6 statistics system icmp icmp-msg 2
```

## **lldp**

Clears LLDP statistics.

**Syntax**

**Clear lldp** statistics

**Clear lldp** statistics| begin | exclude | include >< LINE >

**Parameters**

**statistics** Clears LLDP statistics.

| Output modifiers

**begin** Begin with the line that matches

**exclude** Exclude lines that match

**include** Include lines that match

**<LINE>** String to match output lines

### **EXAMPLE**

```
SM24TBT2DPA# clear lldp statistics | begin LINE
SM24TBT2DPA#
```

## ***logging***

Clear Syslog (system logging).

### **Syntax**

```
clear logging [ info ] [ warning ] [ error ] [ switch <switch_list> ]
```

### **Parameters**

**error** Error

**info** Information

**warning** Warning

### **EXAMPLE**

```
SM24TBT2DPA# clear logging info error warning  
SM24TBT2DPA#
```

## ***mac***

Clear MAC Address Table.

### **Syntax**

```
Clear mac address-table
```

### **Parameter**

**address-table** Flush MAC Address table.

### **EXAMPLE**

```
SM24TBT2DPA# clear mac address-table  
SM24TBT2DPA#
```

## ***mvr***

Clear Multicast VLAN Registration configuration.

### **Syntax**

```
clear mvr [ vlan <v_vlan_list> | name <mvr_name> ] statistics
```

### **Parameters**

**name** MVR multicast name

**statistics** Running MVR protocol counters

**vlan** MVR multicast vlan

**<word16>** MVR multicast VLAN name

**<vlan\_list>** MVR multicast VLAN list

### **EXAMPLE**

```
SM24TBT2DPA# clear mvr vlan 25 statistics  
SM24TBT2DPA#
```

## port-security

Clear port security globally.

### Syntax

```
clear port-security sticky { All | interface ( <port_type> [ <plist> ] ) }
```

### Parameters

sticky	port security sticky function per interface.
All	clear all sticky mac at all ports
interface	Choose port
*	All switches or All ports
GigabitEthernet	1 Gigabit Ethernet Port
PORT_LIST	Port list in 1/1-26

### EXAMPLE

```
SM24TBT2DPA# clear port-security sticky interface GigabitEthernet 1/2-8
SM24TBT2DPA# clear port-security sticky all
SM24TBT2DPA#
```

## sflow

Clear Statistics flow.

### Syntax

```
clear sflow statistics { receiver [ <receiver_index_list> ] | samplers [ interface [ <samplers_list> ] ( <port_type>
[ <v_port_type_list> ] ) ] }
```

### Parameters

interface	Interface
receiver	Clear statistics for receiver.
<port_type>	GigabitEthernet
<Samplers : option>	runtime
<port_type_list>	Port list in 1/1-24 for Gigabit Ethernet

### EXAMPLE

```
SM24TBT2DPA# clear sflow statistics interface GigabitEthernet 1/1-24
E sflow 20:37:43 63.950,000 146/sflow_icli_statistics#810: Error: Sorry don't kn
ow what to do
SM24TBT2DPA# clear sflow statistics receiver
SM24TBT2DPA#
```

## **spanning-tree**

Clear Spanning Tree Protocol Bridge.

### **Syntax**

```
clear spanning-tree { { statistics [ interface ( <port_type> [ <v_port_type_list> ] ) ] } | { detected-protocols [ interface ( <port_type> [ <v_port_type_list_1> ] ) ] } }
```

### **Parameters**

<b>detected-protocols</b>	Set the STP migration check
<b>statistics</b>	STP statistics
<b>interface</b>	Choose port
<b>&lt;port_type&gt;</b>	GigabitEthernet
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet

### **EXAMPLE**

```
SM24TBT2DPA# clear spanning-tree detected-protocols interface GigabitEthernet 1/1-8  
SM24TBT2DPA#
```

## **statistics**

Clear statistics for a given interface

### **Syntax**

```
clear statistics interface <port_type> <port_type_list>  
clear statistics <port_type> <port_type_list>
```

### **Parameters**

<b>&lt;port_type&gt;</b>	GigabitEthernet
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-8 for Gigabit Ethernet

### **EXAMPLE**

```
SM24TBT2DPA# clear statistics GigabitEthernet 1/1-24  
SM24TBT2DPA#
```

### 3. Config Mode Commands

The set of supported Config mode commands is shown below. To enter Config mode from Exec mode, type `configure terminal` and hit Enter. To display the set of Config Mode commands, enter a ? and hit Enter:

```
SM24TBT2DPA(config)# ?

Power                  Power
aaa                   Authentication, Authorization and Accounting
access                Access management
access-list            Access list
aggregation           Aggregation mode
always-on-poe          Enable Always On PoE
banner                Define a login banner
clock                 Configure time-of-day clock
default               Set a command to its defaults
dms                  Enable DMS Master
do                   To run exec commands in config mode
dot1x                IEEE Standard for port-based Network Access Control
enable               Modify enable password parameters
end                  Go back to EXEC mode
event                Trap event severity level
exec-timeout          autologout
exit                 Exit from current mode
green-ethernet         Green ethernet (Power reduction)
gvrp                 Enable GVRP feature
help                 Description of the interactive help system
hostname              Set system's network name
interface             Select an interface to configure
ip                   Internet Protocol
ipmc                IPv4/IPv6 multicast configuration
ipv6                 IPv6 configuration commands
lacp                 LACP settings
line                 Configure a terminal line
lldp                 LLDP configurations.
logging              Syslog
loop-protect          Loop protection configuration
```

mac	MAC table entries/configuration
map-api-key	Set Google map key string
monitor	Set monitor configuration.
mvr	Multicast VLAN Registration configuration
no	Negate a command or set its defaults
ntp	Configure NTP
percepexion	Configure Percepexion parameters
poe	Power Over Ethernet.
port-security	Enable/disable port security globally.
privilege	Command privilege parameters
qos	Quality of Service
radius-server	Configure RADIUS
rapid-ring	Set Rapid Ring's configurations
rmon	Remote Monitoring
sflow	Statistics flow.
smtp	Set email information
snmp-server	Set SNMP server's configurations
spanning-tree	Spanning Tree protocol
system	Set Board Configuration
tacacs-server	Configure TACACS+
upnp	Set UPnP's configurations
username	Establish User Name Authentication
vlan	VLAN commands
voice	Voice appliance attributes
web	Web

## power

Configure redundant power and power boost modes.

### Syntax

**Power { Redundant | Boost }**

#### Parameters (SM24TBT2DPA)

**Redundant:** Only provide Primary Power Supply up to 820W when two power supply modules are installed. If one power supply crashes, it can still provide enough power for system operation and also PD's operation. This is the default.

**Boost:** Provide Primary Power Supply up to 1640W when two power supply modules are installed. When the application total PDs' power use is over 820W, if one power supply crashes, system will be automatically rebooted due to power loading influence. After the switch finishes rebooting, it will only provide 820W to PDs.

#### Parameters (SM24TBT2DPB)

**Redundant:** Only provide Primary Power Supply up to 820W when two power supply modules are installed. If one power supply crashes, it can still provide enough power for system operation and also PD's operation. This is the default.

**Boost:** Provide Primary Power Supply up to 1640W when two power supply modules are installed. When the application total PDs' power use is over 820W, if one power supply crashes, system will be automatically rebooted due to power loading influence. After the switch finishes rebooting, it will only provide 820W to PDs.

**EXAMPLE 1:** SM24TBT2DPA with one PSU-820 power supply installed:

```
SM24TBT2DPA(config)# power boost
SM24TBT2DPA(config)# do show power management
Power Management
=====
Power : A      B
Detected PSU : PSU-820  None
Power Good : Good   Fail
FAN Speed (RPM) : 8892  0
Temperature (Degree C) : 31   0
Operating Mode : Boost

SM24TBT2DPA(config)# power Redundant
SM24TBT2DPA(config)# do show power management
Power Management
```

```
=====
Power : A      B
Detected PSU : PSU-820 None
Power Good : Good Fail
FAN Speed (RPM) : 8892 0
Temperature (Degree C) : 30 0
Operating Mode : Redundant
SM24TBT2DPA(config)#
```

**EXAMPLE 2:** SM24TBT2DPA with two PSU-820 power supplies installed:

```
SM24TBT2DPA# show power management
```

Power Management

```
=====
Power : A      B
Detected PSU : PSU-820 PSU-820
Power Good : Good Good
FAN Speed (RPM) : 8898 8867
Temperature (Degree C) : 31 27
Operating Mode : Boost
SM24TBT2DPA#
```

```
SM24TBT2DPA# show power management
```

Power Management

```
=====
Power : A      B
Detected PSU : PSU-820 PSU-820
Power Good : Good Good
FAN Speed (RPM) : 8885 8867
Temperature (Degree C) : 30 27
Operating Mode : Boost
SM24TBT2DPA#
```

**EXAMPLE 3:** SM24TBT2DPB with one PSU-HV power supply installed:

```
SM24TBT2DPB# show power management

Power Management
=====
Power : A      B
Detected PSU : PSU-HV  PSU-HV
Power Good : Fail   Good
Power Input(AC/DC) : ---  AC
Power Input Voltage (V) : 0    121
FAN Speed (RPM) : 0     4844
Temperature (Degree C) : 28   47
Operating Mode : Boost
SM24TBT2DPB#
```

**EXAMPLE 4:** SM24TBT2DPB with two PSU-HV power supplies installed:

```
SM24TBT2DPB# show power management

Power Management
=====
Power : A      B
Detected PSU : PSU-HV  PSU-HV
Power Good : Good   Good
Power Input(AC/DC) : AC    AC
Power Input Voltage (V) : 121  121
FAN Speed (RPM) : 2920  4710
Temperature (Degree C) : 32   52
Operating Mode : Boost
SM24TBT2DPB#
```

### 3-1 Power Module Monitoring Change

SM24TBT2DPB FW VB6.64.0079 changed the way that switch power supplies are monitored:

1. When the system is turned on and the switch finds that Power A and B are different PSUs, the management software will turn off 920W PSU output power.
2. When the system has just one PSU working, and then insert a second PSU is inserted into a power slot, if the second PSU inserted is a different than the existing PSU, the second PSU inserted will have its output power turned off.
3. When Power A and B are different PSUs, the PoE Power Budget will maintain the status quo and will not be recalculated and adjusted.
4. When Power A and B are different, then the power module Event Log/Trap are different for Power A and Power B.

## terminal

Configure from the terminal (Config) mode. Enter Config mode from Exec mode.

**Syntax** **configure terminal <cr>**

### EXAMPLE

```
SM24TBT2DPA# configure terminal
SM24TBT2DPA(config)#
```

## aaa

Configure Authentication, Authorization and Accounting. **Note:** at FW vB6.64.0062 the default is HTTPS, and HTTP is redirected to HTTPS. Also, SSH is always enabled, the Telnet default is disabled, and you are given the option to enable Telnet.

### SYNTAX

```
aaa authentication login { http } { { redirect | local | radius | tacacs } [ { redirect | local | radius | tacacs } [ { redirect | local | radius | tacacs } [ { redirect | local | radius | tacacs } ] ] ] }
```

### Parameters

<b>authentication</b>	Authentication
<b>login</b>	Login
<b>console</b>	Configure Console
<b>http</b>	Configure HTTP
<b>https</b>	Configure HTTPS
<b>ssh</b>	Configure SSH
<b>telnet</b>	Configure Telnet
<b>local</b>	Use local database for authentication
<b>radius</b>	Use RADIUS for authentication
<b>tacacs</b>	Use TACACS+ for authentication

### EXAMPLE

```
SM24TBT2DPA(config)# aaa authentication login http radius
SM24TBT2DPB(config)# aaa authentication login https local
SM24TBT2DPB(config)# aaa authentication login https radius radius radius
SM24TBT2DPB(config)# aaa authentication login console local tacacs
SM24TBT2DPB(config)# aaa authentication login ssh local radius tacacs
SM24TBT2DPB(config)#
```

## access

Configure Access management.

### SYNTAX

**access** management

**access** management <access\_id> <access\_vid> <start\_addr> [ to <end\_addr> ] { [ web ] [ snmp ] [ telnet ] | all }

### Parameters

**management** Access management configuration

**<1-16>** ID of access management entry

**<AccessVid : 1-4095>** The VLAN ID for the access management entry

**<AddrRangeStart : ipv4\_addr>** Start IPv4 address

**<AddrRangeStart : ipv6\_addr>** Start IPv6 address

**all** All services

**snmp** SNMP service

**telnet** TELNET/SSH service

**to** End address of the range

**web** Web service

**<AddrRangeEnd : ipv4\_addr>** End IPv4 address

### EXAMPLE

```
SM24TBT2DPA(config)# access management 10 3 192.168.1.1 ?
  all      All services
  snmp    SNMP service
  telnet   TELNET/SSH service
  to       End address of the range
  web     Web service
<cr>
SM24TBT2DPA(config)# access management 10 3 192.168.1.1 all
SM24TBT2DPB(config)# access management 1 100 1.2.3.4 to 1.2.3.44 telnet web
SM24TBT2DPA(config)#

```

## ***access-list***

Configure Access List parameters. See **access-list ace** and **access-list-rate** commands on page 98.

## ***aggregation***

Configure Aggregation mode.

### **SYNTAX**

```
aggregation mode { [ smac ] [ dmac ] [ ip ] [ port ] }
```

#### **Parameters**

<b>mode</b>	Traffic distribution mode
<b>dmac</b>	Destination MAC affects the distribution
<b>ip</b>	IP address affects the distribution
<b>port</b>	IP port affects the distribution
<b>smac</b>	Source MAC affects the distribution

### **EXAMPLE**

```
SM24TBT2DPA(config)# aggregation mode ip port dmac smac
SM24TBT2DPA(config)# aggregation mode dmac smac
SM24TBT2DPA(config)# do show aggregation mode
Aggregation Mode:

SMAC : Enabled
DMAC : Enabled
IP   : Disabled
Port : Disabled
SM24TBT2DPA(config)#+
```

## ***always-on-poe***

Enable Always On PoE. When enabled, during a switch warm restart, it will continue providing PoE power to the PDs. Note that it will take 75 - 80 seconds to have PoE++ power on the ports to power PDs again if the switch makes a cold restart. This "Always on PoE" command has no effect on this time.

### **SYNTAX**

**always-on-poe <cr>**

#### **Parameters**

| Output modifiers  
<cr>

### **EXAMPLE**

```
SM24TBT2DPA(config)# always-on-poe
Always On PoE Status : Enable
SM24TBT2DPA(config)# always-on-poe
Always On PoE Status : Enable
SM24TBT2DPA(config)#+
```

## ***banner***

Define a login banner

### **SYNTAX**

**banner [ motd ] <banner>**  
**banner exec <banner>**  
**banner login <banner>**

#### **Parameters**

**<LINE>** c banner-text c, where 'c' is a delimiting character  
**exec** Set EXEC process creation banner  
**login** Set login banner  
**motd** Set Message of the Day banner

### **EXAMPLE**

```
SM24TBT2DPA(config)# banner exec LINE
Enter TEXT message. End with the character 'L'.
L
SM24TBT2DPA(config)#+
```

## clock

Configure time-of-day clock.

### SYNTAX

```
clock set <icliDateWord> { <icliTimeWord24> | <icliTimeWord12> { AM | PM } }

clock summer-time <word16> date [ <start_month_var> <start_date_var> <start_year_var> <start_hour_var>
<end_month_var> <end_date_var> <end_year_var> <end_hour_var> [ <offset_var> ] ]

clock summer-time <word16> recurring [ <start_week_var> <start_day_var> <start_month_var>
<start_hour_var> <end_week_var> <end_day_var> <end_month_var> <end_hour_var> [ <offset_var> ] ]

clock timezone <word_var> <hour_var> [ <minute_var> ]
```

### Parameters

<b>set</b>	set clock
<b>summer-time</b>	Configure summer (daylight savings) time
<b>timezone</b>	Configure time zone
<b>&lt;date&gt;</b>	yyyy/mm/dd
<b>&lt;time&gt;</b>	hh:mm:ss
<b>&lt;2000-2097&gt;</b>	Year to start
<b>hh:mm</b>	Time to start (hh:mm)
<b>&lt;1-12&gt;</b>	Month to end
<b>&lt;1-31&gt;</b>	Date to end
<b>&lt;2000-2097&gt;</b>	Year to end
<b>hh:mm</b>	Time to end (hh:mm)
<b>&lt;1-1440&gt;</b>	Offset to add in minutes
<b>&lt;1-5&gt;</b>	Week number to start
<b>&lt;1-7&gt;</b>	Weekday to start
<b>&lt;1-12&gt;</b>	Month to start
<b>WORD</b>	name of time zone in summer
<b>WORD</b>	name of time zone
<b>&lt;-23-23&gt;</b>	Hours offset from UTC
<b>&lt;-59-59&gt;</b>	Minutes offset from UTC
<b>date</b>	Configure absolute summer time
<b>recurring</b>	Configure recurring summer time

### EXAMPLE

```
SM24TBT2DPA(config)# clock set 2018/02/14 2:56:00
2018-02-14T02:56:00+00:00
SM24TBT2DPA(config)# clock timezone Arizona -4 0
```

```
SM24TBT2DPA(config)# clock summer-time Azores date 6 1 2022 12:00 10 1 2022
12:0
0 60
SM24TBT2DPA(config)#
SM24TBT2DPB(config)# clock set 2022/09/07 11:52:30
System automatically stop NTP service
2022-09-07T11:52:30+00:00
SM24TBT2DPB(config)#[/pre>
```

## default

Set access list rate limiter to its defaults.

### SYNTAX

```
default access-list rate-limiter [ <rate_limiter_list> ]
```

#### Parameters

<b>access-list</b>	Access list
<b>rate-limiter</b>	Rate limiter
<b>&lt;RateLimiterId : 1-16&gt;</b>	Rate limiter ID

### EXAMPLE

```
SM24TBT2DPA(config)# default access-list rate-limiter 3
SM24TBT2DPA(config)# default access-list rate-limiter ?
<RateLimiterId : 1-16>    Rate limiter ID
<cr>
SM24TBT2DPA(config)#[/pre>
```

## dms

Enable DMS mode and set DMS controller priority. Lantronix' DMS (Device Management System) is an intelligent management tool embedded in the switch to help reduce support time, cost, and effort.

DMS operates by a “Master” switch elected from one of the switches. The Master switch automatically discovers all types of IP device information and diagnoses all cable and device status in the topology. Any member of the DMS switch can be the Master switch. **Note:** at FW v6.54.3104 the DMS mode behavior was changed to default Mode = Enabled and default Priority = Low. At FW v v6.54.3135 Controller Priority modes (high/low/mid/non) were introduced.

### SYNTAX

```
dms service-mode { disabled | enabled [ priority { high | mid | low | non } ] }
```

#### Parameters

service-mode	DMS mode
disabled	DMS mode is disabled
enabled	DMS mode is enabled
priority	DMS priority. You can choose the priority to change the DMS priority of the switch.
high	DMS priority is high priority; the switch will be the Controller (Master) switch.
low	DMS priority is low level priority.
mid	DMS priority is mid level priority.
non	DMS priority is non; the switch will never become the Controller (Master) switch.
<cr>	

#### EXAMPLE

```
SM24TBT2DPA(config)# dms service-mode enabled priority high
SM24TBT2DPA(config)# dms service-mode disabled
SM24TBT2DPA(config)# dms service-mode enabled
SM24TBT2DPA(config)#
```

**do**

Run Exec mode commands in Config mode.

**SYNTAX**

```
do <LINE>{[<LINE>]}
```

**Parameters**

<LINE>              Exec Command

**EXAMPLE**

```
SM24TBT2DPA(config)# do show vlan
VLAN  Name          Interfaces
----- 
1     default        Gi 1/1-26

SM24TBT2DPA(config)# do show ip interface brief
Vlan  Address      Method  Status
----- 
1   192.168.1.77/24  Manual   UP
SM24TBT2DPA(config)#

```

## dot1x

Configure IEEE Standard for port-based Network Access Control.

### SYNTAX

```
dot1x authentication timer inactivity <v_10_to_100000>
dot1x authentication timer re-authenticate <v_1_to_3600>
dot1x feature { [ guest-vlan ] [ radius-qos ] [ radius-vlan ] }*1
dot1x guest-vlan <value>
dot1x guest-vlan supplicant
dot1x max-reauth-req <value>
dot1x re-authentication
dot1x system-auth-control
dot1x timeout quiet-period <v_10_to_1000000>
dot1x timeout tx-period <v_1_to_65535>
```

### Parameters

<b>authentication</b>	Authentication
<b>feature</b>	Globally enables/disables a dot1x feature functionality
<b>guest-vlan</b>	Guest VLAN
<b>max-reauth-req</b>	Guest VLAN ID used when entering the Guest VLAN.
<b>re-authentication</b>	Set Re-authentication state
<b>system-auth-control</b>	Set the global NAS state
<b>timeout</b>	timeout
<b>timer</b>	timer
<b>inactivity</b>	Time in seconds between check for activity on successfully authenticated MAC addresses.
<b>re-authenticate</b>	The period between re-authentication attempts in seconds
<b>&lt;10-1000000&gt;</b>	seconds
<b>&lt;1-3600&gt;</b>	seconds
<b>guest-vlan</b>	Globally enables/disables state of guest-vlan
<b>radius-qos</b>	Globally enables/disables state of RADIUS-assigned QoS.
<b>radius-vlan</b>	Globally enables/disables state of RADIUS-assigned VLAN.
<b>&lt;1-4095&gt;</b>	The number of times a Request Identity EAPOL frame is sent without response before considering entering the Guest VLAN.
<b>supplicant</b>	The switch remembers if an EAPOL frame has been received on the port for the life-time of the port. Once the switch considers whether to enter the Guest VLAN, it will first

check if this option is enabled or disabled. If disabled (unchecked; default), the switch will only enter the Guest VLAN if an EAPOL frame has not been received on the port for the life-time of the port. If enabled (checked), the switch will consider entering the Guest VLAN even if an EAPOL frame has been received on the port for the life-time of the port.

<b>&lt;1-255&gt;</b>	number of times
<b>quiet-period</b>	Time in seconds before a MAC-address that failed authentication gets a new authentication chance.
<b>tx-period</b>	the time between EAPOL retransmissions.
<b>&lt;10-1000000&gt;</b>	seconds
<b>&lt;1-65535&gt;</b>	seconds

#### EXAMPLE

```
SM24TBT2DPA(config)# dot1x authentication timer inactivity 1000
SM24TBT2DPA(config)# dot1x feature guest-vlan radius-qos radius-vlan
SM24TBT2DPA(config)# dot1x guest-vlan 33
SM24TBT2DPA(config)# dot1x max-reauth-req 3
SM24TBT2DPA(config)# dot1x re-authentication
SM24TBT2DPA(config)# dot1x system-auth-control
SM24TBT2DPA(config)# dot1x timeout quiet-period 3000
SM24TBT2DPA(config)#

```

## **enable**

Modify enable password parameters.

### **SYNTAX**

```
enable password [ level <priv> ] <password>
enable secret { 0 | 5 } [ level <priv> ] <password>
```

### **Parameters**

<b>password</b>	Assign the privileged level clear password
<b>secret</b>	Assign the privileged level secret
<b>WORD</b>	The UNENCRYPTED (cleartext) password
<b>level</b>	Set exec level password
<b>&lt;1-15&gt;</b>	Level number
<b>0</b>	Specifies an UNENCRYPTED password will follow
<b>5</b>	Specifies an ENCRYPTED secret will follow

### **EXAMPLE**

```
SM24TBT2DPA(config)# enable password level 10 999
SM24TBT2DPB(config)# enable password level 14 admin
SM24TBT2DPA(config)# enable secret 5 level 15 ABCDabcd1234!@#$
SM24TBT2DPB(config)#
```

**event**

Configure Trap event severity level.

**SYNTAX**

```
event group { AC-Power | ACL | ACL-Log | Access-Mgmt | Auth-Failed | AUTO-SAVING | Cold-Start | Config-Info  
| Firmware-Upgrade | Import-Export | LACP | Link-Status | Login | Logout | Loop-Protect | Mgmt-IP-Change |  
Module-Change | NAS | Password-Change | Port-Security | Spanning-Tree | Warm-Start | DC-Power | Battery-P  
ower | BCS-Protection | DMS | Advanced | Dying-Gasp | Temperature | Voltage | PoE-Auto-Check | Poe-Auto-  
Power-Reset | Poe-Device-Guard | FAN | ZTU-FAIL | Surveillance | Power | SCP-Success | SCP-Fail | AGV-Car  
| Robot-Arm | PoE-PD-On | PoE-PD-Off | Over-Max-PoE-Power-Limitation | PoE-PD-Over-Current } { level <lvl>  
| syslog { enable | disable } | trap { enable | disable } | smtp { enable | disable } | ipush { enable | disable } }
```

**Parameters**

<b>Group</b>	Configure trap event severity level		
<word32> :			
ACL	ACL-Log	Access-Mgmt	Auth-Failed
Cold-Start	Config-Info	DMS	Firmware-Upgrade
Import-Export	LACP	Link-Status	Login
Logout	Loop-Protect	Mgmt-IP-Change	Module-Change
NAS	Over-Max-PoE-Power-Limitation	Password-Change	PoE-PD-Off
PoE-PD-On	PoE-PD-Over-Current	Poe-Auto-Power-Reset	Port-Security
Power	SCP-Fail	SCP-Success	Spanning-Tree
Warm-Start			
level	Severity level		
smtp	smtp mode		
syslog	syslog mode		
trap	trap mode		
<0-7>	<0> Emergency ,<1> Alert ,<2> Critical ,<3> Error ,<4> Warning,<5> Notice, <6> Information ,<7> Debug		

**EXAMPLE**

```
SM24TBT2DPA(config)# event group DMS trap enable
SM24TBT2DPA(config)# event group Auth-Failed level 3
SM24TBT2DPA(config)# event group DMS syslog enable
SM24TBT2DPA(config)#
```

***exec-timeout***

Set autologout timeout period.

**SYNTAX**

```
exec-timeout autologout { 0 | 1 | 2 | 3 | 4 | 5 | 10 | 20 | 30 | 40 | 50 | 60 }
```

**Parameters**

- 0 off (no auto-logout)
- 1 1 minute
- 10 10min (default)
- 2 2 minutes
- 20 20 minutes
- 3 3 minutes
- 30 30 minutes
- 4 4 minutes
- 40 40 minutes
- 5 5 minutes
- 50 50 minutes
- 60 60 minutes

**EXAMPLE**

```
SM24TBT2DPA(config)# exec-timeout autologout 3
SM24TBT2DPA(config)# exec-timeout autologout 60
SM24TBT2DPA(config)# exec-timeout autologout 0
SM24TBT2DPA(config)#
```

**Auto-Logout Timeout:** After you change the Auto-Logout timeout and then log out and log back in, the Auto-Logout timeout setting will be the setting saved to the start-up config file. When the Auto-Logout timeout setting is changed, it directly writes to running-config. To save the timeout change to start-up config, you must execute a save to startup-config. To examine the running-config, you can run the CLI command “show running-config” or in the Web UI just log out and log back in again. To save the timeout change into startup-config, you must do a save to startup-config and then reboot the switch.

In summary:

- When you power on the switch, it will get the settings from startup-config.
- When you logout and login (without switch reboot), the switch will get the timeout settings from startup-config.
- When you reload defaults, the switch will get the timeout settings from default-config.

For the “Save to start-up config” behavior, if you don’t save the config, when you change the timeout setting but logout, at the next login the timeout setting remains unchanged as the setting in start-up config.

If you save timeout setting to start-up config:	If you don't save timeout setting to start-up config:
When you change the timeout setting and save to startup-config (click the disc icon), the changed timeout setting will be applied to running-config and start-up config immediately.	When you change the timeout setting (without save to startup-config), the timeout change will be applied to running-config immediately.
After Logout and login, the timeout setting will be the setting saved in start-up config.	After Logout and login, the timeout setting will be the setting saved in start-up config.
After a switch reboot, the timeout setting will be the setting saved in start-up config.	After you reboot the switch, the timeout setting will be the setting saved in start-up config.

## Green-ethernet

Configure Powering down of PHYs when there is no traffic.

### SYNTAX

**green-ethernet eee optimize-for-power**

### Parameters

eee	Powering down of PHYs when there is no traffic.
optimize-for-power	Set if EEE will be optimized for least power consumption (else optimized for least traffic latency).

### EXAMPLE

```
SM24TBT2DPA(config)# green-ethernet eee ?
  optimize-for-power  Set if EEE shall be optimized for least power
                      consumption (else optimized for least traffic
                      latency).
SM24TBT2DPA(config)# green-ethernet eee optimize-for-power
SM24TBT2DPA(config)#

```

## gvrp

Configure GVRP feature

### SYNTAX

**gvrp**

**gvrp max-vlans <1-4095>**

**gvrp time { [ join-time <1-20> ] [ leave-time <60-300> ] [ leave-all-time <1000-5000> ] }\*1**

### Parameters

**max-vlans** Number of simultaneous VLANs that GVRP can control <1-4095>

**time** Configure GARP protocol timer parameters per IEEE 802.1D-2004, clause 12.11. Config gvrp timer value in units of centi seconds [cs].

**join-time** Set GARP protocol parameter JoinTime.

**leave-all-time** Set GARP protocol parameter LeaveAllTime.

**leave-time** Set GARP protocol parameter LeaveTime.

**<Jointime : 1-20>** join-time in units of centi seconds. Range is 1-20. Default is 20.

**<Leavealltime : 1000-5000>** leave-all-time in units of centi seconds. Range is 1000-5000. Default is 1000.

**<Leavetime : 60-300>** leave-time in units of centi seconds. Range is 60-300. Default is 60.

### EXAMPLE

```
SM24TBT2DPA(config)# gvrp max-vlans 333
SM24TBT2DPA(config)# gvrp time join-time 13 leave-all-time 3000 leave-time 200
SM24TBT2DPA(config)#+
```

## hostname

Set system's network name.

### SYNTAX

**hostname < WORD >**

### Parameter

**WORD** This system's network name.

### EXAMPLE

```
SM24TBT2DPA(config)# hostname abc
abc(config)#+
```

## interface

Select an interface to configure and enter Interface Config mode. See [Chapter 20. Interface Config Mode Commands](#) on page [267](#).

### SYNTAX

```
interface ( <port_type> [ <plist> ] )
```

```
interface vlan <vlist>
```

### Parameters

**<port\_type>** GigabitEthernet

**vlan** VLAN interface configurations

**<vlist>** List of VLAN interface numbers, 1-4095

**<port\_type\_list>** Port list in 1/1-24 for Gigabit Ethernet

### EXAMPLE

```
SM24TBT2DPA(config)# interface?  
    interface      Select an interface to configure  
SM24TBT2DPA(config)# interface ?  
    *              All switches or All ports  
    GigabitEthernet 1 Gigabit Ethernet Port  
    vlan           VLAN interface configurations  
SM24TBT2DPA(config)# interface GigabitEthernet 1/1-24  
SM24TBT2DPA(config-if)# interface vlan 3  
SM24TBT2DPA(config-if-vlan)# ip address dhcp

**ip verify source**  
**ip verify source translate**

#### Parameters

<b>arp</b>	Address Resolution Protocol
<b>dhcp</b>	Dynamic Host Configuration Protocol
<b>dns</b>	Domain Name System
<b>gateway</b>	Gateway address binding interface
<b>helper-address</b>	DHCP relay server
<b>http</b>	Hypertext Transfer Protocol
<b>igmp</b>	Internet Group Management Protocol
<b>link-local</b>	Link-Local address binding interface
<b>name-server</b>	Domain Name System
<b>route</b>	Add IP route
<b>routing</b>	Enable routing for IPv4 and IPv6
<b>scp</b>	Secure copy function
<b>source</b>	source command
<b>ssh</b>	Secure Shell
<b>telnet</b>	Telnet
<b>verify</b>	verify command
<b>inspection</b>	ARP inspection
<b>entry</b>	arp inspection entry
<b>interface</b>	arp inspection entry interface config
<b>&lt;port_type&gt;</b>	Port type in Fast, Giga ethernet
<b>&lt;port_type_id&gt;</b>	Port ID in the format of switch-no/port-no
<b>&lt;vlan_id&gt;</b>	Select a VLAN id to configure
<b>&lt;mac_ucast&gt;</b>	Select a MAC address to configure
<b>&lt;ipv4_ucast&gt;</b>	Select an IP Address to configure
<b>deny</b>	log denied entries
<b>permit</b>	log permitted entries
<b>all</b>	log all entries
<b>translate</b>	arp inspection translate all entries
<b>vlan</b>	arp inspection vlan setting
<b>&lt;vlan_list&gt;</b>	arp inspection vlan list
<b>relay</b>	DHCP relay agent information
<b>information</b>	DHCP information option <Option 82>
<b>option</b>	DHCP option

<b>policy</b>	Policy for handling the receiving DHCP packet already include the information option
<b>drop</b>	Drop the package when receive a DHCP message that already contains relay information
<b>keep</b>	Keep the original relay information when receive a DHCP message that already contains it
<b>replace</b>	Replace the original relay info when receive a DHCP message that already contains it
<b>snooping</b>	DHCP snooping
<b>proxy</b>	DNS proxy service
<b>secure-redirect</b>	Secure HTTP web redirection
<b>secure-server</b>	Secure HTTP web server
<b>snooping</b>	Snooping IGMP
<b>&lt;word16&gt;</b>	Profile name in 16 char's
<b>vlan</b>	IGMP VLAN
<b>ssm-range</b>	IPv4 address range of Source Specific Multicast
<b>&lt;ipv4_mcast&gt;</b>	Valid IPv4 multicast address
<b>&lt;4-32&gt;</b>	Prefix length ranges from 4 to 32
<b>unknown-flooding</b>	Flooding unregistered IPv4 multicast traffic
<b>&lt;ipv4_unicast&gt;</b>	A valid IPv4 unicast address
<b>dhcp</b>	Dynamic Host Configuration Protocol
<b>interface</b>	Select an interface to configure
<b>vlan</b>	VLAN Interface
<b>&lt;vlan_id&gt;</b>	VLAN identifier(s): VID
<b>&lt;ipv4_addr&gt;</b>	Network
<b>&lt;ipv4_netmask&gt;</b>	Netmask
<b>&lt;ipv4_addr&gt;</b>	Gateway
<b>binding</b>	ip source binding
<b>interface</b>	ip source binding entry interface config
<b>&lt;port_type&gt;</b>	* or Gigabit Ethernet
*	All switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_id&gt;</b>	Port ID in the format of switch-no/port-no, ex 1/1-24 for Gigabit Ethernet
<b>&lt;vlan_id&gt;</b>	Select a VLAN id to configure
<b>&lt;ipv4_unicast&gt;</b>	Select an IP Address to configure
<b>&lt;ipv4_netmask&gt;</b>	Select a subnet mask to configure
<b>&lt;mac_unicast&gt;</b>	Select a MAC address to configure
<b>source</b>	verify source
<b>limit</b>	limit command
<b>&lt;0-2&gt;</b>	the number of limit

<b>translate</b>	ip verify source translate all entries
<b>logging</b>	ARP inspection vlan logging mode config
<b>link-local</b>	Link-Local address binding interface
<b>ssh</b>	Regenerate ssh key
<b>telnet port</b>	Service port number
<b>server</b>	support scp server
<b>disable</b>	Set mode to scp Disable
<b>enable</b>	Set mode to scp Enable
<b>port</b>	Service port number
<b>per-port</b>	Enable DHCP server per port
<b>vlan</b>	DHCP server per port VLAN
<b>&lt;vlan_id&gt;</b>	Set DHCP server per port VLAN

**EXAMPLE 1**

```
SM24TBT2DPA(config)# ip arp inspection
SM24TBT2DPA(config)# ip dhcp relay
SM24TBT2DPA(config)# ip dns proxy
SM24TBT2DPA(config)# ip helper-address 192.168.1.1
SM24TBT2DPA(config)# ip http secure-server port 600
SM24TBT2DPA(config)# ip igmp snooping vlan 3
SM24TBT2DPA(config)# ip name-server 192.168.1.6
SM24TBT2DPA(config)# ip routing
SM24TBT2DPA(config)# ip ssh port 600
SM24TBT2DPA(config)# ip verify source translate
SM24TBT2DPA(config)# ip dhcp server per-port vlan 10
SM24TBT2DPA(config)# do show ip dhcp server

DHCP server is globally enabled.

Enabled VLANs are 1.

No VLANs are set.

DHCP server per port is enabled.

SM24TBT2DPA(config)#

```

**Message:** % Duplicate server ports : TELNET (23), SSH (22), HTTP (80), HTTPS (600)

**Message:** IP Source Guard: Translate 0 dynamic entries into static entries.

**EXAMPLE 2:** Enable the SCP (Secure Copy Protocol) feature. After that, you can use a client to download config or upload config / firmware to the switch via SCP. See the Download and Upload commands

```
SM24DP4XA(config)# ip scp server ?
  disable   Set mode to scp Disable
  enable    Set mode to scp Enable
SM24DP4XA(config)# ip scp server enable
SM24DP4XA(config)#
```

**EXAMPLE 3:** After you have enabled the SCP feature (Example 2 above), use an SCP client to download config or upload config / firmware to the switch via SCP.

Download Startup Config:

```
scp admin@192.168.1.77:config/startup.cfg admin.cfg
```

Upload Startup Config:

```
scp admin.cfg admin@192.168.1.77:config/startup.cfg
```

Upload firmware:

```
scp SM24DP4XA_v7.10.1721_201812038.imgs
admin@192.168.1.77:image/switch_firmware_upgrade
```

**SCP Application Example:** The examples below are for Windows 7 and Linux OS using the filename *startup.cfg*.

### SM24TBT2DPA

Enable scp service via console on the switch first:

```
SM24TBT2DPA# configure terminal
SM24TBT2DPA(config)# ip scp server enable
SM24TBT2DPA#
```

### Using pscp in Windows7

To download Startup Config to PC:

```
pscp.exe admin@192.168.1.77:config/startup.cfg admin.cfg
```

To upload Startup Config to switch:

```
pscp.exe admin.cfg admin@192.168.1.77:config/startup.cfg
```

### In Linux (Mint 18.3 - based on Ubuntu 16.04.1)

To download Startup Config to PC:

```
scp -T admin@192.168.1.77:config/startup.cfg admin.cfg
```

To upload Startup Config to the switch:

```
scp -T admin.cfg admin@192.168.1.77:config/startup.cfg
```

**Note:** Add the –T flag to the Linux SCP command to disable its filename match checking.

After 5 failed attempts to transfer a file via SCP that failed due to not having the –T flag in the command, the switch's SCP feature stops working until the switch is rebooted.

**EXAMPLE 4:** Upload a certificate PEM file:

```
SM24TBT2DPA(config)# ip http secure-certificate generate ?  
<cr>  
SM24TBT2DPA(config)# ip http secure-certificate upload ?  
  <url_file>    Uniform Resource Locator. It is a specific character string  
                  that constitutes a reference to a resource. Syntax:  
                  <protocol>://[<username>[:<password>]@]<host>[:<port>][/<path>  
]/<file_name>  
                  If the following special characters: space  
                  !"#$%&'()*+,/:<=>?@[\\]^`{|}~ need to be contained in the  
                  input url string, they should have percent-encoded. A valid  
                  file name is a text string drawn from alphabet (A-Z)  
SM24TBT2DPA(config)# ip http secure-certificate generate  
SM24TBT2DPA(config)#[/]
```

**EXAMPLE 5:** Regenerate an ssh key:

```
SM24TBT2DPA(config)# ip ssh keyregen  
W ssh 02:21:44 131/ssh_change_key#508: Warning: It will take some time. Please w  
ait for key generating complete...  
  
W ssh 02:22:06 131/ssh_change_key#535: Warning: RSA : Public key portion is:

```

```
SM24TBT2DPA(config)#
```

## dhcp-pool

Configure DHCP pool. Configure a DHCP address pool on a DHCP server and enter DHCP pool configuration mode. According to the DHCP pool, a DHCP server will allocate IP addresses and deliver configuration parameters to a DHCP client. See the IANA [DHCP Parameters](#) webpage or the IETF [RFC 2132](#) webpage for DHCP option parameter descriptions.

### SYNTAX

```
bootfile <bootFile>
broadcast <ip>
client-identifier { fqdn <identifier> | mac-address <mac> }
client-name <host_name>
default-router <ip> [ <ip1> [ <ip2> [ <ip3> ] ] ]
dns-server <ip> [ <ip1> [ <ip2> [ <ip3> ] ] ]
do <command>
domain-name <domain_name>
end
exit
hardware-address <mac>
help
host <ip> <subnet_mask>
lease { <day> [ <hour> [ <min> ] ] | infinite }
lighting server <ip>
netbios-name-server <ip> [ <ip1> [ <ip2> [ <ip3> ] ] ]
netbios-node-type { b-node | h-node | m-node | p-node }
netbios-scope <netbios_scope>
network <ip> <subnet_mask>
nis-domain-name <domain_name>
nis-server <ip> [ <ip1> [ <ip2> [ <ip3> ] ] ]
no <command>
ntp-server <ip> [ <ip1> [ <ip2> [ <ip3> ] ] ]
tftp-server <tftpServer>
vendor class-identifier <class_id> specific-info <hexval>
```

### Parameters

bootfile	Boot file name
broadcast	Broadcast address in use on the client's subnet
client-identifier	Client identifier

client-name	Client host name
default-router	Default routers
dns-server	DNS servers
do	To run exec commands in config mode
domain-name	Domain name
end	Go back to EXEC mode
exit	Exit from current mode
hardware-address	Client hardware address
help	Description of the interactive help system
host	Client IP address and mask
lease	Address lease time
lighting	Lighting server
netbios-name-server	NetBIOS (WINS) name servers
netbios-node-type	NetBIOS node type
netbios-scope	NetBIOS scope
network	Network number and mask
nis-domain-name	NIS domain name
nis-server	Network information servers
no	Negate a command or set its defaults
ntp-server	NTP servers
tftp-server	TFTP servers
vendor	Vendor configuration
<word128>	Boot file name
A.B.C.D	Broadcast IP address
fqdn	FQDN type of client identifier
mac-address	MAC address type of client identifier
WORD	Client host name in 32 characters
A.B.C.D	Router's IP address
<0-365>	Days
infinite	Infinite lease
<0-23>	Hours
STRING	Class identifier in 64 characters
A.B.C.D	Server's IP address
b-node	Broadcast node
h-node	Hybrid node
m-node	Mixed node

p-node	Peer-to-peer node
LINE	Netbios scope identifier, in 128 characters
A.B.C.D	Network number
A.B.C.D	Network number or Network mask in dotted-decimal notation, excluding 255.255.255.255
<word128>	NIS domain name
no	Negate a command or set its defaults
A.B.C.D	Server's IP address
class-identifier	Vendor class identifier
STRING	Class identifier in 64 characters

**EXAMPLE 1** Enter DHCP pool configuration mode and configure DHCP pool:

```
SM24TBT2DPA(config)# ip dhcp pool POOL-1
SM24TBT2DPA(config-dhcp-pool)# bootfile Bootf-1
SM24TBT2DPA(config-dhcp-pool)# client-name BOB
SM24TBT2DPA(config-dhcp-pool)# client-identifier mac-address 11-22-33-44-55-66
SM24TBT2DPA(config-dhcp-pool)# default-router 192.168.1.50
SM24TBT2DPA(config-dhcp-pool)# lease 365
SM24TBT2DPA(config-dhcp-pool)# netbios-name-server 192.168.1.66
SM24TBT2DPA(config-dhcp-pool)# netbios-node-type b-node
SM24TBT2DPA(config-dhcp-pool)# netbios-scope 123456789
SM24TBT2DPA(config-dhcp-pool)# nis-domain-name BOB
SM24TBT2DPA(config-dhcp-pool)# ntp-server 192.168.1.44
SM24TBT2DPA(config-dhcp-pool)#

```

**EXAMPLE 2** Show the configured DHCP pool:

```
SM24TBT2DPA(config-dhcp-pool)# do show ip dhcp pool
Pool Name: POOL-1
-----
Type is network
IP or IP Start is 192.168.1.30
Subnet mask or IP End is 192.168.1.200
Subnet broadcast address is -
Lease time is 365 days 0 hours 0 minutes
Default router is 192.168.1.50
Domain name is -
DNS server is -

```

```
TFTP server is -
Boot file is Bootf-1
NTP server is 192.168.1.44
Netbios name server is 192.168.1.66
Netbios node type is B node
Netbios scope identifier is 123456789
NIS domain name is BOB
NIS server is -
Vendor class information is -
Client identifier is type of MAC address that is 11:22:33:44:55:66
Hardware address is -
Client name is BOB
```

**Messages:**

% Pool pool1 does not exist.

% Pool's IP/netmask does not match interfaces' IP/netmask, or DHCP server mode isn't enabled on a correct VLAN range.

**EXAMPLE 3 Configure DHCP Pool per VLAN**

```
SM24TBT2DPA(config)#vlan 2
SM24TBT2DPA(config-vlan)# exit
SM24TBT2DPA(config)#interface GigabitEthernet 1/13-24
SM24TBT2DPA(config-if)#switchport access vlan 2
SM24TBT2DPA(config-if)#exit
SM24TBT2DPA(config)#ip dhcp pool vlan2
SM24TBT2DPA(config-dhcp-pool)#network 192.168.2.1 192.168.2.50
SM24TBT2DPA(config-dhcp-pool)#lease 1 0 0
SM24TBT2DPA(config-dhcp-pool)#interface vlan 2
SM24TBT2DPA(config-if-vlan)#ip address 192.168.2.77 255.255.255.0
SM24TBT2DPA(config-if-vlan)#ip dhcp server
```

**EXAMPLE 4 Configure IP Gateway Interface and Link-local interface**

```
SM24TBT2DPA(config)# ip gateway interface 200
VLAN ID 200 is not existed. Please create it and set its IP.
SM24TBT2DPA(config)# ip gateway interface 1
SM24TBT2DPA(config)# ip link-local interface 100
SM24TBT2DPA(config)#

```

**EXAMPLE 5 Configure DHCP option 229: Specify a lighting server available to the client.**

```
SM24TBT2DPB(config-if-vlan)#{config-dhcp-pool}# lighting server ?
A.B.C.D Server's IP address
SM24TBT2DPB(config-dhcp-pool)# lighting server 192.168.1.101
SM24TBT2DPB(config-dhcp-pool)# exit
SM24TBT2DPB(config)#

```

This feature should be enabled for any ports used for lighting nodes as it significantly reduces the delay time between when a lighting node is connected to a port and when the switch allows network communication from the lighting node to the lighting gateway.

**Note:** If multicast traffic is not allowed on your network, you can configure the network DHCP server to pass the lighting gateway server IP address in DHCP Option 229. (Added at FW v7.20.0106.)

**Specifications**

1. With the switch acting as DHCP Server, it will insert operation 229 into DHCP offer packets and DHCP ack packets.
2. After receiving DHCP discover packets, it will insert option 229 for all DHCP clients as long as the DHCP Server is configured with Option 229.
3. The option is configurable via the UI, SNMP, and CLI, and there are Help descriptions in the Web UI and CLI.
4. The code for this option is 229, and its length is 4 octets:

Code Len Address

229	4	a1	a2	a3	a4
-----	---	----	----	----	----

5. For DHCP packet content, Option 229 is inserted between the last and before option 255.

## ipmc

IPv4/IPv6 multicast configuration.

### SYNTAX

```
ipmc profile
ipmc profile <profile_name>
ipmc range <entry_name> { <v_ipv4_mcast> [ <v_ipv4_mcast_1> ] | <v_ipv6_mcast> [ <v_ipv6_mcast_1> ] }
```

### Parameters

<b>profile</b>	IPMC profile configuration
<b>range</b>	A range of IPv4/IPv6 multicast addresses for the profile
<b>&lt;word16&gt;</b>	Range entry name in 16 characters
<b>&lt;ipv4_mcast&gt;</b>	Valid IPv4 multicast address
<b>&lt;ipv6_mcast&gt;</b>	Valid IPv6 multicast address
<b>default</b>	Set a command to its defaults
<b>description</b>	Additional description about the profile in 64 char's
<b>do</b>	To run exec commands in config mode
<b>end</b>	Go back to EXEC mode
<b>exit</b>	Exit from current mode
<b>help</b>	Description of the interactive help system
<b>no</b>	Negate a command or set its defaults
<b>range</b>	A range of IPv4/IPv6 multicast addresses for the profile
<b>&lt;EntryName : word16&gt;</b>	Range entry name in 16 char's
<b>deny</b>	Deny matching addresses
<b>permit</b>	Permit matching addresses
<b>log</b>	Log when matching
<b>next</b>	Specify next entry used in profile; Default: Add entry last
<b>&lt;NextEntry : word16&gt;</b>	Range entry name in 16 char's
<b>&lt;ProfileDesc : line64&gt;</b>	Description for the designated IPMC filtering profile

### EXAMPLE

```
SM24TBT2DPA (config)# ipmc profile test
SM24TBT2DPA(config-ipmc-profile)# range IpmcProf-1 deny log next RngEntry-1
% Invalid range name IpmcProf-1.

SM24TBT2DPA(config-ipmc-profile)#

```

## ipv6

IPv6 configuration commands.

### SYNTAX

```
ipv6 mld host-proxy [ leave-proxy ]
ipv6 mld snooping
ipv6 mld snooping vlan <v_vlan_list>
ipv6 mld ssm-range <v_ipv6_mcast> <ipv6_prefix_length>
ipv6 mld unknown-flooding
ipv6 route <v_ipv6_subnet> { <v_ipv6_unicast> | interface vlan <v_vlan_id> <v_ipv6_addr> }
```

### Parameters

<b>mld</b>	Multicast Listener Discovery
<b>route</b>	Configure static routes
<b>host-proxy</b>	MLD proxy configuration
<b>snooping</b>	Snooping MLD
<b>ssm-range</b>	IPv6 address range of Source Specific Multicast
<b>unknown-flooding</b>	Flooding unregistered IPv6 multicast traffic
<b>leave-proxy</b>	MLD proxy for leave configuration
<b>vlan</b>	MLD VLAN
<b>&lt;vlan_list&gt;</b>	VLAN identifier(s): VID
<b>&lt;ipv6_mcast&gt;</b>	Valid IPv6 multicast address
<b>X:X:X::X/&lt;0-128&gt;</b>	IPv6 prefix x:x::y/z

### EXAMPLE

```
SM24TBT2DPA(config)# ipv6 mld host-proxy leave-proxy
SM24TBT2DPA (config)# ipv6 mld snooping vlan 1
SM24TBT2DPA(config)# ipv6 route 222:222::24/1 interface vlan 20 FE80::22:3:4
% Failed to add IPv6 route.
SM24TBT2DPA(config)#+
```

## **lacp**

Configure LACP settings.

### **SYNTAX**

```
lacp system-priority <1-65535>
```

### **Parameters**

**system-priority** System priority

**<1-65535>** Priority value, lower means higher priority

### **EXAMPLE**

```
SM24TBT2DPA(config)# lacp system-priority 333
```

```
SM24TBT2DPA (config)#
```

## **line**

Configure a terminal line.

### **SYNTAX**

```
line { <0~16> | console 0 | vty <0~15> }
```

### **Parameters**

**<0~16>** List of line numbers

**console** Console terminal line

**0** Console Line number

**vty** Virtual terminal

**<0~15>** List of vty numbers

### **EXAMPLE**

```
SM24TBT2DPA (config)# line console 0
```

```
SM24TBT2DPA (config-line)#
```

## **lldp**

Configure LLDP and LLDP-MED parameters. **LLDP** is an IEEE 802.1ab standard protocol. The Link Layer Discovery Protocol (LLDP) specified in this standard allows stations attached to an IEEE 802 LAN to advertise, to other stations attached to the same IEEE 802 LAN, the major capabilities provided by the system incorporating that station. **LLDP-MED** is an extension of IEEE 802.1ab and is defined by the telecommunication industry association (TIA-1057).

### **SYNTAX**

```
lldp holdtime <2-10>
lldp med datum { wgs84 | nad83_navd88 | nad83_mllw }

7> ] [ dscp <0-63> ]
lldp reinit <1-10>
lldp timer <5-32768>
lldp transmission-delay <1-8192>
```

### **Parameters**

<b>holdtime</b>	Sets LLDP hold time (the neighbor switch will discard the LLDP information after "hold time" multiplied with "timer" seconds ).
<b>med</b>	Media Endpoint Discovery.
<b>reinit</b>	LLDP tx reinitialization delay in seconds.
<b>timer</b>	Sets LLDP TX interval (The time between each LLDP frame transmitted in seconds).
<b>transmission-delay</b>	Sets LLDP transmision-delay (the amount of time that the transmission of LLDP frames will delayed after LLDP configuration has changed) in seconds.)
<b>&lt;2-10&gt;</b>	2-10 seconds.
<b>&lt;1-10&gt;</b>	1-10 seconds.

<b>&lt;5-32768&gt;</b>	5-32768 seconds.
<b>&lt;1-8192&gt;</b>	1-8192 seconds.
<b>datum</b>	Datum (geodetic system) type.
<b>fast</b>	Number of times to repeat LLDP frame transmission at fast start.
<b>location-tlv</b>	LLDP-MED Location Type Length Value parameter.
<b>media-vlan-policy</b>	Use the media-vlan-policy to create a policy, which can be assigned to an interface.
<b>nad83_mllw</b>	Mean lower low water datum 1983
<b>nad83_navd88</b>	North American vertical datum 1983
<b>wgs84</b>	World Geodetic System 1984
<b>altitude</b>	Altitude parameter
<b>meter</b>	Altitude value
<b>floors</b>	Altitude value
<b>civic-addr</b>	Civic address information and postal information
<b>country</b>	The two-letter ISO 3166 country code in capital ASCII letters – e.g.,: DK, DE or US.
<b>state</b>	National subdivisions (state, canton, region, province, prefecture).
<b>county</b>	County, parish, gun (Japan), district.
<b>city</b>	City, township, shi (Japan) - Example: Copenhagen.
<b>district</b>	City division, borough, city district, ward, chou (Japan).
<b>block</b>	Neighbourhood, block.
<b>street</b>	Street - Example: Poppelvej.
<b>leading-street-direction</b>	Leading street direction - Example: N.
<b>trailing-street-suffix</b>	Trailing street suffix - Example: SW.
<b>street-suffix</b>	Street suffix - Example: Ave, Platz.
<b>house-no</b>	House number - Example: 21.
<b>house-no-suffix</b>	House number suffix - Example: A, 1/2.
<b>landmark</b>	Landmark or vanity address - Example: Columbia University.
<b>additional-info</b>	Additional location info - Example: South Wing.
<b>name</b>	Name (residence and office occupant) - Example: Flemming Jahn.
<b>zip-code</b>	Postal/zip code - Example: 2791.
<b>building</b>	Building (structure) - Example: Low Library.
<b>apartment</b>	Unit (Apartment, suite) - Example: Apt 42.
<b>floor</b>	Floor - Example: 4th floor.
<b>room-number</b>	Room number - Example: 450F.
<b>place-type</b>	Place type - Example: Office.
<b>postal-community-name</b>	Postal community name - Example: Leonia.
<b>p-o-box</b>	Post office box (P.O. BOX) - Example: 12345.

<b>additional-code</b>	Additional code - Example: 1320300003.
<b>&lt;string250&gt;</b>	Value for the corresponding selected civic address.
<b>elin-addr</b>	Emergency Location ID Number, (e.g. E911 and others), as defined by TIA or NENA.
<b>&lt;dword25&gt;</b>	ELIN value
<b>north</b>	Setting latitude direction to north.
<b>south</b>	Setting latitude direction to south.
<b>&lt;word8&gt;</b>	Latitude degrees (0.0000-90.0000).
<b>policy-list</b>	Assignment of policies.
<b>&lt;range_list&gt;</b>	Policies to assign to the interface.
<b>&lt;0-31&gt;</b>	Policy id for the policy which is created.
<b>voice</b>	Create a voice policy.
<b>voice-signaling</b>	Create a voice signaling policy.
<b>guest-voice-signaling</b>	Create a guest voice signaling policy.
<b>guest-voice</b>	Create a guest voice policy.
<b>softphone-voice</b>	Create a softphone voice policy.
<b>video-conferencing</b>	Create a video conferencing policy.
<b>streaming-video</b>	Create a streaming video policy.
<b>video-signaling</b>	Create a video signaling policy.
<b>tagged</b>	The policy uses tagged frames.
<b>&lt;vlan_id&gt;</b>	The VLAN the policy uses tagged frames.
<b>untagged</b>	The policy uses un-tagged frames.
<b>l2-priority</b>	Layer 2 priority.
<b>&lt;0-7&gt;</b>	Priority 0-7
<b>dscp</b>	Differentiated Services Code Point.
<b>&lt;0-63&gt;</b>	DSCP value 0-63.

#### EXAMPLE

```
SM24TBT2DPA(config)# lldp holdtime 5
SM24TBT2DPA(config)# lldp med fast 5
SM24TBT2DPA(config)# lldp reinit 3
SM24TBT2DPA(config)# lldp timer 555
SM24TBT2DPA(config)# lldp transmission-delay 333
Note: According to IEEE 802.1AB-clause 10.5.4.2 the transmission-delay must not
be larger than LLDP timer * 0.25. LLDP timer changed to 1332
SM24TBT2DPA(config)#

```

## ***logging***

Configure Syslog (system logging) parameters.

### **SYNTAX**

```
logging host { <v_ipv4_icast> | <v_word45> }
logging on
logging port <port_no>
```

### **Parameters**

<b>host</b>	host
<b>&lt;ipv4_icast&gt;</b>	IP address of the log server
<b>&lt;hostname&gt;</b>	Domain name of the log server
<b>on</b>	Enable syslog server
<b>&lt;1-65535&gt;</b>	Port number

### **EXAMPLE**

```
SM24TBT2DPA(config)# logging on
SM24TBT2DPA(config)# logging port 400
SM24TBT2DPA(config)# logging on
SM24TBT2DPA(config)# logging host BobB
SM24TBT2DPA(config)# logging host 192.168.1.30
SM24TBT2DPA(config)# logging port 514
SM24TBT2DPA(config)# do show log
Switch logging host mode is disabled
Switch logging host address is 192.168.1.30
Switch logging host port is 514
Number of entries on Switch 1:
Emerg   : 0

## loop-protect

Configure Loop protection configuration.

### SYNTAX

**loop-protect**

**loop-protect** shutdown-time <0-604800>

**loop-protect** transmit-time <1-10>

### Parameters

**shutdown-time** Loop protection shutdown time interval

**<0-604800>** Shutdown time in second

**transmit-time** Loop protection transmit time interval

**<1-10>** Transmit time in second

### EXAMPLE

```
SM24TBT2DPA(config)# loop-protect
SM24TBT2DPA(config)# loop-protect shutdown-time 333
SM24TBT2DPA(config)# loop-protect transmit-time 3
SM24TBT2DPA(config)#{
```

## mac

MAC table entries/configuration.

### SYNTAX

```
mac address-table aging-time <0,10-1000000>
mac address-table static <v_mac_addr> vlan <v_vlan_id> interface [ ( <port_type>
[ <v_port_type_list> ] ) ]
```

### Parameters

<b>address-table</b>	Mac Address Table
<b>aging-time</b>	Mac address aging time
<b>&lt;0,10-1000000&gt;</b>	Aging time in seconds, 0 disables aging
<b>static</b>	Static MAC address
<b>&lt;mac_addr&gt;</b>	48 bit MAC address: xx:xx:xx:xx:xx:xx
<b>vlan</b>	VLAN keyword
<b>&lt;vlan_id&gt;</b>	VLAN IDs 1-4095
<b>interface</b>	Select an interface to configure
<b>&lt;port_type&gt;</b>	Port type * or Gigabit Ethernet
<b>*</b>	All switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet
<b>PORT_LIST</b>	Port list in 1/1-26

### EXAMPLE

```
SM24TBT2DPA(config)# mac address-table static
SM24TBT2DPA(config)# mac address-table aging-time 3333
SM24TBT2DPA(config)# mac address-table static 11:22:33:44:55:66 vlan 100 interface
GigabitEthernet 1/3
SM24TBT2DPA(config)#{
```

## ***map-api-key***

Set Google Maps key string. You need a valid API key and a Google Cloud Platform billing account to access Google core product. If not, DMS will not be able to load Google Maps correctly. Visit the Google website below and follow the directions to get API key:

<https://developers.google.com/maps/documentation/directions/get-api-key>

### **SYNTAX**

**map-api-key <word127>**

#### **Parameters**

<word127>

map-api-key Set Google Maps key string

### **EXAMPLE**

```
SM24TBT2DPA(config)# map-api-key sedfal9mm
SM24TBT2DPA(config)# exit
SM24TBT2DPA# show map-api-key
Key    : sedfal9mm
SM24TBT2DPA#
```

***monitor***

Set monitor (mirror) configuration.

**SYNTAX**

```
monitor destination interface <port_type> <port_type_id>  
monitor source { { interface ( <port_type> [ <v_port_type_list> ] ) } | { cpu [ <cpu_switch_range> ] } }  
{ both | rx | tx }
```

**Parameters**

<b>destination</b>	The destination port. That is the port that traffic should be mirrored to.
<b>interface</b>	Interface to mirror traffic to.
<b>source</b>	The source port(s). That is the source port to be mirrored to the destination port.
<b>interface</b>	Mirror interface traffic.
<b>&lt;port_type&gt;</b>	1 Gigabit Ethernet port
*	All switches or all ports.
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-26.
<b>cpu</b>	Mirror CPU traffic.
<b>both</b>	Setting source port to both will mirror both ingress and egress traffic.
<b>rx</b>	Setting source port to rx will mirror both ingress traffic.
<b>tx</b>	Setting source port to tx will mirror both egress traffic.
GigabitEthernet	1 Gigabit Ethernet Port
<b>&lt;port_type&gt;</b>	Port type in Gigabit Ethernet
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-26 for Gigabit Ethernet
<b>&lt;port_type_id&gt;</b>	Port ID in 1/1-26

**EXAMPLE**

```
SM24TBT2DPA(config)# monitor source cpu both  
SM24TBT2DPA(config)# monitor destination interface GigabitEthernet 1/25  
SM24TBT2DPA(config)# monitor destination interface GigabitEthernet 1/4  
SM24TBT2DPA(config)#
```

**mvr**

Multicast VLAN Registration configuration.

**SYNTAX**

```
mvr  
mvr name <mvr_name> channel <profile_name>  
mvr name <mvr_name> frame priority <cos_priority>  
mvr name <mvr_name> frame tagged  
mvr name <mvr_name> igmp-address <v_ipv4_unicast>  
mvr name <mvr_name> last-member-query-interval <ipmc_lmqi>  
mvr name <mvr_name> mode { dynamic | compatible }  
mvr vlan <v_vlan_list> [ name <mvr_name> ]  
mvr vlan <v_vlan_list> channel <profile_name>  
mvr vlan <v_vlan_list> frame priority <cos_priority>  
mvr vlan <v_vlan_list> frame tagged  
mvr vlan <v_vlan_list> igmp-address <v_ipv4_unicast>  
mvr vlan <v_vlan_list> last-member-query-interval <ipmc_lmqi>  
mvr vlan <v_vlan_list> mode { dynamic | compatible }
```

**Parameters**

<b>name</b>	MVR multicast name
<b>&lt;word16&gt;</b>	MVR multicast VLAN name
<b>channel</b>	MVR channel configuration
<b>&lt;word16&gt;</b>	Profile name in 16 char's
<b>frame</b>	MVR control frame in TX
<b>priority</b>	Interface CoS priority
<b>&lt;0-7&gt;</b>	CoS priority ranges from 0 to 7
<b>tagged</b>	Tagged IGMP/MLD frames will be sent
<b>igmp-address</b>	MVR address configuration used in IGMP
<b>&lt;ip4_unicast&gt;</b>	A valid IPv4 unicast address MVR multicast VLAN name
<b>last-member-query-interval</b>	Last Member Query Interval in tenths of seconds
<b>&lt;0-31744&gt;</b>	0 - 31744 tenths of seconds
<b>mode</b>	MVR mode of operation
<b>dynamic</b>	Dynamic MVR operation mode
<b>compatible</b>	Compatible MVR operation mode
<b>vlan</b>	MVR multicast vlan
<b>&lt;vlan_list&gt;</b>	MVR multicast VLAN list

<b>channel</b>	MVR channel configuration
<b>&lt;word16&gt;</b>	Profile name in 16 char's
<b>frame</b>	MVR control frame in TX
<b>priority</b>	Interface CoS priority
<b>&lt;0-7&gt;</b>	CoS priority ranges from 0 to 7
<b>igmp-address</b>	MVR address configuration used in IGMP
<b>&lt;ipv4_unicast&gt;</b>	A valid IPv4 unicast address
<b>last-member-query-interval</b>	Last Member Query Interval in tenths of seconds
<b>&lt;0-31744&gt;</b>	0 - 31744 tenths of seconds
<b>compatible</b>	Compatible MVR operation mode

**EXAMPLE**

```
SM24TBT2DPA(config)# mvr vlan 10 mode dynamic
SM24TBT2DPA(config)# mvr
SM24TBT2DPA(config)# mvr name MVRvid1 channel Prof1
% Invalid operation.
% Failed to set MVR interface channel.
SM24TBT2DPA(config)# do show mvr
MVR is now enabled to start group registration.
Switch-1 MVR-IGMP Interface Status
IGMP MVR VLAN 10 (Name is MCVID10) interface is enabled.

## ntp

Configure Network Timing Protocol.

### SYNTAX

```
ntp
ntp automatic
ntp interval <interval>
ntp server <index_var> ip-address { <ipv4_var> | <ipv6_var> | <name_var> }
```

### Parameters

<b>automatic</b>	Enabled: NTP servers from the DHCP. Disabled: NTP servers from the config.
<b>interval</b>	Configure NTP Time-Sync Interval
<b>server</b>	Configure NTP server
<b>&lt;1-5&gt;</b>	index number
<b>ip-address</b>	ip address
<b>&lt;ipv4_icast&gt;</b>	ipv4 address
<b>&lt;ipv6_icast&gt;</b>	ipv6 address
<b>&lt;hostname&gt;</b>	domain name
<b>&lt;5,10,15,30,60,120&gt;</b>	NTP interval in seconds

### EXAMPLE

```
SM24TBT2DPA(config)# ntp server 3 ip-address 192.168.1.1
SM24TBT2DPA(config)# ntp automatic
SM24TBT2DPA(config)# ntp interval 15
SM24TBT2DPA(config)# do show ntp status
NTP Mode : disabled
Automatic: enabled
Idx   Server IP host address (a.b.c.d)

```

## **percepxion**

Percepxion configuration. Percepxion is Lantronix's on-premise and cloud-hosted management software that provides centralized management and automated monitoring of deployed Lantronix devices.

### **SYNTAX**

```
active connection connection <number>
apply configuration updates disable
apply configuration updates enable
apply firmware updates disable
apply firmware updates enable
connection <con> connect to cloud
connection <con> connect to on premise
connection <con> host <host_name>
connection <con> port <number>
connection <con> secure port disable
connection <con> secure port enable
connection <con> validate certificates disable
connection <con> validate certificates enable
content check interval <hours>
device description <device_desp>
device id <device_id>
device key <device_key>
device name <device_name>
do <command>
end
exit
help
no device description
no device id
no device key
no device name
show
show connection <con>
show statistics
state disable
```

state enable  
status update interval <minutes>

**Parameters**

active	Sets active connection to Connection <number>
apply	Sets the mode on firmware updates
connection	Sets the connection 1 or connection 2
content	Sets the firmware and configuration check interval
device	Sets the Device ID
do	To run exec commands in config mode
end	Go back to EXEC mode
exit	Exit from current mode
help	Description of the interactive help system
no	Removes parameters (device description, device id, device key, device name)
show	Displays the current configuration
state	<b>Consoleflow Percepexion state</b>
status	Sets the status update interval
connection	Sets active connection to Connection <number>
<1-2>	Sets active connection to Connection <number>
configuration	Sets the action on configuration updates
firmware	Sets the mode on firmware updates
updates	Sets the action on configuration updates
disable	Sets the action on configuration updates to disable
enable	Sets the action on configuration updates to enable
updates	Sets the mode on firmware updates
disable	Restores the default action on new firmware (do not apply)
enable	Automatically apply new firmware
<1-2>	Sets the connection 1 or connection 2
connect	<b>Sets the mode to connect</b>
to	<b>Sets the mode to connect</b>
cloud	<b>Sets the cloud mode to connect</b>
on	<b>Sets the on premise mode to connect</b>
host	Sets the Hostname or IP address of Percepexion
port	Sets the Port of Percepexion
secure	Sets the mode on HTTPS
validate	Sets the mode on certificate validation
<word256>	Sets the Hostname or IP address of Percepexion

<1-65535> Sets the Port of Percepexion  
port Sets the mode on HTTPS  
disable Disables HTTPS for Percepexion client  
enable Enables HTTPS for Percepexion client  
certificates Sets the mode on certificate validation  
disable Disables certificate validation for Percepexion client  
enable Enables certificate validation for Percepexion client  
check Sets the firmware and configuration check interval  
interval Sets the firmware and configuration check interval  
<1-56160> Sets the firmware and configuration check interval  
description Sets the Device Description  
id Sets the Device ID  
key Sets the Device Key  
name Sets the Device Name  
<word256> Sets the Device Description  
<word32> Sets the Device ID  
<word32> Sets the Device Key  
<word256> Sets the Device Name  
no device description  
no device id  
no device key  
no device name  
connection Shows the connection 1 or connection 2  
statistics Displays the Percepexion statistics  
disable Disables the Percepexion client  
enable Enables the Percepexion client  
update Sets the status update interval  
interval Sets the status update interval  
<1-1440> Sets the status update interval

**EXAMPLE 1**

```

<min_v61_0_to_55> ] }

poe reboot-chip mode { enable | disable }

poe reboot-chip { [ Sun <hour_v00_0_to_23> <min_v00_0_to_55> ] [ Mon <hour_v10_0_to_23>
<min_v10_0_to_55> ] [ Tue <hour_v20_0_to_23> <min_v20_0_to_55> ] [ Wed <hour_v30_0_to_23>
<min_v30_0_to_55> ] [ Thr <hour_v40_0_to_23> <min_v40_0_to_55> ] [ Fri <hour_v50_0_to_23>
<min_v50_0_to_55> ] [ Sat <hour_v60_0_to_23> <min_v60_0_to_55> ] }
```

### Parameters

<b>ping-check</b>	Enable/Disable POE Ping Check (PoE Auto Power Reset). Specify the auto detection parameters to check the link status between PoE ports and PDs. If it detects a connection failure, it will reboot remote PD automatically.
<b>profile</b>	poe scheduling profile
<b>reboot-chip</b>	poe schedules to reboot PoE chip
<b>disable</b>	Disable POE Ping Check.
<b>enable</b>	Enable POE Ping Check.
<b>id</b>	poe scheduling profile id
<b>&lt;profileId : 1-16&gt;</b>	poe scheduling profile id, from 1 to 16
<b>Fri</b>	Configure PoE Power scheduling on Friday
<b>Mon</b>	Configure PoE Power scheduling on Monday
<b>Sat</b>	Configure PoE Power scheduling on Saturday
<b>Sun</b>	Configure PoE Power scheduling on Sunday
<b>Thr</b>	Configure PoE Power scheduling on Thursday
<b>Tue</b>	Configure PoE Power scheduling on Tuesday

Wed	Configure PoE Power scheduling on Wednesday
name	poe scheduling profile name, the name length is 32
<v_hour : 0-23>	start hour
<v_minute : 0-55>	start minute, value must be multiples of 5
<v_hour : 0-23>	end hour
<v_minute : 0-55>	end minute, value must be multiples of 5
Fri	Configure PoE Reboot scheduling on Friday
Mon	Configure PoE Reboot scheduling on Monday
Sat	Configure PoE Reboot scheduling on Saturday
Sun	Configure PoE Reboot scheduling on Sunday
Thr	Configure PoE Reboot scheduling on Thursday
Tue	Configure PoE Reboot scheduling on Tuesday
Wed	Configure PoE Reboot scheduling on Wednesday
mode	Configure poe reboot mode

**EXAMPLE**

```
SM24TBT2DPA(config)# poe ping-check enable
SM24TBT2DPB(config)# poe reboot-chip Fri 1 30
SM24TBT2DPB(config)# poe profile id 1 Sun 23 30 23 55
SM24TBT2DPB(config)#
```

**Message:** W poe 19:55:52 41/poe\_send\_ping\_check#2985: Warning: The ping ip adress has no same ip domain.

Recovery: Make sure the PoE Auto Power Reset “ping-ip-addr” parameter (in Interface Config mode) isn’t entered twice.

**Note:** For FW VB6.64.0069 and above, on PoE schedule request, if "Start Time" is equal to "End Time", the switch will immediately reset PoE power on the selected ports. So if you configure Start Time 23:00 (Monday) and End Time 23:00 (Monday) on Profile 1, and Profile 1 is configured for port 1, at 23:00 on each Monday, port 1 will immediately reset PoE power.

## **port-security**

Enable/disable and configure port security globally.

### **SYNTAX**

**port-security**

**port-security aging**

**port-security aging time <v\_10\_to\_10000000>**

### **Parameters**

**aging** Time in seconds between check for activity on learned MAC addresses.

**time** Time in seconds between check for activity on learned MAC addresses.

**<10-10000000>** seconds

### **EXAMPLE**

```
SM24TBT2DPA(config)# port-security
SM24TBT2DPA(config)# port-security aging
SM24TBT2DPA(config)# port-security aging time 1000
SM24TBT2DPA(config)#{
```

## power

Set Power operating mode.

### SYNTAX

```
power { Redundant | Boost }
```

### Parameters

Boost      Boost Mode

Redundant    Redundant Mode

### EXAMPLE

```
SM24TBT2DPB(config)# Power Boost
SM24TBT2DPB(config)# do show power management
Power Management
=====
Power : A      B
Detected PSU : PSU-HV    PSU-HV
Power Good : Good    Fail
Power Input(AC/DC) : AC    ---
Power Input Voltage (V) : 120    0
FAN Speed (RPM) : 4690    0
Temperature (Degree C) : 44    27
Operating Mode : Boost
SM24TBT2DPB(config)# power Redundant
SM24TBT2DPB(config)# do show power management
Power Management
=====
Power : A      B
Detected PSU : PSU-HV    PSU-HV
Power Good : Good    Fail
Power Input(AC/DC) : AC    ---
Power Input Voltage (V) : 119    0
FAN Speed (RPM) : 4665    0
Temperature (Degree C) : 43    25
Operating Mode : Redundant
SM24TBT2DPB(config)#

```

## privilege

Configure command privilege parameters.

### SYNTAX

```
privilege { exec | configure | config-vlan | line | interface | if-vlan | ipmc-profile | snmps-host | stp-aggr | dhcp-pool | rfc2544-profile } level <privilege> <cmd>
```

#### Parameters

<b>config-vlan</b>	VLAN Configuration Mode
<b>configure</b>	Global configuration mode
<b>dhcp-pool</b>	DHCP Pool Configuration Mode
<b>exec</b>	Exec mode
<b>if-vlan</b>	VLAN Interface Mode
<b>interface</b>	Port List Interface Mode
<b>ipmc-profile</b>	IPMC Profile Mode
<b>line</b>	Line configuration mode
<b>rfc2544-profile</b>	RFC2544 Profile Mode
<b>snmps-host</b>	SNMP Server Host Mode
<b>stp-aggr</b>	STP Aggregation Mode
<b>level</b>	Set privilege level of command
<b>&lt;0-15&gt;</b>	Privilege level
<b>&lt;LINE&gt;</b>	Initial valid words and literals of the command to modify, in 128 characters

### EXAMPLE

```
SM24TBT2DPA(config)# privilege config-vlan level 10 LINE
SM24TBT2DPA(config)# privilege configure level 10 LINE
SM24TBT2DPA(config)# privilege dhcp-pool level 10 LINE
SM24TBT2DPA(config)#

```

## qos

Configure Quality of Service parameters. See “[QoS Commands](#)” on page [139](#).

## **radius-server**

Configure RADIUS.

### **SYNTAX**

```
radius-server attribute 32 <line1-253>
radius-server attribute 4 <ipv4_unicast>
radius-server attribute 95 <ipv6_unicast>
radius-server deadtime <1-1440>
radius-server host <host_name> [ auth-port <auth_port> ] [ acct-port <acct_port> ] [ timeout <seconds> ]
[ retransmit <retries> ] [ key { [ unencrypted ] <unencrypted_key> | encrypted <encrypted_key> } ]
radius-server key { [ unencrypted ] <unencrypted_key> | encrypted <encrypted_key> }
radius-server retransmit <1-1000>
radius-server timeout <1-1000>
```

### **Parameters**

<b>attribute</b>	Radius-server attribute (32, 4, or 95)
<b>deadtime</b>	Time to stop using a RADIUS server that doesn't respond
<b>host</b>	Specify a RADIUS server
<b>key</b>	Set RADIUS encryption key (the shared key)
<b>retransmit</b>	Specify the number of retries to active server
<b>timeout</b>	Time to wait for a RADIUS server to reply
<b>&lt;Minutes : 1-1440&gt;</b>	Time in minutes
<b>&lt;Host4 : ipv4_unicast&gt;</b>	IPv4 address
<b>&lt;Host6 : ipv6_unicast&gt;</b>	IPv6 address
<b>&lt;HostName : word1-255&gt;</b>	Hostname or IP address
<b>acct-port</b>	UDP port for RADIUS accounting server
<b>auth-port</b>	UDP port for RADIUS authentication server
<b>key</b>	Server specific key (overrides default)
<b>retransmit</b>	Specify the number of retries to active server (overrides default)
<b>timeout</b>	Time to wait for this RADIUS server to reply (overrides default)
<b>&lt;AuthPort : 0-65535&gt;</b>	UDP port number
<b>&lt;AcctPort : 0-65535&gt;</b>	UDP port number
<b>&lt;Seconds : 1-1000&gt;</b>	Wait time in seconds
<b>&lt;Key : line1-63&gt;</b>	The shared key
<b>&lt;Retries : 1-1000&gt;</b>	Number of retries for a transaction
<b>attribute</b>	Radius-server attribute (32, 4, or 95)

32	Radius-server attribute 32 (NAS-Identifier): The identifier - up to 253 characters long - to be used as attribute 32 in RADIUS Access-Request packets. If this field is left blank, the NAS-Identifier is not included in the packet.
4	Radius-server attribute 4 (NAS-IP-Address): The IPv4 address to be used as attribute 4 in RADIUS Access-Request packets. If this field is left blank, the IP address of the outgoing interface is used.
95	Radius-server attribute 95 (NAS-IPv6-Address): The IPv6 address to be used as attribute 95 in RADIUS Access-Request packets. If this field is left blank, the IP address of the outgoing interface is used.
<Id : line1-253>	Radius-server attribute
<Key : word1-63>	The UNENCRYPTED (Plain Text) secret key. Notice that you have no chance to get the Plain Text secret key after this command. The system will always display the ENCRYPTED password.
<b>encrypted</b>	Specifies an ENCRYPTED secret key will follow
<b>unencrypted</b>	Specifies an UNENCRYPTED secret key will follow
<Key : word96-224>	The ENCRYPTED (hidden) secret key. Notice the ENCRYPTED secret key will be decoded by system internally. You cannot directly use it as same as the Plain Text and it is not human-readable text normally.
<Ipv4 : ipv4_unicast>	radius-server attribute 4 IP address
<Ipv6 : ipv6_unicast>	radius-server attribute 95 IP address

#### EXAMPLE

```
SM24TBT2DPA(config)# radius-server host device key 12
SM24TBT2DPB(config)# radius-server key admin
SM24TBT2DPB(config)# radius-server attribute 32 radsrvrline
SM24TBT2DPB(config)# radius-server deadtime 90
SM24TBT2DPB(config)# radius-server key unencrypted admin!@#123
SM24TBT2DPB(config)# radius-server retransmit 450
SM24TBT2DPB(config)# radius-server timeout 400
SM24TBT2DPB(config)#
```

## rapid-ring

Set Rapid Ring parameters in Config mode. Note that other ring technologies (e.g., STP) must be disabled.

### SYNTAX

**rapid-ring** role disabled

**rapid-ring** role master

**rapid-ring** role member

### Parameters

role Set role value

disabled role value disabled

master role value member

member role value master

### EXAMPLE

```
SM24TBT2DPA(config)# do show rapid-ring
Entry Index          : 1
Rapid Ring Role     : Disabled
Rapid Ring Port 1   : 25
Rapid Ring Port 2   : 26
Rapid Ring Port 1 State : Forwarding
Rapid Ring Port 2 State : Forwarding

SM24TBT2DPA(config)# rapid-ring role master
R_RING_ICLI_system_set error in port 25, STP is enable
SM24TBT2DPA(config)# rapid-ring role master
SM24TBT2DPA(config)# do show rapid-ring
Entry Index          : 1
Rapid Ring Role     : Master
Rapid Ring Port 1   : 25
Rapid Ring Port 2   : 26
Rapid Ring Port 1 State : Discarding
Rapid Ring Port 2 State : Discarding

SM24TBT2DPA(config)#
```

**Messages:** *R\_RING\_ICLI\_system\_set error in port 25, STP is enable*

**rmon**

Configure Remote Monitoring.

**SYNTAX**

```
rmon alarm <id> { ifInOctets | ifInUcastPkts | ifInNUcastPkts | ifInDiscards | ifInErrors | ifInUnknownProtos |  
ifOutOctets | ifOutUcastPkts | ifOutNUcastPkts | ifOutDiscards | ifOutErrors } <ifIndex> <interval> { absolute |  
delta } rising-threshold <rising_threshold> [ <rising_event_id> ] falling-threshold <falling_threshold>  
[ <falling_event_id> ] { [ rising | falling | both ] }  
  
rmon event <id> [ log ] [ trap <community> ] { [ description <description> ] }
```

**Parameters**

<b>alarm</b>	Configure an RMON alarm
<b>event</b>	Configure an RMON event
<b>&lt;1-65535&gt;</b>	Alarm entry ID
<b>&lt;WORD&gt;</b>	MIB object to monitor
<b>&lt;1-2147483647&gt;</b>	Sample interval
<b>absolute</b>	Test each sample directly
<b>delta</b>	Test delta between samples
<b>rising-threshold</b>	Configure the rising threshold
<b>&lt;-2147483648-2147483647&gt;</b>	rising threshold value
<b>&lt;0-65535&gt;</b>	Event to fire on rising threshold crossing
<b>falling-threshold</b>	Configure the falling threshold
<b>&lt;-2147483648-2147483647&gt;</b>	falling threshold value
<b>rising</b>	Trigger alarm when the first value is larger than the rising threshold
<b>falling</b>	Trigger alarm when the first value is less than the falling threshold
<b>both</b>	Trigger alarm when the first value is larger than the rising threshold or less than the falling threshold (default)
<b>ifInOctets</b>	The total number of octets received on the interface, including framing characters
<b>ifInUcastPkts</b>	The number of uni-cast packets delivered to a higher-layer protocol
<b>ifInNUcastPkts</b>	The number of broad-cast and multi-cast packets delivered to a higher-layer protocol
<b>ifInDiscards</b>	The number of inbound packets that are discarded even the packets are normal
<b>ifInErrors</b>	The number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol
<b>ifInUnknownProtos</b>	The number of the inbound packets that were discarded because of the unknown or un-support protocol

<b>ifOutOctets</b>	The number of octets transmitted out of the interface , including framing characters
<b>ifOutUcastPkts</b>	The number of uni-cast packets that request to transmit
<b>ifOutNUcastPkts</b>	The number of broad-cast and multi-cast packets that request to transmit
<b>ifOutDiscards</b>	The number of outbound packets that are discarded event the packets is normal
<b>ifOutErrors</b>	The number of outbound packets that could not be transmitted because of errors
<b>&lt;uint&gt;</b>	ifIndex
<b>&lt;1-2147483647&gt;</b>	Sample interval
<b>absolute</b>	Test each sample directly
<b>delta</b>	Test delta between samples
<b>rising-threshold</b>	Configure the rising threshold
<b>description</b>	Specify a description of the event
<b>log</b>	Generate RMON log when the event fires
<b>trap</b>	Generate SNMP trap when the event fires

**EXAMPLE**

```
SM24TBT2DPA(config)# rmon alarm 10000 ifInErrors 10 9999 absolute rising-thresho
ld 0 falling-threshold 0 both
% Invalid: rising threshold must be larger than falling threshold
SM24TBT2DPA(config)# rmon alarm 10000 ifInErrors 10 9999 absolute rising-thresho
ld 10 falling-threshold 0 both
SM24TBT2DPA(config)# rmon event 99
SM24TBT2DPA(config)#[/pre>
```

## sflow

Configure Statistics Flow (sFlow).

### SYNTAX

```
sflow agent-ip { ipv4 <v_ipv4_addr> | ipv6 <v_ipv6_addr> }

sflow collector-address [ receiver <rcvr_idx_list> ] [ <host_name> ]

sflow collector-port [ receiver <rcvr_idx_list> ] <collector_port>

sflow max-datatype-size [ receiver <rcvr_idx_list> ] <datatype_size>

sflow timeout [ receiver <rcvr_idx_list> ] <timeout>
```

### Parameters

<b>agent-ip</b>	The agent IP address used as agent-address in UDP datagrams. Defaults to IPv4 loopback address.
<b>collector-address</b>	Collector address; IPv4 address or IPv6 address or hostname
<b>collector-port</b>	Collector UDP port; [ receiver <rcvr_idx_list> ] <collector_port>
<b>&lt;1-65535&gt;</b>	Port Number
<b>max-datatype-size</b>	Maximum datagram size.
<b>&lt;200-1468&gt;</b>	Bytes
<b>timeout</b>	Receiver timeout measured in seconds. The switch decrements the timeout once per second, and as long as it is non-zero, the receiver receives samples. Once the timeout reaches 0, the receiver and all its configuration is reset to defaults.
<b>&lt;0-2147483647&gt;</b>	Number in seconds

### EXAMPLE

```
SM24TBT2DPA(config)# sflow agent-ip ipv4 192.168.1.2
SM24TBT2DPA(config)# sflow collector-port 3
SM24TBT2DPA(config)# sflow max-datatype-size 333
SM24TBT2DPA(config)# sflow timeout 3333
SM24TBT2DPA(config)#[/pre]

```

## **smtp**

Set email information. The function is used to set an Alarm trap when the switch detects an alarm.

You can set the SMTP server to send you the alarm via email.

### **SYNTAX**

```
smtp delete { server | username | sender | returnpath | mailaddress <index> }

smtp mailaddress <index> <mail_addr_name>

smtp returnpath <return_path>

smtp sender <sender_name>

smtp server <hostname>

smtp username <username> <password>
```

### **Parameters**

<b>delete</b>	Delete command
<b>mailaddress</b>	Configure email address
<b>returnpath</b>	Configure email returnpath
<b>sender</b>	Configure email sender
<b>server</b>	Configure email server
<b>username</b>	Configure email user name
<b>&lt;index : 1-6&gt;</b>	Email address index
<b>&lt;return_path : word47&gt;</b>	Up to 47 characters describing returnpath
<b>&lt;sender_name : word47&gt;</b>	Up to 47 characters describing sender
<b>&lt;hostname:word47&gt;</b>	Up to 47 characters describing email server
<b>&lt;Username : word31&gt;</b>	Up to 47 characters describing user name
<b>&lt;mail_addr_name : word47&gt;</b>	Up to 47 characters describing mail address
<b>&lt;UnencryptedPassword : word31&gt;</b>	Configure email password

### **EXAMPLE**

```
SM24TBT2DPA(config)# smtp mailaddress 1 BobB
SM24TBT2DPA(config)# smtp returnpath BobRetPath
SM24TBT2DPA(config)# smtp sender Author
SM24TBT2DPA(config)# smtp server Engineering
SM24TBT2DPA(config)# smtp username jeffs@lantronix.com Hazysky
SM24TBT2DPA(config)#[
```

## system

Set system configuration parameters.

### SYNTAX

```
system contact <v_line128>
system description <sys_desc>
system location <v_line128>
system name <v_line128>
system reboot mode { enable | disable }
system reboot { [ Sun <hour_v00_0_to_23> <min_v00_0_to_55> ] [ Mon <hour_v10_0_to_23>
<min_v10_0_to_55> ] [ Tue <hour_v20_0_to_23> <min_v20_0_to_55> ] [ Wed <hour_v30_0_to_23>
<min_v30_0_to_55> ] [ Thr <hour_v40_0_to_23> <min_v40_0_to_55> ] [ Fri <hour_v50_0_to_23>
<min_v50_0_to_55> ] [ Sat <hour_v60_0_to_23> <min_v60_0_to_55> ] }
```

### Parameters

<b>contact</b>	Set the SNMP server's contact string
<b>description</b>	Configure System Description
<b>location</b>	Set the SNMP server's location string
<b>name</b>	Set the SNMP server's system model name string
<b>reboot</b>	Enable/disable Switch Rebooting
<line128>	contact string
<line128>	System Description string
<line128>	location string
<line128>	name string
Fri	Configure Switch Reboot scheduling on Friday
Mon	Configure Switch Reboot scheduling on Monday
Sat	Configure Switch Reboot scheduling on Saturday
Sun	Configure Switch Reboot scheduling on Sunday
Thr	Configure Switch Reboot scheduling on Thursday
Tue	Configure Switch Reboot scheduling on Tuesday
Wed	Configure Switch Reboot scheduling on Wednesday
mode	Switch reboot mode
disable	Disable Switch Reboot
enable	Enable Switch Reboot
<v_hour : 0-23>	start hour
<v_minute : 0-55>	start minute, value must be multiples of 5

**EXAMPLE**

```
SM24TBT2DPA(config)# system contact 222
SM24TBT2DPA(config)# system location 333
SM24TBT2DPA(config)# system name GE
GE(config)# system name SM24TBT2DPB
SM24TBT2DPB(config)# system reboot mode enable
SM24TBT2DPB(config)# system reboot Fri 11 55 Sun 1 00
SM24TBT2DPB(config)#{
```

## tacacs-server

Configure TACACS+.

### SYNTAX

```
tacacs-server deadtime <minutes>
tacacs-server host <host_name> [ port <port> ] [ timeout <seconds> ] [ key { [ unencrypted ]
<unencrypted_key> | encrypted <encrypted_key> } ]
tacacs-server key { [ unencrypted ] <unencrypted_key> | encrypted <encrypted_key> }
tacacs-server timeout <seconds>
```

### Parameters

<b>deadtime</b>	Time to stop using a TACACS+ server that doesn't respond
<b>host</b>	Specify a TACACS+ server Hostname or IP address
<b>key</b>	Set TACACS+ encryption key
<b>timeout</b>	Time to wait for a TACACS+ server to reply
<b>&lt;Minutes : 1-1440&gt;</b>	Time in minutes (1-1440 minutes).
<b>&lt;Key : line1-63&gt;</b>	The shared key (1-63 characters).
<b>&lt;Seconds : 1-1000&gt;</b>	Wait time in seconds (1-1000 seconds)
<b>&lt;HostName : word1-255&gt;</b>	Hostname or IP address
<b>&lt;ipv4_ucast&gt;</b>	IPv4 address
<b>&lt;ipv6_ucast&gt;</b>	IPv6 address
<b>port</b>	TCP port for TACACS+ server
<b>&lt;0-65535&gt;</b>	TCP port number
<b>&lt;Key : word1-63&gt;</b>	The UNENCRYPTED (Plain Text) secret key. Notice that you have no chance to get the Plain Text secret key after this command. The system will always display the ENCRYPTED password.
<b>encrypted</b>	Specifies an ENCRYPTED secret key will follow
<b>unencrypted</b>	Specifies an UNENCRYPTED secret key will follow
<b>port</b>	TCP port for TACACS+ server
<b>timeout</b>	Time to wait for this TACACS+ server to reply (overrides default)

### EXAMPLE

```
SM24TBT2DPA(config)# tacacs-server deadtime 300
SM24TBT2DPA(config)# tacacs-server host 192.168.1.2
SM24TBT2DPA(config)# tacacs-server key 33
SM24TBT2DPA(config)# tacacs-server timeout 300
SM24TBT2DPA(config)# do show tacacs
Global TACACS+ Server Timeout      : 300 seconds
Global TACACS+ Server Deadtime     : 300 minutes
```

```
Global TACACS+ Server Key          : 33
TACACS+ Server #1:
  Host name   : 192.168.1.2
  Port        : 49
  Timeout     :
  Key         :

SM24TBT2DPB(config)# tacacs-server host BobB key unencrypted admin port 1767 tim
eout 111
SM24TBT2DPB(config)# tacacs-server key unencrypted admin123!@#
SM24TBT2DPB(config)# tacacs-server key encrypted admin!!!@@@##111222333
                                         ^
% Incomplete word detected at '^' marker.

SM24TBT2DPB(config)#{
```

## upnp

Set UPnP's configurations. UPnP (Universal Plug and Play) allows devices to connect seamlessly and simplifies implementation of networks in the home (data sharing, communications, entertainment) and in corporate environments. **Caution:** UPnP allows clients in the local network to automatically configure the device. UpnP should only be used (enabled) if necessary and with preventive measures as it can result in high security risks for your network.

### SYNTAX

```
upnp
upnp advertising-duration <v_66_to_86400>
upnp ttl <v_1_to_255>
```

### Parameters

**advertising-duration** Set the advertising duration. The duration, carried in SSDP packets, is used to inform a control point or control points how often it or they should receive an SSDP advertisement message from this switch. If a control point does not receive any message within the duration, it will think that the switch no longer exists. Due to the unreliable nature of UDP, in the standard it is recommended that such refreshing of advertisements to be done at less than one-half of the advertising duration. In the implementation, the switch sends SSDP messages periodically at the interval one-half of the advertising duration minus 30 seconds.

Valid values are 66 - 86400.

**ttl** Set TTL value used by UPnP to send SSDP advertisement messages.  
**<66-86400>** advertising duration  
**<1-255>** TTL value

### EXAMPLE

```
SM24TBT2DPA(config)# upnp ?
      advertising-duration    Set advertising duration
      ttl                   Set TTL value
      <cr>

SM24TBT2DPA(config)# upnp advertising-duration 88
SM24TBT2DPA(config)# upnp ttl 25
SM24TBT2DPA(config)# do show upnp
UPnP Mode          : Disabled
UPnP TTL           : 25
UPnP Advertising Duration : 88
SM24TBT2DPA(config)#
```

## **username**

Establish User Name Authentication.

### **SYNTAX**

```
username <username> privilege <priv> password encrypted <encry_password>
username <username> privilege <priv> password none
username <username> privilege <priv> password unencrypted <password>
```

### **Parameters**

<b>&lt;Username : word31&gt;</b>	User name allows letters, numbers and underscores
<b>privilege</b>	Set user privilege level
<b>&lt;privilegeLevel : 0-15&gt;</b>	User privilege level
<b>password</b>	Specify the password for the user
<b>encrypted</b>	Specifies an ENCRYPTED password will follow
<b>none</b>	NULL password
<b>unencrypted</b>	Specifies an UNENCRYPTED password will follow
<b>&lt;Password : line31&gt;</b>	The UNENCRYPTED (Plain Text) user password. Any printable characters including space is accepted.  Notice that you have no chance to get the Plain Text password after this command. The system will always display the ENCRYPTED password.
<b>&lt;Password : word4-44&gt;</b>	The ENCRYPTED (hidden) user password. Notice the ENCRYPTED password will be decoded by system internally. You cannot directly use it as same as the Plain Text and it is not human-readable text normally.

### **EXAMPLE**

```
SM24TBT2DPA(config)# username Jefferson privilege 15 password none
SM24TBT2DPB(config)# username tomason privilege 14 password encrypted BBBBBBBBBB
BBBB*****%
% The UNENCRYPTED password is not accepted
SM24TBT2DPB(config)#
```

## vlan

Configure VLAN parameters.

### SYNTAX

```
vlan <vlist>
vlan ethertype s-custom-port <etype>
vlan protocol { { eth2 { <etype> | arp | ip | ipx | at } } | { snap { <oui> | rfc-1042 | snap-8021h } <pid> } | { llc
<dsap> <ssap> } } group <grp_id>
```

### Parameters

<vlist>	ISL VLAN IDs 1~4095
<b>ethertype</b>	Ether type for Custom S-ports
<b>protocol</b>	Protocol-based VLAN commands
<b>s-custom-port</b>	Custom S-ports configuration
<b>&lt;0x0600-0xffff&gt;</b>	Ether type (Range: 0x0600-0xffff)
<b>eth2</b>	Ethernet-based VLAN commands
<b>&lt;0x600-0xffff&gt;</b>	Ether Type(Range: 0x600 - 0xFFFF)
<b>arp</b>	Ether Type is ARP
<b>ip</b>	Ether Type is IP
<b>ipx</b>	Ether Type is IPX
<b>at</b>	Ether Type is AppleTalk
<b>snap</b>	SNAP-based VLAN group
<b>&lt;0x0-0xffffffff&gt;</b>	SNAP OUI (Range 0x000000 - 0xFFFFFFFF)
<b>rfc_1042</b>	SNAP OUI is rfc_1042
<b>snap_8021h</b>	SNAP OUI is 8021h
<b>&lt;0x0-0xffff&gt;</b>	PID (Range: 0x0 - 0xFFFF)
<b>llc</b>	LLC-based VLAN group
<b>&lt;0x0-0xff&gt;</b>	DSAP (Range: 0x00 - 0xFF)
<b>&lt;0x0-0xff&gt;</b>	SSAP (Range: 0x00 - 0xFF)
<b>group</b>	Protocol-based VLAN group commands
<b>&lt;word16&gt;</b>	Group Name (Range: 1 - 16 characters)

### EXAMPLE

```
SM24TBT2DPA(config)# vlan protocol eth2 at group ADMIN
SM24TBT2DPA(config)# vlan ethertype s-custom-port 0x1111
SM24TBT2DPA(config)# vlan protocol eth2 arp group 123
SM24TBT2DPA(config)#{
```

## voice

Configure Voice appliance attributes.

### SYNTAX

```
voice vlan
voice vlan aging-time <aging_time>
voice vlan class { <traffic_class> | low | normal | medium | high }
voice vlan oui <oui> [ description <description> ]
voice vlan vid <vid>
```

### Parameters

voice	Voice appliance attributes
vlan	Vlan for voice traffic
aging-time	Set secure learning aging time
class	Set traffic class
oui	OUI configuration
vid	Set VLAN ID
<AgingTime : 10-10000000>	Aging time, 10-10000000 seconds
<b>advertising-duration</b>	Set advertising duration
<b>&lt;10-10000000&gt;</b>	Aging time, 10-10000000 seconds
<b>&lt;class : 0-7&gt;</b>	Traffic class value
<b>&lt;oui&gt;</b>	OUI value
<b>description</b>	Set description for the OUI
<b>&lt;line32&gt;</b>	Description line
<b>vid</b>	Set VLAN ID
<b>&lt;vlan_id&gt;</b>	VLAN ID, 1-4095

### EXAMPLE

```
SM24TBT2DPA(config)# voice vlan aging-time 3333
SM24TBT2DPA(config)# voice vlan class 7
SM24TBT2DPA(config)# voice vlan vid 3333
SM24TBT2DPA(config)# do show voice vlan
Switch voice vlan is disabled
Switch voice vlan ID is 3333
Switch voice vlan aging-time is 3333 seconds
Switch voice vlan traffic class is 7
```

```
Telephony OUI Description
```

```
-----  
Voice VLAN switchport is configured on following:
```

```
GigabitEthernet 1/1 :
```

```
-----  
GigabitEthernet 1/1 switchport voice vlan mode is disabled
```

```
GigabitEthernet 1/1 switchport voice security is disabled
```

```
GigabitEthernet 1/1 switchport voice discovery protocol is oui
```

```
GigabitEthernet 1/2 :
```

```
-----  
GigabitEthernet 1/2 switchport voice vlan mode is disabled
```

```
GigabitEthernet 1/2 switchport voice security is disabled
```

```
GigabitEthernet 1/2 switchport voice discovery protocol is oui
```

```
-- more --, next page: Space, continue: g, quit: ^C
```

**web**

Configure Web privilege levels.

**SYNTAX**

```
web privilege group <group_name> level { [ cro <cro> ] [ crw <crw> ] [ sro <sro> ] [ srw <srw> ] }*1
```

**Parameters**

<b>privilege</b>	Web privilege			
<b>group</b>	Web privilege group			
<b>CWORD</b>	Valid words are:			
ACTIVATE	Aggregation	Percepexion	DHCP	DMS_client
DMS_server	Debug	Dhcp_Client	Diagnostics	EEE
GARP	GVRP	Green_Ethernet	IP2	IPMC_Snooping
Install_Wizard	LACP	LLDP	Loop_Protect	MAC_Table
MVR	Maintenance	Mirroring	NTP	POE
Ports	Private_VLANs	QoS	RPC	R_RING
SMTP	Security	Spanning_Tree	System	TS_client
TS_server	Timer	Trap_Event	Trouble_Shooting	UPnP
VCL	VLANs	VTUN	Voice_VLAN	XXRP
cloud_management	sFlow			
<b>level</b>	Web privilege group level (0-15)			
<b>cro</b>	Configuration Read-only level			
<b>crw</b>	Configuration Read-write level			
<b>sro</b>	Status/Statistics Read-only level			
<b>srw</b>	Status/Statistics Read-write level			
<Sro : 0-15>				
<SrW : 0-15>				
<Cr0 : 0-15>				
<Crw : 0-15>				

**EXAMPLE**

```
SM24TBT2DPA(config)# web privilege group Ports level crw 15
SM24TBT2DPA(config)#

```

**Messages:**

*The privilege level of 'Status/Statistics Read-only' should be less than or equal to 'Status/Statistics Read-write'*

*The privilege level of 'Configuration Read-only' should be less than or equal to 'Configuration Read-write'*

### 3-2 **access-list**

Configure Access list entry and Rate limiter parameters.

Table : Configure access-list Commands

<b><u>Command</u></b>	<b><u>Function</u></b>
<b>ace</b>	Access list entry
<b>rate-limiter</b>	Rate limiter

#### **rate-limiter**

Configure Rate limiter.

##### **SYNTAX**

```
access-list rate-limiter [ <rate_limiter_list> ] { pps <pps_rate> | 100pps <pps100_rate> | kpps <kpps_rate> |
100kbps <kpbs100_rate> }
```

##### **Parameters**

**100kbps** 100k bits per second

**<RateLimiterList : 1~16>** Rate limiter ID

**<PpsRate : 0-3276700>** Rate value

**<0-10000>** Rate value

**<100KbpsRate : 0-10000>**

##### **EXAMPLE**

```
SM24TBT2DPA(config)# access-list rate-limiter 100kbps 111
```

```
SM24TBT2DPA(config)# do show access-list
```

```
Switch access-list ace number: 0
```

```
Switch access-list rate limiter ID 1 is 11100 kbps
```

```
Switch access-list rate limiter ID 2 is 11100 kbps
```

```
Switch access-list rate limiter ID 3 is 11100 kbps
```

```
Switch access-list rate limiter ID 4 is 11100 kbps
```

```
Switch access-list rate limiter ID 5 is 11100 kbps
```

```
Switch access-list rate limiter ID 6 is 11100 kbps
```

```
Switch access-list rate limiter ID 7 is 11100 kbps
```

```
Switch access-list rate limiter ID 8 is 11100 kbps
```

```
Switch access-list rate limiter ID 9 is 11100 kbps
```

```
Switch access-list rate limiter ID 10 is 11100 kbps
Switch access-list rate limiter ID 11 is 11100 kbps
Switch access-list rate limiter ID 12 is 11100 kbps
Switch access-list rate limiter ID 13 is 11100 kbps
Switch access-list rate limiter ID 14 is 11100 kbps
Switch access-list rate limiter ID 15 is 11100 kbps
Switch access-list rate limiter ID 16 is 11100 kbps

GigabitEthernet 1/1 :
-----
-- more --, next page: Space, continue: g, quit: ^C
```

## ace

Configure Access List Control entry. An ACE (Access Control Entry) describes access permission associated with a particular ACE ID. There are three ACE frame types (Ethernet Type, ARP, and IPv4) and two ACE actions (permit and deny). The ACE also contains many different detailed parameter options that are available for individual application.

### SYNTAX

```
access-list ace{ update<1-256> | <1-256> } [action< deny | filter | permit >]
access-list ace{ update<1-256> | <1-256> } [dmac-type < any | broadcast | multicast | unicast >]
access-list ace{ update<1-256> | <1-256> } [frametype < any | arp | etype | ipv4 | ipv4-icmp | ipv4-tcp | ipv4-udp | ipv6 | ipv6-icmp | ipv6-tcp | ipv6-udp >]
access-list ace{ update<1-256> | <1-256> } [ ingress ] [ ingress interface { <port_type> <port_type_id> | <port_type> <port_type_list> } | any ]
access-list ace{ update<1-256> | <1-256> } [ logging [ disable ] ]
access-list ace{ update<1-256> | <1-256> } [ lookup [ disable ] ]
access-list ace{ update<1-256> | <1-256> } [ mirror [ disable ] ]
access-list ace{ update<1-256> | <1-256> } [ next { <1-256> | last } ]
access-list ace{ update<1-256> | <1-256> } [ policy <0-255> [ policy-bitmask <0x0-0xFF> ] ]
access-list ace{ update<1-256> | <1-256> } [ rate-limiter { <1-16> | disable } ]
access-list ace{ update<1-256> | <1-256> } [ redirect | interface { <port_type> <port_type_id> | <port_type> <port_type_list> } | disable ]
access-list ace{ update<1-256> | <1-256> } [ shutdown ]
access-list ace{ update<1-256> | <1-256> } [ tag { tagged | untagged | any } ]
access-list ace{ update<1-256> | <1-256> } [ tag-priority { <0-7> | any } ]
access-list ace{ update<1-256> | <1-256> } [ vid { <1-4095> | any } ]
```

### Parameters

<Acetd : 1-256>	update
action	Access list action
dmac-type	The type of destination MAC address
frametype	Frame type
ingress	Ingress
logging	Logging frame information
mirror	Mirror frame to destination mirror port
next	insert the current ACE before the next ACE ID
policy	Policy
rate-limiter	Rate limiter

<b>redirect</b>	Redirect frame to specific port
<b>shutdown</b>	Shutdown incoming port
<b>tag</b>	Tag
<b>tag-priority</b>	Tag priority
<b>vid</b>	VID field
<b>deny</b>	Deny
<b>filter</b>	Filter
<b>permit</b>	Permit
<b>any</b>	Don't-care the type of destination MAC address
<b>any</b>	Don't-care tagged or untagged
<b>tagged</b>	Tagged
<b>untagged</b>	Untagged
<b>broadcast</b>	Broadcast destination MAC address
<b>multicast</b>	Multicast destination MAC address
<b>unicast</b>	Unicast destination MAC address
<b>any</b>	Don't-care the frame type
<b>arp</b>	Frame type of ARP
<b>etype</b>	Frame type of etype
<b>ipv4</b>	Frame type of IPv4
<b>ipv4-icmp</b>	Frame type of IPv4 ICMP
<b>ipv4-tcp</b>	Frame type of IPv4 TCP
<b>ipv4-udp</b>	Frame type of IPv4 UDP
<b>ipv6</b>	Frame type of IPv6
<b>ipv6-icmp</b>	Frame type of IPv6 ICMP
<b>ipv6-tcp</b>	Frame type of IPv6 TCP
<b>ipv6-udp</b>	Frame type of IPv6 UDP
<b>interface</b>	Select an interface to configure
<b>&lt;port_type&gt;</b>	Gigabit Ethernet
*	All switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet port
<b>&lt;port_type_id&gt;</b>	Port ID in the format of switch-no/port-no ex, 1/1-24 for Gigabit Ethernet
<b>&lt;port_type&gt;</b>	* or Gigabit Ethernet
Gigabit Ethernet	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24
<b>any</b>	Don't-care the ingress interface
<b>&lt;0-255&gt;</b>	Policy ID

<b>policy-bitmask</b>	The bitmask for policy ID
<b>&lt;0x0-0xFF&gt;</b>	The value of policy bitmask
<b>&lt;1-4095&gt;</b>	The value of VID field
<b>&lt;0-7&gt;</b>	The value of tag priority
0-1	The range of tag priority
0-3	The range of tag priority
2-3	The range of tag priority
4-5	The range of tag priority
4-7	The range of tag priority
6-7	The range of tag priority
<b>&lt;TagPriority : 0-7&gt;</b>	The value of tag priority
any	Don't-care the value of tag priority field

**EXAMPLE 1**

```
SM24TBT2DPA(config)# access-list ace 10 action deny
SM24TBT2DPA(config)# access-list ace ?
    <AceId : 1-256>      ACE ID
    update              Update an existing ACE
SM24TBT2DPA(config)# access-list rate-limiter ?
    100kbps            100k bits per second
    <RateLimiterList : 1~16>    Rate limiter ID
    pps                Packets per second
SM24TBT2DPA(config)#

```

**EXAMPLE 2**

```
SM24TBT2DPB(config)# access-list ace 1 dmac-type multicast frametype etype loggi
ng tag tagged vid 100
SM24TBT2DPB(config)# access-list ace update 1 ingress interface GigabitEthernet
1/6-12 redirect interface GigabitEthernet 1/1-6
% Port redirect cannot be configured while permitted or filtered action.
SM24TBT2DPB(config)# access-list ace 2 frametype ipv4-tcp action filter interface
GigabitEthernet 1/11 logging policy 1 shutdown dmac-type unicast tag-priority 6
SM24TBT2DPB(config)#

```

### 3-3 *no*

Negate a command or set its defaults.

**Table : Configure no Commands**

SM24TBT2DPA(config)# no ?	
aaa	Authentication, Authorization and Accounting
access	Access management
access-list	Access list
aggregation	Aggregation mode
always-on-poe	Disable Always On PoE
banner	Define a login banner
clock	Configure time-of-day clock
dot1x	IEEE Standard for port-based Network Access Control
enable	Modify enable password parameters
exec-timeout	Auto-logout timeout period
green-ethernet	Green ethernet (Power reduction)
gvrp	Enable GVRP feature
hostname	Set system's network name
interface	Select an interface to configure
ip	Internet Protocol
ipmc	IPv4/IPv6 multicast configuration
ipv6	IPv6 configuration commands
lacp	LACP settings
lldp	LLDP configurations.
logging	Syslog
loop-protect	Loop protection configuration
mac	MAC table entries/configuration
map-api-key	Google Map API Key
monitor	Set monitor configuration.
mvr	Multicast VLAN Registration configuration
ntp	Configure NTP
poe	Power Over Ethernet.
port-security	Enable/disable port security globally.
privilege	Command privilege parameters
qos	Quality of Service
radius-server	Configure RADIUS
rmon	Remote Monitoring
sflow	Statistics flow.
snmp-server	Enable SNMP server
spanning-tree	STP Bridge
system	Set the system description
tacacs-server	Configure TACACS+
upnp	Set UPnP's configurations
username	Establish User Name Authentication
vlan	Vlan commands
voice	Voice appliance attributes
web	Web

SM24TBT2DPA(config)#

## aaa

Negate Authentication, Authorization and Accounting login.

### SYNTAX

```
no aaa authentication login { console | telnet | ssh | http }
```

#### Parameters

<b>authentication</b>	Authentication
<b>login</b>	Login
<b>console</b>	Disable Console
<b>http</b>	Disable HTTP
<b>ssh</b>	Disable SSH
<b>telnet</b>	Disable Telnet

### EXAMPLE

```
SM24TBT2DPA(config)# no aaa authentication login ssh  
SM24TBT2DPA(config)#+
```

## access

Negate Access management

### SYNTAX

```
no access management [<1~16>]  
no access management
```

#### Parameters

<b>management</b>	Access management configuration
<b>&lt;1~16&gt;</b>	ID of access management entry

### EXAMPLE

```
SM24TBT2DPA(config)# no access management  
SM24TBT2DPA(config)#+
```

## **access-list**

Negate Access list.

### **SYNTAX**

```
no access-list ace <1~256>
```

#### **Parameters**

**ace** Access list entry

**<Aceld : 1-256>** ACE ID

### **EXAMPLE**

```
SM24TBT2DPA(config)# no access-list ace 1  
SM24TBT2DPA(config)#
```

## **aggregation**

Negate Aggregation mode.

### **SYNTAX**

```
no aggregation mode
```

#### **Parameters**

**mode** Traffic distribution mode

### **EXAMPLE**

```
SM24TBT2DPA(config)# no aggregation mode  
SM24TBT2DPA(config)#
```

## **always-on-poe**

Disable Always On PoE. Note that it will take 75 - 80 seconds to have PoE++ power on the ports to power PDs again if the switch makes a cold restart. The "Always on PoE" command has no effect on this time.

### **SYNTAX**

```
no always-on-poe
```

#### **Parameters**

| Output modifiers

<cr>

### **EXAMPLE**

```
SM24TBT2DPA(config)# no always-on-poe  
Always On PoE Status : Disable  
SM24TBT2DPA(config)#
```

## ***banner***

Define a banner.

### **SYNTAX**

**no** banner [ motd ]

**no** banner exec

**no** banner login

### **Parameters**

exec        Set EXEC process creation banner

login      Set login banner

motd      Set Message of the Day banner

### **EXAMPLE**

```
SM24TBT2DPA(config)# no banner login
```

```
SM24TBT2DPA(config)#
```

## ***clock***

Configure time-of-day clock.

### **SYNTAX**

**no** clock summer-time

**no** clock timezone

### **Parameters**

summer-time      Configure summer (daylight savings) time

timezone        Configure time zone

### **EXAMPLE**

```
SM24TBT2DPA(config)# no clock summer-time
```

```
SM24TBT2DPA(config)# no clock timezone
```

```
SM24TBT2DPA(config)#
```

## dot1x

IEEE Standard for port-based Network Access Control

### SYNTAX

```
no dot1x authentication timer inactivity
no dot1x authentication timer re-authenticate
no dot1x feature { [ guest-vlan ] [ radius-qos ] [ radius-vlan ] }
no dot1x guest-vlan [supplicant]
no dot1x max-reauth-req
no dot1x re-authentication
no dot1x system-auth-control
no dot1x timeout quiet-period
no dot1x timeout tx-period
```

### Parameters

<b>authentication</b>	Authentication
<b>feature</b>	Globally enables/disables a dot1x feature functionality
<b>guest-vlan</b>	Guest VLAN
<b>max-reauth-req</b>	The number of time a Request Identity EAPOL frame is sent without response before considering entering the Guest VLAN.
<b>re-authentication</b>	Set Re-authentication state
<b>system-auth-control</b>	Set the global NAS state
<b>timeout</b>	timeout
<b>timer</b>	timer
<b>inactivity</b>	Time in seconds between check for activity on successfully authenticated MAC addresses.
<b>re-authenticate</b>	The period between re-authentication attempts in seconds
<b>guest-vlan</b>	Globally enables/disables state of guest-vlan
<b>radius-qos</b>	Globally enables/disables state of RADIUS-assigned QoS.
<b>radius-vlan</b>	Globally enables/disables state of RADIUS-assigned VLAN.
<b>supplicant</b>	The switch remembers if an EAPOL frame has been received on the port for the life-time of the port. Once the switch considers whether to enter the Guest VLAN, it will first check if this option is enabled or disabled. If disabled (unchecked; default), the switch will only enter the Guest VLAN if an EAPOL frame has not been received on the port for the life-time of the port. If enabled (checked), the switch will consider entering the Guest VLAN even if an EAPOL frame has been received on the port for

the life-time of the port.

- quiet-period** Time in seconds before a MAC-address that failed authentication gets a new authentication chance.
- tx-period** the time between EAPOL retransmissions.

#### EXAMPLE

```
SM24TBT2DPA(config)# no dot1x authentication timer inactivity
SM24TBT2DPA(config)# no dot1x feature guest-vlan radius-qos radius-vlan
SM24TBT2DPA(config)# no dot1x guest-vlan supplicant
SM24TBT2DPA(config)# no dot1x max-reauth-req
SM24TBT2DPA(config)# no dot1x re-authentication
SM24TBT2DPA(config)# no dot1x system-auth-control
SM24TBT2DPA(config)# no dot1x timeout tx-period
SM24TBT2DPA(config)#

```

## ***enable***

Disable password parameters

#### SYNTAX

- no enable password [ level <1-15> ]**  
**no enable secret [0|5 { level <1-15> }]**

#### Parameters

- password** Assign the privileged level clear password
- secret** Assign the privileged level secret
- 0** Specifies an UNENCRYPTED password will follow
- 5** Specifies an ENCRYPTED password will follow
- level** Set exec level password
- <1-15>** Level number

#### EXAMPLE

```
SM24TBT2DPA(config)# no enable secret level 15
SM24TBT2DPA(config)# no enable password level 15
SM24TBT2DPA(config)#

```

## exec-timeout

No Exec Auto-logout timeout period.

### SYNTAX

```
no exec-timeout autologout <cr>
```

### Parameters

None

### EXAMPLE

```
SM24TBT2DPA(config)# no exec-timeout autologout  
SM24TBT2DPA(config)#
```

## gvrp

Negate GVRP feature.

### SYNTAX

```
no gvrp
```

```
no gvrp max-vlans <maxvlans>
```

```
no gvrp time { [ join-time <jointime> ] [ leave-time <leavetime> ] [ leave-all-time <leavealltime> ] }*1
```

### Parameters

**max-vlans** Number of simultaneously VLANs that GVRP can control

**time** Config GARP protocol timer parameters. IEEE 802.1D-2004, clause 12.11.

**join-time** Set GARP protocol parameter JoinTime. See IEEE 802.1D-2004, clause 12.11

**leave-all-time** Set GARP protocol parameter LeaveAllTime. See IEEE 802.1D-2004, clause 12.11

**leave-time** Set GARP protocol parameter LeaveTime. See IEEE 802.1D-2004, clause 12.11

### EXAMPLE

```
SM24TBT2DPA(config)#no gvrp max-vlans 1  
SM24TBT2DPA(config)#no gvrp time join-time 10  
SM24TBT2DPA(config)#no gvrp time leave-all-time 2000  
SM24TBT2DPA(config)#no gvrp time leave-time 70  
SM24TBT2DPA(config)#
```

## **hostname**

Negate system's network name.

### **SYNTAX**

**no** hostname

### **EXAMPLE**

```
SM24TBT2DPA(config)# no hostname  
SM24TBT2DPA(config)#
```

## **interface**

Negate Interface VLAN feature.

### **SYNTAX**

**no** interface vlan <vlan\_list>

#### **Parameters**

**vlan** Vlan interface configurations

**<vlan\_list>** Vlan list

### **EXAMPLE**

```
SM24TBT2DPA(config)# no interface vlan 10  
SM24TBT2DPA(config)#
```

**Ip**

Set system's network name.

**SYNTAX**

```
no ip arp inspection
no ip arp inspection entry interface <port_type> <in_port_type_id> <vlan_var> <mac_var> <ipv4_var>
no ip arp inspection vlan <in_vlan_list>
no ip arp inspection vlan <in_vlan_list> logging
no ip dhcp excluded-address <low_ip> [ <high_ip> ]
no ip dhcp pool <pool_name>
no ip dhcp relay
no ip dhcp relay information option
no ip dhcp relay information policy
no ip dhcp snooping
no ip dns proxy
no ip helper-address
no ip igmp host-proxy [ leave-proxy ]
no ip igmp snooping
no ip igmp snooping vlan [ <v_vlan_list> ]
no ip igmp ssm-range
no ip igmp unknown-flooding
no ip name-server
no ip route <v_ipv4_addr> <v_ipv4_netmask> <v_ipv4_gw>
no ip routing
no ip source binding interface <port_type> <in_port_type_id> <vlan_var> <ipv4_var> <mac_var>
no ip verify source
```

**Parameters**

<b>arp</b>	Address Resolution Protocol
<b>inspection</b>	ARP inspection
<b>entry</b>	arp inspection entry
<b>interface</b>	arp inspection entry interface config
<b>GigabitEthernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_id&gt;</b>	Port ID in the format of switch-no/port-no, 1/1-24 for Gigabit Ethernet
<b>&lt;vlan_id&gt;</b>	Select a VLAN id to configure
<b>&lt;mac_icast&gt;</b>	Select a MAC address to configure
<b>&lt;ipv4_icast&gt;</b>	Select an IP Address to configure

<b>vlan</b>	arp inspection vlan setting
<b>&lt;vlan_list&gt;</b>	arp inspection vlan list
<b>logging</b>	ARP inspection vlan logging mode config
<b>dhcp</b>	Dynamic Host Configuration Protocol
<b>excluded-address</b>	Prevent DHCP from assigning certain address
<b>&lt;ip_address&gt;</b>	Low IP address and High IP address
<b>&lt;WORD&gt;</b>	Pool name in 32 characters
<b>pool</b>	Configure DHCP address pools
<b>relay</b>	DHCP relay agent configuration
<b>server</b>	enable DHCP server
<b>snooping</b>	DHCP snooping
<b>information</b>	DHCP information option(Option 82)
<b>option</b>	DHCP option
<b>policy</b>	Policy for handling the receiving DHCP packet already include the information option
<b>snooping</b>	DHCP snooping
<b>dns</b>	Domain Name System
<b>proxy</b>	DNS proxy service
<b>helper-address</b>	None.
<b>http</b>	Hypertext Transfer Protocol
<b>secure-redirect</b>	Secure HTTP web redirection
<b>secure-server</b>	Secure HTTP web server
<b>igmp</b>	Internet Group Management Protocol
<b>host-proxy</b>	IGMP proxy configuration
<b>leave-proxy</b>	IGMP proxy for leave configuration
<b>snooping</b>	Snooping IGMP
<b>vlan</b>	IGMP VLAN
<b>&lt;vlan_list&gt;</b>	VLAN identifier(s); VID
<b>ssm-range</b>	IPv4 address range of Source Specific Multicast
<b>unknown-flooding</b>	Flooding unregistered IPv4 multicast traffic
<b>name-server</b>	Domain Name System
<b>Route</b>	none
<b>&lt;ipv4_addr&gt;</b>	Network
<b>&lt;ipv4_netmask&gt;</b>	Netmask
<b>&lt;ipv4_gateway&gt;</b>	Gateway
<b>routing</b>	Disable routing for IPv4 and IPv6
<b>source</b>	source command

<b>binding</b>	ip source binding
<b>interface</b>	ip source binding entry interface config
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet port
<b>&lt;port_type_id&gt;</b>	Port ID in the format of switch-no/port-no, ex., 1/1-24 for Gigabit Ethernet
<b>&lt;vlan_id&gt;</b>	Select a VLAN id to configure
<b>&lt;ipv4_unicast&gt;</b>	Select an IP Address to configure
<b>&lt;ipv4_netmask&gt;</b>	Select a subnet mask to configure
<b>&lt;mac_unicast&gt;</b>	Select a MAC address to configure
<b>ssh</b>	Secure Shell
<b>verify</b>	verify command
<b>source</b>	verify source

**EXAMPLE**

```
SM24TBT2DPA(config)# no ip arp inspection vlan 3 logging
SM24TBT2DPA(config)# no ip dhcp relay information option
SM24TBT2DPA(config)# no ip dns proxy
SM24TBT2DPA(config)# no ip helper-address
SM24TBT2DPA(config)# no ip igmp snooping
SM24TBT2DPA(config)# no ip name-server
SM24TBT2DPA(config)# no ip routing
SM24TBT2DPA(config)# no ip ssh
SM24TBT2DPA(config)# no ip verify source
SM24TBT2DPA(config)#{
```

## ***ipmc***

Negate IPv4/IPv6 multicast configuration

### **SYNTAX**

**no ipmc profile <Profilename : word16>**

**no ipmc range <Entryname : word16>**

### **Parameters**

**profile** IPMC profile configuration

**<Profilename : word16>** Profile name in 16 char's

**range** A range of IPv4/IPv6 multicast addresses for the profile

**<Entryname : word16>** Range entry name in 16 characters

### **EXAMPLE**

```
SM24TBT2DPA(config)# no ipmc profile
```

```
SM24TBT2DPA(config)#
```

## ipv6

Negate IPv6 configuration commands

### SYNTAX

```
no ipv6 mld host-proxy [ leave-proxy ]
no ipv6 mld snooping
no ipv6 mld snooping [vlan <vlan_list>]
no ipv6 mld ssm-range
no ipv6 mld unknown-flooding
no ipv6 route <ipv6_subnet> { <ipv6_unicast> | interface vlan <vlan_id> <ipv6_linklocal> }
```

### Parameters

<b>mld</b>	Multicast Listener Discovery
<b>host-proxy</b>	MLD proxy configuration
<b>leave-proxy</b>	MLD proxy for leave configuration
<b>snooping</b>	Snooping MLD
<b>vlan</b>	MLD VLAN
<b>&lt;vlan_list&gt;</b>	VLAN identifier(s): VID
<b>ssm-range</b>	IPv6 address range of Source Specific Multicast
<b>unknown-flooding</b>	Flooding unregistered IPv6 multicast traffic
<b>route</b>	Configure static routes
<b>&lt;ipv6_subnet&gt;</b>	IPv6 prefix x:x::y/z
<b>&lt;ipv6_unicast&gt;</b>	IPv6 unicast address (except link-local address) of next-hop
<b>interface</b>	Select an interface to configure
<b>vlan</b>	VLAN Interface
<b>&lt;vlan_id&gt;</b>	VLAN identifier(s): VID
<b>&lt;ipv6_linklocal&gt;</b>	IPv6 link-local address of next-hop

### EXAMPLE

```
SM24TBT2DPA(config)# no ipv6 mld snooping ?
      vlan    MLD VLAN
      <cr>
SM24TBT2DPA(config)# no ipv6 mld snooping
SM24TBT2DPA(config)#{
```

## **lacp**

Negate LACP settings

### **SYNTAX**

```
no lacp system-priority <1-65535>
```

#### **Parameters**

**system-priority**                System priority

**<1-65535>**                Priority value, lower means higher priority

### **EXAMPLE**

```
SM24TBT2DPA(config)# no lacp system-priority 10000
SM24TBT2DPA(config)# no lacp ?
    system-priority      System priority
SM24TBT2DPA(config)# no lacp
system-priority
SM24TBT2DPA(config)# no lacp system-priority ?
    <1-65535>      Priority value, lower means higher priority
SM24TBT2DPA(config)#

```

## **lldp**

Negate LLDP configurations.

### **SYNTAX**

```
no lldp holdtime
no lldp med datum
no lldp med fast
no lldp med location-tlv altitude
no lldp med location-tlv civic-addr { country | state | county | city | district | block | street | leading-street-direction | trailing-street-suffix | street-suffix | house-no | house-no-suffix | landmark | additional-info | name | zip-code | building | apartment | floor | room-number | place-type | postal-community-name | p-o-box | additional-code }
no lldp med location-tlv elin-addr
no lldp med location-tlv latitude
no lldp med location-tlv longitude
no lldp med media-vlan-policy <0~31>
no lldp reinit
no lldp timer
no lldp transmission-delay
```

### **Parameters**

<b>holdtime</b>	Sets LLDP hold time (The neighbor switch will discarded the LLDP information after "hold time" multiplied with "timer" seconds ).
<b>med</b>	Media Endpoint Discovery.
<b>reinit</b>	Sets LLDP reinitialization delay.
<b>timer</b>	Sets LLDP TX interval (The time between each LLDP frame transmitted in seconds).
<b>tlv-select</b>	Which optional TLVs to transmit.
<b>transmission-delay</b>	Sets LLDP transmision-delay. LLDP transmission delay (the amount of time that the transmission of LLDP frames will be delayed after LLDP configuration has changed) in seconds.)
<b>datum</b>	Set datum to default value.
<b>fast</b>	Set fast repeat count to default value.
<b>location-tlv</b>	LLDP-MED Location Type Length Value parameter.
<b>media-vlan-policy</b>	Use the media-vlan-policy to create a policy, which can be assigned to an interface.
<b>altitude</b>	Setting altitude to default.
<b>civic-addr</b>	Civic address information and postal information
<b>elin-addr</b>	Set elin address to default value.
<b>latitude</b>	Setting Latitude parameter to default.

<b>longitude</b>	Setting longitude to default.
<b>additional-code</b>	Additional code - Example: 1320300003.
<b>additional-info</b>	Additional location info - Example: South Wing.
<b>apartment</b>	Unit (Apartment, suite) - Example: Apt 42.
<b>block</b>	Neighbourhood, block.
<b>building</b>	Building (structure) - Example: Low Library.
<b>city</b>	City, township, shi (Japan) - Example: Copenhagen.
<b>country</b>	The two-letter ISO 3166 country code in capital ASCII letters - Eg: DK, DE or US.
<b>county</b>	County, parish, gun (Japan), district.
<b>district</b>	City division, borough, city district, ward, chou (Japan).
<b>floor</b>	Floor - Example: 4.
<b>house-no</b>	House number - Example: 21.
<b>house-no-suffix</b>	House number suffix - Example: A, 1/2.
<b>landmark</b>	Landmark or vanity address - Example: Columbia University.
<b>leading-street-direction</b>	Leading street direction - Example: N.
<b>name</b>	Name (residence and office occupant) - Example: Flemming Jahn.
<b>p-o-box</b>	Post office box (P.O. BOX) - Example: 12345.
<b>place-type</b>	Place type - Example: Office.
<b>postal-community-name</b>	Postal community name - Example: Leonia.
<b>room-number</b>	Room number - Example: 450F.
<b>state</b>	National subdivisions (state, canton, region, province, prefecture).
<b>street</b>	Street - Example: Poppelvej.
<b>street-suffix</b>	Street suffix - Example: Ave, Platz.
<b>trailing-street-suffix</b>	Trailing street suffix - Example: SW.
<b>zip-code</b>	Postal/zip code - Example: 2791.
<b>&lt;0~31&gt;</b>	Policy to delete.

**EXAMPLE**

```
SM24TBT2DPA(config)# no lldp holdtime
SM24TBT2DPA(config)#
```

## ***logging***

Negate Syslog.

### **SYNTAX**

**no** logging host

**no** logging on

### **Parameters**

**host** host

**on** Enable syslog server

### **EXAMPLE**

```
SM24TBT2DPA(config)# no logging host  
SM24TBT2DPA(config)# no logging on  
SM24TBT2DPA(config)#{
```

## ***loop-protect***

Loop protection configuration

### **SYNTAX**

**no** loop-protect

**no** loop-protect shutdown-time

**no** loop-protect transmit-time

### **Parameters**

**shutdown-time** Loop protection shutdown time interval

**transmit-time** Loop protection transmit time interval

### **EXAMPLE**

```
SM24TBT2DPA(config)# no loop-protect ?  
    shutdown-time      Loop protection shutdown time interval  
    transmit-time     Loop protection transmit time interval  
    <cr>  
SM24TBT2DPA(config)# no loop-protect shutdown-time  
SM24TBT2DPA(config)# no loop-protect transmit-time  
SM24TBT2DPA(config)#{
```

## mac

Negate MAC table entries/configuration

### SYNTAX

```
no mac address-table aging-time [<0,10-1000000> ]  
no mac address-table static <mac_addr> vlan <vlan_id> interface {*|Gigabit Ethernet [<port_type_list>]}
```

#### Parameters

<b>address-table</b>	Mac table entries configuration/table
<b>aging-time</b>	Mac address aging time
<b>&lt;0,10-1000000&gt;</b>	Aging time in seconds, 0 disables aging
<b>static</b>	Static MAC address
<b>&lt;mac_addr&gt;</b>	48 bit MAC address: xx:xx:xx:xx:xx:xx
<b>vlan</b>	VLAN keyword
<b>&lt;vlan_id&gt;</b>	VLAN IDs 1-4095
<b>interface</b>	Select an interface to configure
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet

### EXAMPLE

```
SM24TBT2DPA(config)# no mac address-table aging-time 10000  
SM24TBT2DPA(config)#+
```

## map-api-key

Negate Google Map API Key.

### SYNTAX

```
no map-api-key <cr>
```

#### Parameters

map-api-key  
<cr>

### EXAMPLE

```
SM24TBT2DPA(config)# no map-api-key  
SM24TBT2DPA(config)#+
```

## ***monitor***

Negate monitor configuration.

### **SYNTAX**

```
no monitor destination  
no monitor source { interface Gigabit Ethernet <port_type_list> | cpu}
```

### **Parameters**

<b>destination</b>	The destination port.
<b>source</b>	The source port(s). That is the ports to be mirrored to the destination port.
<b>cpu</b>	Mirror CPU traffic.
<b>interface</b>	Mirror Interface traffic.
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet

### **EXAMPLE**

```
SM24TBT2DPA(config)# no monitor destination  
SM24TBT2DPA(config)# no monitor source  
SM24TBT2DPA(config)#{
```

**mvr**

Negate Multicast VLAN Registration configuration.

**SYNTAX**

```
no mvr
  no mvr name <word16> channel
  no mvr name <word16> frame priority
  no mvr name <word16> frame tagged
  no mvr name <word16> igmp-address
  no mvr name <word16> last-member-query-interval
  no mvr name <word16> mode
  no mvr vlan <vlan_list>
    no mvr vlan <vlan_list> channel
    no mvr vlan <vlan_list> frame priority
    no mvr vlan <vlan_list> frame tagged
    no mvr vlan <vlan_list> igmp-address
    no mvr vlan <vlan_list> last-member-query-interval
    no mvr vlan <vlan_list> mode [{channel | frame | igmp-address | last-member-query-interval}]
```

**Parameters**

<b>name</b>	MVR multicast name
<b>&lt;word16&gt;</b>	MVR multicast VLAN name
<b>channel</b>	MVR channel configuration
<b>frame</b>	MVR control frame in TX
<b>priority</b>	Interface CoS priority
<b>tagged</b>	Tagged IGMP/MLD frames will be sent
<b>igmp-address</b>	MVR address configuration used in IGMP
<b>last-member-query-interval</b>	Last Member Query Interval in tenths of seconds
<b>mode</b>	MVR mode of operation
<b>vlan</b>	MVR multicast vlan
<b>&lt;vlan_list&gt;</b>	MVR multicast VLAN list

**EXAMPLE**

```
SM24TBT2DPA(config)# no mvr vlan 12 mode
SM24TBT2DPA(config)#
```

***ntp***

Negate NTP configurations.

**SYNTAX**

```
no ntp  
no ntp server <1-5>
```

**Parameters**

<b>server</b>	Configure NTP server
<b>&lt;1-5&gt;</b>	index number

**EXAMPLE**

```
SM24TBT2DPA(config)# no ntp ?  
    automatic      Configure Automatic  
    server        Configure NTP server  
    <cr>  
SM24TBT2DPA(config)# no ntp server 2  
SM24TBT2DPA(config)#[
```

## poe

Negate Power Over Ethernet.

### SYNTAX

**no poe**

### Parameters

<b>aging</b>	Enable/disable port security aging.
<b>time</b>	Time in seconds between check for activity on learned MAC addresses.
capacitor-detection	PoE capacitor-detection
management	POE_MANAGEMENT_MODE_HELP
ping-check	Enable POE Ping Check.
profile	erase poe scheduling profile
reboot-chip	erase all poe reboot scheduling
id	erase poe scheduling profile id

### EXAMPLE

```
SM24TBT2DPA(config)# no poe management mode
SM24TBT2DPA(config)# no poe ping-check
SM24TBT2DPA(config)# no poe reboot-chip
SM24TBT2DPA(config)#{
```

## port-security

Negate port security globally.

### SYNTAX

**no port-security**

**no port-security aging**

**no port-security aging time**

### Parameters

**aging**      Enable/disable port security aging.

**time**      Time in seconds between check for activity on learned MAC addresses.

### EXAMPLE

```
SM24TBT2DPA(config)# no port-security aging time
SM24TBT2DPA(config)#{
```

## privilege

Negate Command privilege parameters.

### SYNTAX

```
no privilege
no privilege { exec | configure | config-vlan | line | interface | if-vlan | ipmc-profile | snmps-host | stp-aggr | dhcp-pool | rfc2544-profile } level <0-15> <cmd>
```

### Parameters

config-vlan	configure	dhcp-pool	exec
if-vlan	interface	ipmc-profile	line
rfc2544-profile	snmps-host	stp-aggr	

### EXAMPLE

```
SM24TBT2DPA(config)# no privilege?
no privilege { exec | configure | config-vlan | line | interface | if-vlan | ipmc-profile | snmps-host | stp-aggr | dhcp-pool | rfc2544-profile } level <0-15> <cmd>
SM24TBT2DPA(config)# no privilege rfc2544-profile ?
    level      Set privilege level of command
SM24TBT2DPA(config)# no privilege rfc2544-profile level ?
    <0-15>    Privilege level
SM24TBT2DPA(config)# no privilege stp-aggr level 10
SM24TBT2DPA(config)#

```

## **qos**

Negate Quality of Service.

### **SYNTAX**

**map** Global QoS Map/Table  
**qce** QoS Control Entry  
**storm** Storm policer

### **Parameters**

```
no qos map cos-dscp <cos> dpl <dpl>
no qos map dscp-classify { <dscp_num> | { be | af11 | af12 | af13 | af21 | af22 | af23 | af31 | af32 | af33 | af41 |
af42 | af43 | cs1 | cs2 | cs3 | cs4 | cs5 | cs6 | cs7 | ef | va } }
no qos map dscp-cos { <dscp_num> | { be | af11 | af12 | af13 | af21 | af22 | af23 | af31 | af32 | af33 | af41 | af42 |
af43 | cs1 | cs2 | cs3 | cs4 | cs5 | cs6 | cs7 | ef | va } }
no qos map dscp-egress-translation { <dscp_num> | { be | af11 | af12 | af13 | af21 | af22 | af23 | af31 | af32 |
af33 | af41 | af42 | af43 | cs1 | cs2 | cs3 | cs4 | cs5 | cs6 | cs7 | ef | va } } <dpl>
no qos map dscp-ingress-translation { <dscp_num> | { be | af11 | af12 | af13 | af21 | af22 | af23 | af31 | af32 |
af33 | af41 | af42 | af43 | cs1 | cs2 | cs3 | cs4 | cs5 | cs6 | cs7 | ef | va } }
no qos qce <qce_id_range>
no qos storm { unicast | multicast | broadcast }
```

### **EXAMPLE**

```
SM24TBT2DPA(config)# no qos ?
map      Global QoS Map/Table
qce      QoS Control Entry
storm    Storm policer
SM24TBT2DPA(config)# no qos map ?
cos-dscp          Map for cos to dscp
dscp-classify    Map for dscp classify enable
dscp-cos          Map for dscp to cos
dscp-egress-translation Map for dscp egress translation
dscp-ingress-translation Map for dscp ingress translation
SM24TBT2DPA(config)# no qos qce ?
1~256   QCE ID
SM24TBT2DPA(config)#[/pre>
```

## ***radius-server***

Negate RADIUS config.

### **SYNTAX**

```
no radius-server attribute 32
no radius-server attribute 4
no radius-server attribute 95
no radius-server deadtime
no radius-server host <host_name> [ auth-port <auth_port> ] [ acct-port <acct_port> ]
no radius-server key
no radius-server retransmit
no radius-server timeout
```

### **Parameters**

<b>Attribute</b>	Attribute # (32, 4, or 95)
<b>deadtime</b>	Time to stop using a RADIUS server that doesn't respond
<b>host</b>	Specify a RADIUS server
<b>key</b>	Set RADIUS encryption key
<b>retransmit</b>	Specify the number of retries to active server
<b>timeout</b>	Time to wait for a RADIUS server to reply

<HostName : word1-255> Hostname or IP address

### **EXAMPLE**

```
SM24TBT2DPA(config)# no radius-server attribute 4
SM24TBT2DPA(config)# no radius-server deadtime
SM24TBT2DPA(config)# no radius-server host ned
Error: Host not found!
SM24TBT2DPA(config)# no radius-server key
SM24TBT2DPA(config)# no radius-server retransmit
SM24TBT2DPA(config)# no radius-server timeout
SM24TBT2DPA(config)#{
```

**rmon**

Negate Remote Monitoring.

**SYNTAX**

**no rmon alarm <alarm : 1-65535>**

**no rmon event<event : 1-65535>**

**Parameters**

**alarm** Configure an RMON alarm

**event** Configure an RMON event

**<alarm : 1-65535>** Alarm entry ID

**<event: 1-65535>** Event entry ID

**EXAMPLE**

```
SM24TBT2DPA(config)# no rmon ?
    alarm      Configure an RMON alarm
    event      Configure an RMON event
SM24TBT2DPA(config)# no rmon alarm ?
    <1-65535>    Alarm entry ID
SM24TBT2DPA(config)# no rmon event ?
    <1-65535>    Event entry ID
SM24TBT2DPA(config)# no rmon event 1
% Fail to delete event entry
SM24TBT2DPA(config)#+
```

## sflow

Negate Statistics flow.

### SYNTAX

```
no sflow agent-ip  
no sflow collector-address  
no sflow collector-port  
no sflow max-datatype-size  
no sflow timeout
```

### Parameters

<b>agent-ip</b>	Sets the agent IP address used as agent-address in UDP datagrams to 127.0.0.1.
<b>collector-address</b>	Collector address
<b>collector-port</b>	Collector UDP port
<b>max-datatype-size</b>	Maximum datatype size.
<b>timeout</b>	Receiver timeout measured in seconds. The switch decrements the timeout once per second, and as long as it is non-zero, the receiver receives samples. Once the timeout reaches 0, the receiver and all its configuration is reset to defaults.

### EXAMPLE

```
SM24TBT2DPA(config)# no sflow agent-ip  
SM24TBT2DPA(config)# no sflow collector-address  
SM24TBT2DPA(config)# no sflow collector-port  
SM24TBT2DPA(config)# no sflow max-datatype-size  
SM24TBT2DPA(config)# no sflow timeout  
SM24TBT2DPA(config)#[/pre>
```

## snmp-server

Negate SNMP server.

### SYNTAX

```
no snmp-server
no snmp-server access <Groupname : word32> model { v1 | v2c | v3 | any } level { auth | noauth | priv }
no snmp-server community v2c
no snmp-server community v3 <Community : word127>
no snmp-server contact
no snmp-server engine-id local
no snmp-server host <Conf : word32>
no snmp-server location
no snmp-server security-to-group model { v1 | v2c | v3 } name <Securityname : word32>
no snmp-server trap
no snmp-server user <Username : word32> engine-id <Engineid : word10-32>
no snmp-server version
no snmp-server view <Viewname : word32> <Oidsubtree : word255>
```

### Parameters

<b>access</b>	access configuration
< <b>Groupname</b> : word32>	group name
<b>model</b>	security model
<b>v1</b>	v1 security model
<b>v2c</b>	v2c security model
<b>v3</b>	v3 security model
<b>any</b>	any security model
<b>level</b>	security level
<b>auth</b>	authNoPriv Security Level
<b>noauth</b>	noAuthNoPriv Security Level
<b>priv</b>	authPriv Security Level
<b>community</b>	Set the SNMP community
<b>contact</b>	Clear the SNMP server's contact string
<b>engine-id</b>	Set SNMP engine ID
<b>host</b>	Set SNMP host's configurations
<b>location</b>	Clear the SNMP server's location string
<b>security-to-group</b>	security-to-group configuration
<b>trap</b>	Set trap's configurations

<b>user</b>	user who can access SNMP server
<b>version</b>	Set the SNMP server's version
<b>view</b>	MIB view configuration
<b>&lt;Community : word127&gt;</b>	
<b>local</b>	Set SNMP local engine ID
<b>&lt;ConfName : word32&gt;</b>	Name of the host configuration
<b>model</b>	security model
<b>v1</b>	v1 security model
<b>v2c</b>	v2c security model
<b>v3</b>	v3 security model
<b>name</b>	security user
<b>&lt;SecurityName : word32&gt;</b>	security user name
<b>&lt;Username : word32&gt;</b>	name of user
<b>engine-id</b>	engine ID
<b>&lt;Engineid : word10-32&gt;</b>	engine ID octet string
<b>&lt;Viewname : word32&gt;</b>	MIB view name
<b>&lt;Oidsubtree : word255&gt;</b>	MIB view OID

**EXAMPLE**

```
SM24TBT2DPA(config)# no snmp-server access 333 model any level auth
SM24TBT2DPA(config)# no snmp-server community v2c
SM24TBT2DPA(config)# no snmp-server engined-id local
SM24TBT2DPA(config)# no snmp-server host 333
SM24TBT2DPA(config)# no snmp-server location
SM24TBT2DPA(config)# no snmp-server security-to-group model v2c name 132
SM24TBT2DPA(config)# no snmp-server trap
SM24TBT2DPA(config)# no snmp-server version
SM24TBT2DPA(config)#

```

## **spanning-tree**

Negate STP Bridge.

### **SYNTAX**

```
no spanning-tree edge bpdu-filter
no spanning-tree edge bpdu-guard
no spanning-tree mode
no spanning-tree mst <instance> priority
no spanning-tree mst <instance> vlan
no spanning-tree mst forward-time
no spanning-tree mst max-age
no spanning-tree mst max-hops
no spanning-tree mst name
no spanning-tree recovery interval
no spanning-tree transmit hold-count
```

### **Parameters**

<b>edge</b>	Edge ports
<b>mode</b>	STP protocol mode
<b>mst</b>	STP bridge instance
<b>recovery</b>	The error recovery timeout
<b>transmit</b>	BPDUs to transmit
<b>bpdu-filter</b>	Enable BPDU filter (stop BPDU tx/rx)
<b>bpdu-guard</b>	Enable BPDU guard
<b>&lt;Instance : 0-7&gt;</b>	instance 0-7 (CIST=0, MST2=1...)
<b>priority</b>	Priority of the instance
<b>forward-time</b>	Delay between port states
<b>max-age</b>	Max bridge age before timeout
<b>max-hops</b>	MSTP bridge max hop count
<b>name</b>	Name keyword
<b>vlan</b>	VLAN keyword
<b>interval</b>	The interval
<b>hold-count</b>	Max number of transmit BPDUs per sec
<b>&lt;Holdcount : 1-10&gt;</b>	1-10 per sec, 6 is default

**EXAMPLE**

```
SM24TBT2DPA(config)# no spanning-tree edge bpdu-filter
SM24TBT2DPA(config)# no spanning-tree mode
SM24TBT2DPA(config)# no spanning-tree mst max-age
SM24TBT2DPA(config)# no spanning-tree recovery interval
SM24TBT2DPA(config)# no spanning-tree transmit hold-count
SM24TBT2DPA(config)#+
```

## **system**

Negate system entries.

### **SYNTAX**

```
no system contact  
no system description  
no system location  
no system name  
no system reboot
```

### **Parameters**

contact	Clear the SNMP server's contact string
description	Clear the system description string
location	Clear the SNMP server's location string
name	Clear the SNMP server's system model name string
reboot	erase all Switch Reboot scheduling

### **EXAMPLE**

```
SM24TBT2DPA(config)# no system contact  
SM24TBT2DPA(config)# no system description  
SM24TBT2DPA(config)# no system location  
SM24TBT2DPA(config)# no system name  
SM24TBT2DPA(config)# no system reboot  
SM24TBT2DPA(config)#[/pre>
```

## **tacacs-server**

Negate TACACS+.

### **SYNTAX**

```
no tacacs-server deadtime  
no tacacs-server host <host_name> [ port <port> ]  
no tacacs-server key  
no tacacs-server timeout
```

### **Parameters**

<b>deadtime</b>	Time to stop using a TACACS+ server that doesn't respond
<b>host</b>	Specify a TACACS+ server
<b>&lt;Hostname : word1-255&gt;</b>	Host name or IP address
<b>key</b>	Set TACACS+ encryption key
<b>timeout</b>	Time to wait for a TACACS+ server to reply
<b>key</b>	Server specific key (overrides default)
<b>port</b>	TCP port for TACACS+ server
<b>timeout</b>	Time to wait for this TACACS+ server to reply (overrides default)
<b>&lt;Port : 0-65535&gt;</b>	TCP port number

### **EXAMPLE**

```
SM24TBT2DPA(config)# no tacacs-server deadtime  
SM24TBT2DPA(config)# no tacacs-server host 192.168.1.1 port 10000  
SM24TBT2DPA(config)# no tacacs-server key  
SM24TBT2DPA(config)# no tacacs-server timeout  
SM24TBT2DPA(config)#[/pre>
```

**Messages:** *Error: Host not found!*

## **upnp**

Negate UPnP's configurations.

### **SYNTAX**

```
no upnp  
no upnp advertising-duration  
no upnp ttl
```

### **Parameters**

<b>advertising-duration</b>	Set advertising duration
<b>ttl</b>	Set TTL value

### **EXAMPLE**

```
SM24TBT2DPA(config)# no upnp advertising-duration  
SM24TBT2DPA(config)# no upnp ttl  
SM24TBT2DPA(config)#+
```

## **username**

Establish User Name Authentication.

### **SYNTAX**

```
no username <Username : word31>
```

### **Parameters**

<b>&lt;Username : word31&gt;</b>	User name allows letters, numbers and underscores
----------------------------------	---------------------------------------------------

### **EXAMPLE**

```
SM24TBT2DPA(config)# no username admin  
SM24TBT2DPA(config)#+
```

## vlan

Negate Vlan commands.

### SYNTAX

```
no vlan <vlan_list>
no vlan protocol { { eth2 { <etype> | arp | ip | ipx | at } } | { snap { <oui> | rfc-1042 | snap-8021h } <pid> } | { llc
<dsap> <ssap> } } group <grp_id>
no vlan { { ethertype s-custom-port } | <vlan_list> }
```

### Parameters

<b>protocol</b>	Protocol-based VLAN commands
<b>eth2</b>	Ethernet-based VLAN commands
<b>&lt;0x600-0xffff&gt;</b>	Ether Type(Range: 0x600 - 0xFFFF)
<b>arp</b>	Ether Type is ARP
<b>ip</b>	Ether Type is IP
<b>ipx</b>	Ether Type is IPX
<b>at</b>	Ether Type is AppleTalk
<b>snap</b>	SNAP-based VLAN group
<b>&lt;0x0-0xffffffff&gt;</b>	SNAP OUI (Range 0x000000 - 0xFFFFFFFF)
<b>rfc_1042</b>	SNAP OUI is rfc_1042
<b>snap_8021h</b>	SNAP OUI is 8021h
<b>&lt;0x0-0xffff&gt;</b>	PID (Range: 0x0 - 0xFFFF)
<b>llc</b>	LLC-based VLAN group
<b>&lt;0x0-0xff&gt;</b>	DSAP (Range: 0x00 - 0xFF)
<b>&lt;0x0-0xff&gt;</b>	SSAP (Range: 0x00 - 0xFF)
<b>group</b>	Protocol-based VLAN group commands
<b>&lt;word16&gt;</b>	Group Name (Range: 1 - 16 characters)
<b>&lt;vlan_list&gt;</b>	Vlan list
<b>ethertype</b>	EtherType (e.g., s-custom-port)
<b>s-custom-port</b>	S-Custom Port EtherType

### EXAMPLE

```
SM24TBT2DPA(config)# no vlan 1
SM24TBT2DPA(config)# no vlan ethertype s-custom-port
SM24TBT2DPA(config)# no vlan protocol llc 0x00
SM24TBT2DPA(config)#+
```

## voice

Negate Voice appliance attributes.

### SYNTAX

```
no voice vlan  
no voice vlan aging-time  
no voice vlan class  
no voice vlan oui <oui>  
no voice vlan vid
```

### Parameters

<b>vlan</b>	Vlan for voice traffic
<b>aging-time</b>	Set secure learning aging time
<b>class</b>	Set traffic class
<b>oui</b>	OUI configuration
<b>&lt;oui&gt;</b>	Traffic class value
<b>vid</b>	Set VLAN ID

### EXAMPLE

```
SM24TBT2DPA(config)# no voice vlan aging-time  
SM24TBT2DPA(config)# no voice vlan class  
SM24TBT2DPA(config)# no voice vlan vid  
SM24TBT2DPA(config)#+
```

## web

Negate Web privilege levels.

### SYNTAX

```
no web privilege group [ <group_name> ] level
```

#### Parameters

<b>privilege</b>	Web privilege		
<b>group</b>	Web privilege group		
<b>&lt;CWORD&gt;</b>	Valid words are:		
ACTIVATE	Aggregation	DHCP	DMS_client
DMS_server	Debug	Dhcp_Client	Diagnostics
EEE	GARP	GVRP	Green_Ethernet
IP2	IPMC_Snooping	Install_Wizard	LACP
LLDP	Loop_Protect	MAC_Table	MVR
Maintenance	Mirroring	NTP	Percepexion
POE	Ports	Private_VLANs	QoS
RPC	R_RING	SMTP	Security
Spanning_Tree	System	TS_client	TS_server
Timer	Trap_Event	Trouble_Shooting	UPnP
VCL	VLANs	VTUN	Voice_VLAN
XXRP	cloud_management	level	sFlow
<b>level</b>	Web privilege group level		

### EXAMPLE

```
SM24TBT2DPA(config)# no web privilege group lacp level
SM24TBT2DPA(config)#
SM24TBT2DPB(config)# no web privilege group upnp level
SM24TBT2DPB(config)#+
```

### 3-4 qos

Configure Quality of Service parameters.

#### Table : configure – qos Commands

<u>Command</u>	<u>Function</u>
<b>map</b>	Global QoS Map/Table
<b>qce</b>	QoS Control Entry
<b>storm</b>	Storm policer

#### map

Global QoS Map/Table.

##### SYNTAX

```

qos map cos-dscp <cos> dpl <dpl> dscp { <dscp_num> | { be | af11 | af12 | af13 | af21 | af22 | af23 | af31 | af32 |
| af33 | af41 | af42 | af43 | cs1 | cs2 | cs3| cs4 | cs5 | cs6 | cs7 | ef | va } }

qos map dscp-classify { <dscp_num> | { be | af11 | af12 | af13 | af21 | af22 | af23 | af31 | af32 | af33 | af41 |
af42 | af43 | cs1 | cs2 | cs3 | cs4 | cs5 | cs6 | cs7 | ef | va } }

qos map dscp-cos { <dscp_num> | { be | af11 | af12 | af13 | af21 | af22 | af23 | af31 | af32 | af33 | af41 | af42 |
af43 | cs1 | cs2 | cs3 | cs4 | cs5 | cs6 | cs7 | ef | va } } cos <cos> dpl <dpl>

qos map dscp-egress-translation { <dscp_num> | { be | af11 | af12 | af13 | af21| af22 | af23 | af31 | af32 | af33 |

```

```
[ dscp { <dscp6> | { be | af11 | af12 | af13 | af21 | af22 | af23 | af31 | af32 | af33 | af41 | af42 | af43 | cs1 | cs2 | cs3 | cs4 | cs5 | cs6 | cs7 | ef | va } | any } ] [ sport { <sp6> | any } ] [ dport { <dp6> | any } ] } ] [ action { [ cos { <action_cos> | default } ] [ dpl { <action_dpl> | default } ] [ pcp-dei { <action_pcp> <action_dei> | default } ] [ dscp { <action_dscp_dscp> | { be | af11 | af12 | af13 | af21 | af22 | af23 | af31 | af32 | af33 | af41 | af42 | af43 | cs1 | cs2 | cs3 | cs4 | cs5 | cs6 | cs7 | ef | va } | default } ] [ policy { <action_policy> | default } ] }*1 ]  
qos storm { unicast | multicast | broadcast } { { <rate> [ kfps ] } | { 1024 kfps } }
```

#### Parameters

<b>cos-dscp</b>	Map for cos to dscp
<b>dscp-classify</b>	Map for dscp classify enable
<b>dscp-cos</b>	Map for dscp to cos
<b>dscp-egress-translation</b>	Map for dscp egress translation
<b>dscp-ingress-translation</b>	Map for dscp ingress translation
<b>dpl</b>	Specify drop precedence level
<b>&lt;Dpl : 0~1&gt;</b>	Specific drop precedence level or range
<b>dscp</b>	Specify DSCP
<b>&lt;DscpNum : 0-63&gt;</b>	Specific DSCP
<b>cos</b>	Specify class of QoS
<b>&lt;Cos : 0-7&gt;</b>	Specific class of QoS
<b>af11</b>	Assured Forwarding PHB AF11(DSCP 10)
<b>af12</b>	Assured Forwarding PHB AF12(DSCP 12)
<b>af13</b>	Assured Forwarding PHB AF13(DSCP 14)
<b>af21</b>	Assured Forwarding PHB AF21(DSCP 18)
<b>af22</b>	Assured Forwarding PHB AF22(DSCP 20)
<b>af23</b>	Assured Forwarding PHB AF23(DSCP 22)
<b>af31</b>	Assured Forwarding PHB AF31(DSCP 26)
<b>af32</b>	Assured Forwarding PHB AF32(DSCP 28)
<b>af33</b>	Assured Forwarding PHB AF33(DSCP 30)
<b>af41</b>	Assured Forwarding PHB AF41(DSCP 34)
<b>af42</b>	Assured Forwarding PHB AF42(DSCP 36)
<b>af43</b>	Assured Forwarding PHB AF43(DSCP 38)
<b>be</b>	Default PHB(DSCP 0) for best effort traffic
<b>cs1</b>	Class Selector PHB CS1 precedence 1(DSCP 8)
<b>cs2</b>	Class Selector PHB CS2 precedence 2(DSCP 16)
<b>cs3</b>	Class Selector PHB CS3 precedence 3(DSCP 24)
<b>cs4</b>	Class Selector PHB CS4 precedence 4(DSCP 32)

<b>cs5</b>	Class Selector PHB CS5 precedence 5(DSCP 40)
<b>cs6</b>	Class Selector PHB CS6 precedence 6(DSCP 48)
<b>cs7</b>	Class Selector PHB CS7 precedence 7(DSCP 56)
<b>ef</b>	Expedited Forwarding PHB(DSCP 46)
<b>va</b>	Voice Admit PHB(DSCP 44)

**EXAMPLE**

```
SM24TBT2DPA(config)# qos map cos-dscp 5 dpl 1 dscp 20
SM24TBT2DPA(config)# do show qos
interface GigabitEthernet 1/1
qos cos 0
qos pcp 0
qos dpl 0

-- more --, next page: Space, continue: g, quit: ^C
```

**qce**

Configure QoS Control Entry.

**SYNTAX**

```
qos qce refresh  
qos qce { [ update ] } <qce_id> [ { next <qce_id_next> } | last ] [ interface <port_type> [ <port_list> ] ] [ smac { <smac> | <smac_24> | any } ] [ dmac { <dmac> | unicast | multicast | broadcast | any } ] [ tag { [ type { untagged | tagged | c-tagged | s-tagged | any } ] [ vid { <ot_vid> | any } ] [ pcp { <ot_pcp> | any } ] [ dei { <ot_dei> | any } ]}*1 ] [ inner-tag { [ type { untagged | tagged | c-tagged | s-tagged | any } ] [ vid { <it_vid> | any } ] [ pcp { <it_pcp> | any } ] [ dei { <it_dei> | any } ]}*1 ] [ frame-type { any | { etype { <etype_type> | any } } | { llc [ dsap { <llc_dsap> | any } ] [ ssap { <llc_ssap> | any } ] [ control { <llc_control> | any } ] } | { snap [ { <snap_data> | any } ] [ { ipv4 [ proto { <pr4> | tcp | udp | any } ] [ sip { <sip4> | any } ] [ dip { <dip4> | any } ] [ dscp { <dscp4> | { be | af11 | af12 | af13 | af21 | af22 | af23 | af31 | af32 | af33 | af41 | af42 | af43 | cs1 | cs2 | cs3 | cs4 | cs5 | cs6 | cs7 | ef | va } | any } ] [ fragment { yes | no | any } ] [ sport { <sp4> | any } ] [ dport { <dp4> | any } ] } | { ipv6 [ proto { <pr6> | tcp | udp | any } ] [ sip { <sip6> | any } ] [ dip { <dip6> | any } ] [ dscp { <dscp6> | { be | af11 | af12 | af13 | af21 | af22 | af23 | af31 | af32 | af33 | af41 | af42 | af43 | cs1 | cs2 | cs3 | cs4 | cs5 | cs6 | cs7 | ef | va } | any } ] [ sport { <sp6> | any } ] [ dport { <dp6> | any } ] } } ] [ action { [ cos { <action_cos> | default } ] [ dpl { <action_dpl> | default } ] [ pcp-dei { <action_pcp> <action_dei> | default } ] [ dscp { <action_dscp_dscp> | { be | af11 | af12 | af13 | af21 | af22 | af23 | af31 | af32 | af33 | af41 | af42 | af43 | cs1 | cs2 | cs3 | cs4 | cs5 | cs6 | cs7 | ef | va } | default } ] [ policy { <action_policy> | default } ] }]*1 ]
```

**Parameters**

<b>&lt;Id : 1-256&gt;</b>	QCE ID
<b>refresh</b>	Refresh QCE tables in hardware
<b>update</b>	Update an existing QCE
<b>action</b>	Setup action
<b>dmac</b>	Setup matched DMAC
<b>frame-type</b>	Setup matched frame type
<b>interface</b>	Interfaces
<b>last</b>	Place QCE at the end
<b>next</b>	Place QCE before the next QCE ID
<b>smac</b>	Setup matched SMAC. If 'qos qce addr destination' is set, this specifies the DMAC
<b>tag</b>	Setup tag options
<b>vid</b>	Specify VLAN ID
<b>cos</b>	Specify class of service
<b>dpl</b>	Specify drop precedence level

<b>dscp</b>	Specify DSCP
<b>cos</b>	Specify class of service
<b>&lt;Cos : 0-7&gt;</b>	Specific class of service
<b>default</b>	Keep default class of service
<b>&lt;Dpl : 0-1&gt;</b>	Specific drop precedence level
<b>default</b>	Keep default drop precedence level
<b>&lt;Dscp : 0-63&gt;</b>	Specific DSCP
<b>af11</b>	Assured Forwarding PHB AF11(DSCP 10)
<b>af12</b>	Assured Forwarding PHB AF12(DSCP 12)
<b>af13</b>	Assured Forwarding PHB AF13(DSCP 14)
<b>af21</b>	Assured Forwarding PHB AF21(DSCP 18)
<b>af22</b>	Assured Forwarding PHB AF22(DSCP 20)
<b>af23</b>	Assured Forwarding PHB AF23(DSCP 22)
<b>af31</b>	Assured Forwarding PHB AF31(DSCP 26)
<b>af32</b>	Assured Forwarding PHB AF32(DSCP 28)
<b>af33</b>	Assured Forwarding PHB AF33(DSCP 30)
<b>af41</b>	Assured Forwarding PHB AF41(DSCP 34)
<b>af42</b>	Assured Forwarding PHB AF42(DSCP 36)
<b>af43</b>	Assured Forwarding PHB AF43(DSCP 38)
<b>be</b>	Default PHB(DSCP 0) for best effort traffic
<b>cs1</b>	Class Selector PHB CS1 precedence 1(DSCP 8)
<b>cs2</b>	Class Selector PHB CS2 precedence 2(DSCP 16)
<b>cs3</b>	Class Selector PHB CS3 precedence 3(DSCP 24)
<b>cs4</b>	Class Selector PHB CS4 precedence 4(DSCP 32)
<b>cs5</b>	Class Selector PHB CS5 precedence 5(DSCP 40)
<b>cs6</b>	Class Selector PHB CS6 precedence 6(DSCP 48)
<b>cs7</b>	Class Selector PHB CS7 precedence 7(DSCP 56)
<b>default</b>	Keep default DSCP
<b>ef</b>	Expedited Forwarding PHB(DSCP 46)
<b>va</b>	Voice Admit PHB(DSCP 44)
<b>any</b>	Any
<b>broadcast</b>	Broadcast
<b>multicast</b>	Multicast
<b>unicast</b>	Unicast
<b>etype</b>	Ethernet frames
<b>ipv4</b>	IPv4 frames

<b>ipv6</b>	IPv6 frames
<b>llc</b>	LLC frames
<b>snap</b>	SNAP frames
<b>&lt;Etype : 0x600-0x7ff,0x801-0x86dc,0x86de-0xffff&gt;</b>	Specific EtherType
<b>interface</b>	Interfaces
<b>&lt;Next : 1-256&gt;</b>	The next QCE ID
<b>&lt;Pcp : pcp&gt;</b>	Specific PCP (0-7) or range (0-1, 2-3, 4-5, 6-7, 0-3 or 4-7)
<b>&lt;Smac : mac_addr&gt;</b>	Specific SMAC (XX-XX-XX-XX-XX-XX)
<b>tagged</b>	Tagged frames only
<b>untagged</b>	Untagged frames only
<b>&lt;Vid : vlan_list&gt;</b>	Specific VLAN ID or range
<b>interface</b>	Interfaces
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>&lt;PORT_LIST&gt;</b>	Port list in 1/1-26 for Gigabit Ethernet

**EXAMPLE**

```
SM24TBT2DPA(config)# qos qce ?
<Id : 1-256>    QCE ID
refresh          Refresh QCE tables in hardware
update           Update an existing QCE
SM24TBT2DPA(config)# qos qce 100 tag vid any action cos 6
SM24TBT2DPA(config)#
```

## storm

Configure QoS Storm policer.

### SYNTAX

```
qos storm { unicast | multicast | broadcast } { { <rate> [ kfps ] } | { 1024 kfps } }
```

#### Parameters

<b>broadcast</b>	Police broadcast frames
<b>multicast</b>	Police multicast frames
<b>unicast</b>	Police unicast frames
<b>&lt;Rate : 1,2,4,8,16,32,64,128,256,512 &gt;</b>	Policer rate (default fps)
<b>kfps</b>	Rate is kfps

### EXAMPLE

```
SM24TBT2DPA(config)# qos storm broadcast ?
 1024                               Rate is 1024 kfps
 <Rate : 1,2,4,8,16,32,64,128,256,512>  Policer rate (default fps)
SM24TBT2DPA(config)# qos storm multicast ?
 1024                               Rate is 1024 kfps
 <Rate : 1,2,4,8,16,32,64,128,256,512>  Policer rate (default fps)
SM24TBT2DPA(config)# qos storm unicast ?
 1024                               Rate is 1024 kfps
 <Rate : 1,2,4,8,16,32,64,128,256,512>  Policer rate (default fps)
SM24TBT2DPA(config)# qos storm broadcast 256 kfps
SM24TBT2DPA(config)#+
```

**Messages:** %QOS: action parameter not specified

### 3-5 snmp-server

Set SNMP server parameters.

#### SYNTAX

**snmp-server**

**Table : Configure snmp-server Commands**

<b><u>Command</u></b>	<b><u>Function</u></b>
access	access configuration
community	Set the SNMP community
contact	Set the SNMP server's contact string
engine-id	Set SNMP engine ID
host	Set SNMP host's configurations
location	Set the SNMP server's location string
security-to-group	security-to-group configuration
trap	Set trap's configurations
user	Set the SNMPv3 user's configurations
version	Set the SNMP server's version
view	MIB view configuration
<cr>	

## access

Set SNMP server access configuration.

### SYNTAX

```
snmp-server access <group_name> model { v1 | v2c | v3 | any } level { auth | noauth | priv } [ read <view_name> ] [ write <write_name> ]
```

#### Parameters

<GroupName : word32>	group name
<b>model</b>	security model
<b>any</b>	any security model
<b>v1</b>	v1 security model
<b>v2c</b>	v2c security model
<b>v3</b>	v3 security model
<b>level</b>	security level
<b>auth</b>	authNoPriv Security Level
<b>noauth</b>	noAuthNoPriv Security Level
<b>priv</b>	authPriv Security Level
<b>read</b>	specify a read view for the group
<b>write</b>	specify a write view for the group
<ViewName : word255>	read view name
<WriteName : word255>	write view name

### EXAMPLE

```
SM24TBT2DPA(config)# snmp-server access text model v2c level noauth write text  
SM24TBT2DPA(config)#
```

*Messages: The group name 'text' is not exist*

## **community**

Set the SNMP community.

### **SYNTAX**

```
snmp-server community v2c <comm> [ ro | rw ]
snmp-server community v3 <v3_comm> [ <v_ipv4_addr> <v_ipv4_netmask> ]
```

#### **Parameters**

v2c	SNMPv2c
<Community : word127>	Community word
ro	Read only
rw	Read write
v3	SNMPv3
<Community : word127>	Community word
<ipv4_addr>	IPv4 address
<ipv4_netmask>	IPv4 netmask

### **EXAMPLE**

```
SM24TBT2DPA(config)# snmp-server community v2c text
SM24TBT2DPA(config)#
```

## **contact**

Set the SNMP server's contact string.

### **SYNTAX**

```
snmp-server contact <v_line255>
```

#### **Parameters**

contact	Set the SNMP server's contact string
<line255>	contact string

### **EXAMPLE**

```
SM24TBT2DPA(config)# snmp-server contact text
SM24TBT2DPA(config)#
```

## ***engine-id***

Set SNMP engine ID.

### **SYNTAX**

```
snmp-server engine-id local <engineID>
```

#### **Parameters**

**local** Set SNMP local engine ID

**<Engineid : word10-32>** local engine ID

### **EXAMPLE**

```
SM24TBT2DPA(config)# snmp-server engine-id local 1234567891
SM24TBT2DPA(config)#
```

## ***host***

Set SNMP host parameters.

### **SYNTAX**

```
snmp-server host <conf_name>
```

#### **Parameters**

**<word32>** Name of the host configuration

### **EXAMPLE**

```
SM24TBT2DPA(config)# snmp-server host text
SM24TBT2DPA(config-snmps-host)# ?
do      To run exec commands in config mode
end    Go back to EXEC mode
exit   Exit from current mode
help   Description of the interactive help system
host   host configuration
informs Send Inform messages to this host
no     Negate a command or set its defaults
shutdown Disable the trap configuration
trapmode Configure trap mode
version Set SNMP trap version
SM24TBT2DPA(config-snmps-host)# exit
SM24TBT2DPA(config)#
```

## ***location***

Set the SNMP server's location string.

### **SYNTAX**

```
snmp-server location <v_line255>
```

#### **Parameters**

<b>&lt;line255&gt;</b>	location string
------------------------	-----------------

### **EXAMPLE**

```
SM24TBT2DPA(config)# snmp-server location text
SM24TBT2DPA(config)#+
```

## ***security-to-group***

security-to-group configuration.

### **SYNTAX**

```
snmp-server security-to-group model { v1 | v2c | v3 } name <security_name> group <group_name>
```

#### **Parameters**

<b>model</b>	security model
<b>v1</b>	v1 security model
<b>v2c</b>	v2c security model
<b>v3</b>	v3 security model
<b>name</b>	security user
<b>&lt;SecurityName : word32&gt;</b>	security user name
<b>group</b>	security group
<b>&lt;GroupName : word32&gt;</b>	security group name

### **EXAMPLE**

```
SM24TBT2DPA(config)# snmp-server security-to-group model v2c name text group text
SM24TBT2DPA(config)#+
```

## trap

Set SNMP trap.

### SYNTAX

```
snmp-server trap
```

### EXAMPLE

```
SM24TBT2DPA(config)# snmp-server trap  
SM24TBT2DPA(config)#
```

## user

Set the SNMPv3 user parameters.

### SYNTAX

```
snmp-server user <username> engine-id <engineID> [ { md5 { <md5_passwd> | { encrypted <md5_passwd_encrypt> } } | sha { <sha_passwd> | { encrypted <sha_passwd_encrypt> } } } [ priv { des | aes } { <priv_passwd> | { encrypted <priv_passwd_encrypt> } } ]
```

### Parameters

<Username : word32>	Username
engine-id	engine ID
<Engineid : word10-32>	Engine ID octet string
md5	Set MD5 protocol
<Md5Passwd : word8-32>	MD5 password
sha	Set SHA protocol
<ShaPasswd word8-40>	SHA password
priv	Set Privacy
des	Set DES protocol
aes	Set AES protocol
<word8-32>	Set privacy password
encrypted	Specifies an ENCRYPTED password will follow.
<Md5Passwd : word8-84>	MD5 encrypted password
<PrivPasswd : word8-32>	Privacy unencrypted password

### EXAMPLE

```
SM24TBT2DPA(config)# snmp-server user text engine-id 1234567891 md5 12345678 priv  
aes 12345678  
SM24TBT2DPA(config)#
```

## version

Set the SNMP server's version.

### SYNTAX

```
snmp-server version { v1 | v2c | v3 }
```

#### Parameters

**v1**      SNMPv1

**v2c**     SNMPv2c

**v3**      SNMPv3

### EXAMPLE

```
SM24TBT2DPA(config)# snmp-server version v2c
SM24TBT2DPA(config)#
```

## view

Set SNMP MIB view configuration.

### SYNTAX

```
snmp-server view <view_name> <oid_subtree> { include | exclude }
```

#### Parameters

**<ViewName : word32>**      MIB view name

**<OidSubtree : word255>**      MIB view OID

**include**                        Included type from the view

**exclude**                       Excluded type from the view

### EXAMPLE

```
SM24TBT2DPA(config)# snmp-server view text .1 include
SM24TBT2DPA(config)#
```

### 3-6 spanning-tree

Configure Spanning Tree protocol (STP).

**Table** : configure –spanning-tree Commands

<u>Command</u>	<u>Function</u>
aggregation	Aggregation mode
edge	Edge ports
mode	STP protocol mode
mst	STP bridge instance
recovery	The error recovery timeout
transmit	BPDUs to transmit

#### *aggregation*

Configure Aggregation mode.

##### **SYNTAX**

**spanning-tree aggregation**

##### **EXAMPLE**

```
SM24TBT2DPA(config)# spanning-tree aggregation  
SM24TBT2DPA(config-stp-aggr)#+
```

#### *edge*

Configure Edge ports.

##### **SYNTAX**

**spanning-tree edge bpdu-filter**

**spanning-tree edge bpdu-guard**

##### **Parameters**

**bpdu-filter** Enable BPDU filter (stop BPDU tx/rx)

**bpdu-guard** Enable BPDU guard

##### **EXAMPLE**

```
SM24TBT2DPA(config)# spanning-tree edge bpdu-filter  
SM24TBT2DPA(config)#+
```

## mode

Configure STP protocol mode.

### SYNTAX

```
spanning-tree mode { stp | rstp | mstp }
```

#### Parameters

<b>mstp</b>	Multiple Spanning Tree (802.1s)
<b>rstp</b>	Rapid Spanning Tree (802.1w)
<b>stp</b>	802.1D Spanning Tree

### EXAMPLE

```
SM24TBT2DPA(config)# spanning-tree mode stp  
SM24TBT2DPA(config)#+
```

## mst

Configure STP bridge instance.

### SYNTAX

```
spanning-tree mst <Instance : 0-7> priority <Prio : 0-61440>  
spanning-tree mst < Instance : 0-7> vlan <vlan_list>  
spanning-tree mst forward-time <Fwdtime : 4-30>  
spanning-tree mst max-age <Maxage : 6-40> [ forward-time <Fwdtime : 4-30> ]  
spanning-tree mst max-hops <Maxhops : 6-40>  
spanning-tree mst name <Name : word32> revision <0-65535>
```

#### Parameter

<b>&lt;Instance : 0-7&gt;</b>	instance 0-7 (CIST=0, MST2=1...)
<b>forward-time</b>	Delay between port states
<b>max-age</b>	Max bridge age before timeout
<b>max-hops</b>	MSTP bridge max hop count
<b>name</b>	Name keyword
<b>priority</b>	Priority of the instance
<b>vlan</b>	VLAN keyword
<b>&lt;Prio : 0-61440&gt;</b>	Range in seconds
<b>&lt;vlan_list&gt;</b>	Range of VLANs
<b>&lt;Fwdtime : 4-30&gt;</b>	Range in seconds
<b>&lt;Maxage : 6-40&gt;</b>	Range in seconds
<b>&lt;Maxhops : 6-40&gt;</b>	Hop count range

<b>&lt;Name : word32&gt;</b>	Name of the bridge
<b>revision</b>	Revision keyword
<b>&lt;0-65535&gt;</b>	Revision number

**EXAMPLE**

```
SM24TBT2DPA(config)# spanning-tree mst 7 vlan 10
SM24TBT2DPA(config)#
```

***recovery***

Configure error recovery timeouts.

**SYNTAX**

```
spanning-tree recovery interval <Interval : 30-86400>
```

**Parameters**

<b>interval</b>	The interval
<b>&lt;Interval : 30-86400&gt;</b>	Range in seconds

**EXAMPLE**

```
SM24TBT2DPA(config)# spanning-tree recovery interval 50
SM24TBT2DPA(config)#
```

***transmit***

Configure BPDUs to transmit.

**SYNTAX**

```
spanning-tree transmit hold-count <Holdcount : 1-10>
```

**Parameters**

<b>hold-count</b>	Max number of transmit BPDUs per second.
<b>&lt;Holdcount : 1-10&gt;</b>	1-10 per second, 6 is default.

**EXAMPLE**

```
SM24TBT2DPA(config)# spanning-tree transmit hold-count 5
SM24TBT2DPA(config)#
```

## 4. Copy Commands

Copy from source to destination.

### SYNTAX

```
copy { startup-config | running-config | <source_path> } { startup-config | running-config |  
<destination_path> } [ syntax-check ] [ { merge | replace } ]
```

### Parameters

<b>flash:filename   tftp://server/path-and-filename</b>	File in FLASH or on TFTP server
<b>running-config</b>	Currently running configuration
<b>startup-config</b>	Startup configuration
<b>merge</b>	merge source file with running-config
<b>replace</b>	replace running-config with source file, default action
<b>syntax-check</b>	Perform syntax check on source configuration

### EXAMPLE

```
SM24TBT2DPA# copy startup-config running-config syntax-check | include #  
SM24TBT2DPA#
```

```
SM24TBT2DPB# copy running-config startup-config  
Building configuration...  
% Saving 2313 bytes to flash:startup-config  
SM24TBT2DPB#
```

## 5. Debug Commands

Exec mode commands to perform debug functions.

### SYNTAX

```
debug gvrp msti
debug gvrp protocol-state interface (<port_type> [<v_port_type_list>]) vlan <v_vlan_list>
debug gvrp statistic
debug prompt <debug_prompt>
```

### Parameters

<b>gvrp</b>	Debug for the GVRP protocol
<b>prompt</b>	Set prompt for testing
<b>WORD</b>	Word for prompt in 32 char's
<b>interface</b>	Specify the interface
*	All switches or All ports
<b>GigabitEthernet</b>	1 Gigabit Ethernet Port
<b>vlan</b>	The VLAN ID (1-4095)
<b>&lt;vlan_list&gt;</b>	VLAN or VLANs for which information shall be shown
<b>msti</b>	MSTI state
<b>protocol-state</b>	State of Applicant, Registrar and LeaveAll state machines
<b>statistic</b>	statistic
<b>PORT_LIST</b>	Port list in 1/1-26

### EXAMPLE

```
SM24TBT2DPA# debug gvrp protocol-state interface GigabitEthernet 1/1 vlan 100
----- 1
      |<----- State of: ----->||<--- Timer [cs]: -->|
Sw Port VLan  Applicant Registrar LeaveAll txPDU leave leaveall GIP-Context
SM24TBT2DPA# debug prompt?
      prompt  Set prompt for testing
SM24TBT2DPA# debug prompt test#
test## no debug prompt
SM24TBT2DPA# debug prompt ****#
****#
****#
*****# exit
Username:
```

```
Password:  
Username: admin  
Password:  
*****# debug prompt SM24TBT2DPA  
SM24TBT2DPA#
```

## 6. Delete Commands

Delete one file in flash: file system.

### SYNTAX

```
delete <Path : word>
```

### Parameter

<Path : word> Name of file to delete.

### EXAMPLE

```
SM24TBT2DPA# delete text
% Invalid syntax, expected flash:filename
SM24TBT2DPA# delete flash:?
<Path : word> Name of file to delete
<cr>
SM24TBT2DPA# delete flash:text
% Delete of text failed: No such entity.
SM24TBT2DPA# delete flash:
% Invalid syntax, expected flash:filename
SM24TBT2DPA# delete flash:filename ?
<cr>
SM24TBT2DPA# delete flash:filename
% Delete of filename failed: No such entity.
SM24TBT2DPA#
```

## 7. DIR Commands

Directory of all files in flash: file system.

### SYNTAX

```
Dir [ | begin | exclude | include <LINE>]
```

### Parameters

	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

### EXAMPLE

```
SM24TBT2DPA# dir
Directory of flash:
r- 2011-01-01 00:00:00      716 default-config
rw 2011-01-01 00:37:20      2008 startup-config
2 files, 2724 bytes total.
SM24TBT2DPA#
```

## 8. Disable Commands

Turn off privileged commands.

### SYNTAX

```
disable <0-15>
```

### Parameter

<b>&lt;0-15&gt;</b>	Privilege level
---------------------	-----------------

### EXAMPLE

```
SM24TBT2DPA# disable 10
SM24TBT2DPA#
```

## 9. Do Commands

To run Exec commands in Config mode.

### SYNTAX

**do <command>**

### Parameter

**LINE**      Exec Command

### EXAMPLE

```
SM24TBT2DPA# do show clock
System Time      : 2011-01-01T17:55:34+00:00

SM24TBT2DPA# con ter
SM24TBT2DPA(config)# do show clock
System Time      : 2011-01-01T17:55:43+00:00

SM24TBT2DPA(config)#

SM24TBT2DPB# do show ip interface brief
Vlan Address          Method  Status
-----
1 172.27.195.140/24   Manual   UP
SM24TBT2DPB#
```

## 10. DOT1x Commands

IEEE Standard for port-based Network Access Control.

### SYNTAX

```
dot1x authentication timer inactivity <v_10_to_100000>
dot1x authentication timer re-authenticate <v_1_to_3600>
dot1x feature { [ guest-vlan ] [ radius-qos ] [ radius-vlan ] }*1
dot1x guest-vlan <value>
dot1x guest-vlan supplicant
dot1x max-reauth-req <value>
dot1x re-authentication
dot1x system-auth-control
dot1x timeout quiet-period <v_10_to_1000000>
dot1x timeout tx-period <v_1_to_65535>
```

### Parameters

<b>authentication</b>	Authentication
<b>feature</b>	Globally enables/disables a dot1x feature functionality
<b>guest-vlan</b>	Guest VLAN
<b>max-reauth-req</b>	The number of times a Request Identity EAPOL frame is sent without response before considering entering the Guest VLAN
<b>re-authentication</b>	Set Re-authentication state
<b>system-auth-control</b>	Set the global NAS state
<b>timeout</b>	Set the Timeout
*	All switches or All ports
<b>Gigabit Ethernet</b>	1 GigabitEthernet port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet
<b>&lt;1-4095&gt;</b>	Guest VLAN ID used when entering the Guest VLAN.
<b>supplicant</b>	The switch remembers if an EAPOL frame has been received on the port for the life-time of the port. Once the switch considers whether to enter the Guest VLAN, it will first check if this option is enabled or disabled. If disabled (unchecked; default), the switch will only enter the Guest VLAN if an EAPOL frame has not been received on the port for the life-time of the port. If enabled (checked), the switch will consider entering the Guest VLAN even if an EAPOL frame has been received on the port for the life-time of the port.
<b>&lt;1-255&gt;</b>	Number of times for "max-reauth-req"

quiet-period	Time in seconds before a MAC-address that failed authentication gets a new authentication chance.
tx-period	The time between EAPOL retransmissions.
<10-1000000>	seconds
<1-65535>	seconds

**EXAMPLE**

```
SM24TBT2DPA(config)# dot1x feature guest-vlan
SM24TBT2DPA(config)# dot1x authentication timer inactivity 30000
SM24TBT2DPA(config)# dot1x guest-vlan supplicant
SM24TBT2DPA(config)# dot1x max-reauth-req 50
SM24TBT2DPA(config)# dot1x re-authentication
SM24TBT2DPA(config)# dot1x system-auth-control
SM24TBT2DPA(config)# dot1x timeout quiet-period 5000
SM24TBT2DPA(config)# dot1x timeout tx-period 950
SM24TBT2DPA(config)#+
```

## 11. Enable Commands

Config mode command to choose privileged commands and modify enable password parameters.

Note that the Exec mode `enable` command has a different function.

### Syntax

```
enable password [ level <priv> ] <password>
enable secret { 0 | 5 } [ level <priv> ] <password>
```

### Parameters

password	Assign the privileged level clear password
secret	Assign the privileged level secret
WORD	The UNENCRYPTED (cleartext) password
level	Set exec level password
<1-15>	Level number
WORD	The UNENCRYPTED (cleartext) password
0	Specifies an UNENCRYPTED password will follow
5	Specifies an ENCRYPTED secret will follow
<word32>	Password
level	Set exec level password
<cr>	

### EXAMPLE

```
SM24TBT2DPA(config)# enable password AdMiNiStRAt0r99
SM24TBT2DPA(config)# enable password level 10 admin88
SM24TBT2DPA(config)# enable secret 0 ADMIN
SM24TBT2DPA(config)#
```

## 12. Firmware Commands

Firmware upgrade and swap commands. **Note** that if the PoE firmware version is lower than v 188, it will auto upgrade it, which takes ~ 16 minutes; the upgrade procedure can be observed in the console.

### Syntax

```
firmware swap  
firmware upgrade <tftpserver_path_file>
```

### Parameters

<b>swap</b>	Swap between Active and Alternate firmware image.
<b>upgrade</b>	Firmware upgrade
<b>&lt;TFTPServer_path_file : word&gt;</b>	TFTP Server IP address, path and file name for the server containing the new image.

### EXAMPLE

```
SM24TBT2DPA# firmware upgrade tftp://192.168.1.30/path/sm24tbt2dpa.bin  
Download of /path/sm24tbt2dpa.bin from 192.168.1.30 failed: Operation timed out.  
SESPM1040# firmware swap
```

Broadcast message from root@SESPM1040-541-LT (Fri Mar 22 16:17:47 2019):

The system is going down for reboot NOW!

Complete

```
SM24TBT2DPA#
```

### Messages:

*% swap is an invalid TFTP path - Expecting something like tftp://10.10.10.10/path/new\_image.dat  
Error: Product mismatch (Product ID was 4b, have cf)*

### Firmware Upgrade to FW v6.54.3303

The recommended upgrade procedure is to upgrade from v6.54.3104 to v6.54.3303B and then to v6.54.3303.

### Firmware Upgrade to FW vB6.54.3494

Once you upgrade the SM24TBT2DPA to FW vB6.54.3494, you can't fall back to the old FW version. This is because the FW upgrade includes a PoE FW upgrade to support the IEEE 802.3bt standard, so you can't downgrade to an old FW version.

**PoE Mode setting** between v6.54.3303 with v6.54.3476 (and newer)

v6.54.3303	vB6.54.3476
Disabled	Disabled
Enabled (*)	4pair90w
4pair	4pair60w
2pair	8023bt (*)

**Notes:**

1. The PoE mode setting will be mapped according to the table above after firmware upgrade.
2. It's not allowed to downgrade to v6.54.3303 or older version after firmware upgrade to vB6.54.3476 or newer version
3. It's not allowed to swap firmware image when the back image is v6.54.3303 or older version.

## 13. No Commands

Negate a command or set its defaults from Exec mode.

### Syntax

```
no debug prompt
no port-security shutdown [ interface ( <port_type> [ <v_port_type_list> ] ) ]
no terminal editing
no terminal exec-timeout
no terminal history size
no terminal length
no terminal width
```

### Parameters

<b>debug</b>	Debugging functions
<b>port-security</b>	Port security (psec limit)
<b>terminal</b>	Set terminal line parameters
<b>prompt</b>	Clear prompt for testing
<b>shutdown</b>	Reopen one or more ports whose limit is exceeded and shut down.
<b>editing</b>	Enable command line editing
<b>exec-timeout</b>	Set the EXEC timeout
<b>history</b>	Control the command history function
<b>length</b>	Set number of lines on a screen
<b>width</b>	Set width of the display terminal
<b>interface</b>	
*	All switches or All ports
GigabitEthernet	1 Gigabit Ethernet Port
<b>PORT_LIST</b>	Port list in 1/1-26
*	All switches or All ports
GigabitEthernet	1 Gigabit Ethernet Port
<cr>	

### EXAMPLE

```
SM24TBT2DPA# no debug prompt
SM24TBT2DPA# no port-security shutdown interface GigabitEthernet 1/13
SM24TBT2DPA#
SM24TBT2DPB# no terminal history size
SM24TBT2DPB#
```

## 14. PING Commands

Send IP (ICMP) echo or IPv6 (ICMPv6) echo messages.

### Syntax

```
ping ip <v_ip_addr> [ repeat <count> ] [ size <size> ] [ interval <seconds> ]  
ping ipv6 <v_ipv6_addr> [ repeat <count> ] [ size <size> ] [ interval <seconds> ] [ interface vlan <v_vlan_id> ]
```

### Parameters

<b>ip</b>	IP (ICMP) echo
<b>&lt;word1-255&gt;</b>	ICMP destination address
<b>repeat</b>	Specify repeat count
<b>&lt;Count : 1-60&gt;</b>	1-60; Default is 5
<b>size</b>	Specify datagram size
<b>&lt;Size : 2-1452&gt;</b>	2-1452; Default is 56 (excluding MAC, IP and ICMP headers)
<b>interval</b>	Specify repeat interval
<b>&lt;Seconds : 0-30&gt;</b>	0-30; Default is 0
<b>ipv6</b>	IPv6 (ICMPv6) echo
<b>&lt;ipv6_addr&gt;</b>	ICMPv6 destination address
<b>repeat</b>	Specify repeat count
<b>&lt;1-60&gt;</b>	1-60; Default is 5
<b>size</b>	Specify datagram size
<b>&lt;2-1452&gt;</b>	2-1452; Default is 56 (excluding MAC, IP and ICMP headers)
<b>interval</b>	Specify repeat interval
<b>&lt;0-30&gt;</b>	0-30; Default is 0
<b>interface</b>	Select an interface to configure
<b>vlan</b>	VLAN Interface
<b>&lt;vlan_id&gt;</b>	VLAN identifier(s): VID

### EXAMPLE

```
SM24TBT2DPA# ping ip 192.168.1.77 interval 1 repeat 3 size 4  
PING server 192.168.1.77, 4 bytes of data.  
12 bytes from 192.168.1.77: icmp_seq=0, time<10ms  
12 bytes from 192.168.1.77: icmp_seq=1, time<10ms  
12 bytes from 192.168.1.77: icmp_seq=2, time<10ms  
Sent 3 packets, received 3 OK, 0 bad  
SM24TBT2DPA#
```

## 15. Reload Commands

Reload (reboot) the system with or without changing the switch IP address. **Note** that there is also a **non-stop poe** command that lets you re-boot the switch without dropping power to the PoE ports.

### Syntax

```
reload { { { warm } [ sid <usid> ] } | { defaults [ keep-ip ] } }
```

### Parameters

**defaults** Reload factory defaults without rebooting.

**warm** Reload warm (CPU restart only).

**keep-ip** Attempt to keep VLAN1 IP setup.

### EXAMPLE

```
SM24TBT2DPA# reload defaults keep-ip
% Reloading defaults, attempting to keep IP address. Please stand by.
SM24TBT2DPA# reload warm
% Warm reload in progress, please stand by.
SM24TBT2DPA#
Username:
```

## 16. Send Commands

Send a message to other tty lines.

### Syntax

```
send { * | <session_list> | console 0 | vty <vty_list> } <message>
```

#### Parameters

*	All tty lines
<0~16>	Send a message to multiple lines
console	Primary terminal line
0	Send a message to a specific line
vty	Virtual terminal
<0~15>	Send a message to multiple lines
<LINE>	Message to be sent to lines, in 128 characters

### EXAMPLE

```
SM24TBT2DPA# send * yes,i do
Enter TEXT message. End with the character 'y'.
y

-----
*** Message from line 1:
es,i do

-----
SM24TBT2DPA#
```

## 17. Show Commands

Show running system information.

**Table : Show Commands**

<b>Command</b>	<b>Function</b>
<b>aaa</b>	Login methods
<b>access</b>	Access management
<b>access-list</b>	Access list
<b>aggregation</b>	Aggregation port configuration
<b>always-on-poe</b>	Show Always On PoE Status
<b>clock</b>	Configure time-of-day clock
<b>dhcp</b>	Dynamic Host Configuration Protocol
<b>dot1x</b>	IEEE Standard for port-based Network Access Control
<b>event</b>	Show trap event configuration
<b>green-ethernet</b>	Green ethernet (Power reduction)
<b>history</b>	Display the session command history
<b>interface</b>	Interface status and configuration
<b>ip</b>	Internet Protocol
<b>ipmc</b>	IPv4/IPv6 multicast configuration
<b>ipv6</b>	IPv6 configuration commands
<b>lacp</b>	LACP configuration/status
<b>line</b>	TTY line information
<b>lldp</b>	Display LLDP configure information.
<b>logging</b>	Syslog
<b>loop-protect</b>	Loop protection configuration
<b>mac</b>	Mac Address Table information
<b>map-api-key</b>	show google map key configuration
<b>mvr</b>	Multicast VLAN Registration configuration
<b>ntp</b>	Configure NTP
<b>platform</b>	Platform specific information
<b>poe</b>	Power Over Ethernet.
<b>port-security</b>	Port Security Status
<b>power</b>	Power
<b>privilege</b>	Display command privilege
<b>pvlan</b>	PVLAN configuration

<b>qos</b>	Quality of Service
<b>radius-server</b>	RADIUS configuration
<b>rapid-ring</b>	Display Rapid Ring configurations
<b>rmon</b>	RMON statistics
<b>running-config</b>	Show running system information
<b>sflow</b>	Statistics flow.
<b>smtp</b>	Show email information
<b>snmp</b>	Display SNMP configurations
<b>spanning-tree</b>	STP Bridge
<b>switchport</b>	Display switching mode characteristics
<b>system</b>	system
<b>tacacs-server</b>	TACACS+ configuration
<b>terminal</b>	Display terminal configuration parameters
<b>upnp</b>	Display UPnP configurations
<b>user-privilege</b>	Users privilege configuration
<b>users</b>	Display information about terminal lines
<b>version</b>	System hardware and software status
<b>vlan</b>	VLAN status
<b>voice</b>	Voice appliance attributes
<b>web</b>	Web

The show commands are described in the following section.

## aaa

Display Login methods.

### SYNTAX

```
show aaa [ | {begin | exclude | include } <LINE>]
```

#### Parameters

	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

### EXAMPLE

```
SM24TBT2DPA# show aaa
console : local
telnet  : local
ssh      : local
http     : local
https    : no

## access

Display Access management.

### SYNTAX

```
show access management [ statistics | <access_id_list> ]
```

#### Parameters

<b>management</b>	Access management configuration
<b>statistics</b>	Statistics data
<b>&lt;AccessidList : 1~16&gt;</b>	ID of access management entry
	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

### EXAMPLE

```
SM24TBT2DPA# show access management
Switch access management mode is disabled
```

W: WEB/HTTPS

S: SNMP

T: TELNET/SSH

Idx	VID	Start IP Address	End IP Address	W	S	T
1	100	1.2.3.4	1.2.3.44			

```
SM24TBT2DPA# show access management statistics
```

Access Management Statistics:

HTTP	Receive:	0	Allow:	0	Discard:	0
HTTPS	Receive:	0	Allow:	0	Discard:	0
SNMP	Receive:	0	Allow:	0	Discard:	0
TELNET	Receive:	0	Allow:	0	Discard:	0
SSH	Receive:	0	Allow:	0	Discard:	0

```
SM24TBT2DPA#
```

## access-list

Show Access list parameters.

### SYNTAX

```
show access-list [ interface [ ( <port_type> [ <v_port_type_list> ] ) ] [ rate-limiter [ <rate_limiter_list> ] ] [ ace statistics [ <ace_list> ] ] ]  
show access-list ace-status [ static ] [ link-oam ] [ loop-protect ] [ dhcp ] [ ptp ] [ upnp ] [ arp-inspection ] [ mep ]  
[ ipmc ] [ ip-source-guard ] [ ip-mgmt ] [ sip ] [ dms-client ] [ dms-server ] [ dms-ssdp ] [ dms-onvif ] [ agv-car ]  
[ dms-mdns ] [ conflicts ] [ switch <switch_list> ]
```

### Parameters

<b>interface</b>	Select an interface to configure
*	All Switches or All Ports
<b>Gigabitethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24
<b>rate-limiter</b>	Rate limiter
<b>&lt; RateLimiterList : 1~16&gt;</b>	Rate limiter ID
<b>ace</b>	Access list entry
<b>statistics</b>	Traffic statistics
<b>&lt;Aceld : 1~256&gt;</b>	ACE ID
<b>ace-status</b>	The local ACEs status
<b>static</b>	The ACEs that are configured by users manually
<b>loop-protect</b>	The ACEs that are configured by Loop Protect module
<b>dhcp</b>	The ACEs that are configured by DHCP module
<b>upnp</b>	The ACEs that are configured by UPnP module
<b>arp-inspection</b>	The ACEs that are configured by ARP Inspection module
<b>mep</b>	The ACEs that are configured by MEP module
<b>ipmc</b>	The ACEs that are configured by IPMC module
<b>ip-source-guard</b>	The ACEs that are configured by IP Source Guard module
<b>ip-mgmt</b>	The ACEs that are configured by IP Management module
<b>conflicts</b>	The conflicts ACEs that does not applied to the hardware due to hardware limitations
	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

**EXAMPLE 1**

```
SM24TBT2DPA# show access-list ace statistics
ID  Type      Ing. Port Policy   Frame Type          Action Rate
L.  Port Redir. Mirror Counter
-----
1   GLOBAL     ALL      Any      ANY                Permit Disa
bled Disabled  Disabled 956
```

Switch access-list ace number: 1

```
SM24TBT2DPA# show access-list ace-status ?
|           Output modifiers
arp-inspection    The ACEs that are configured by ARP Inspection module
conflicts         The ACEs that did not get applied to the hardware due to
                  hardware limitations
dhcp              The ACEs that are configured by DHCP module
dms-client        The ACEs that are configured by DMS module
dms-mdns          The ACEs that are configured by DMS module
dms-onvif         The ACEs that are configured by DMS module
dms-server        The ACEs that are configured by DMS module
dms-ssdp          The ACEs that are configured by DMS module
ip-source-guard   The ACEs that are configured by IP Source Guard module
ipmc              The ACEs that are configured by IPMC module
loop-protect      The ACEs that are configured by Loop Protect module
static            The ACEs that are configured by users manually
upnp              The ACEs that are configured by UPnP module
<cr>
```

```
SM24TBT2DPA#
```

**EXAMPLE 2**

```
SM24TBT2DPA# show access-list rate-limiter
Switch access-list rate limiter ID 1 is 1 pps
Switch access-list rate limiter ID 2 is 1 pps
Switch access-list rate limiter ID 3 is 1 pps
Switch access-list rate limiter ID 4 is 1 pps
Switch access-list rate limiter ID 5 is 1 pps
Switch access-list rate limiter ID 6 is 1 pps
```

```
Switch access-list rate limiter ID 7 is 1 pps

----------	-----	---	----

```
Switch 1 access-list ace number: 1
```

```
SM24TBT2DPA#
```

## aggregation

Show Aggregation mode parameters.

### SYNTAX

```
show aggregation [ mode ] [ | {begin | exclude | include} <LINE>]
```

#### Parameters

<b>mode</b>	Traffic distribution mode
	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

### EXAMPLE

```
SM24TBT2DPA# show aggregation Mode
```

```
Aggregation Mode:
```

```
SMAC : Enabled  
DMAC : Disabled  
IP   : Enabled  
Port  : Enabled
```

```
SM24TBT2DPA#
```

```
SM24TBT2DPB# show aggregation mode
```

```
Aggregation Mode:
```

```
SMAC : Enabled  
DMAC : Enabled  
IP   : Enabled  
Port  : Enabled
```

```
SM24TBT2DPB#
```

## always-on-poe

Show Always On PoE status.

### SYNTAX

```
show { non-stop-poe | always-on-poe }
```

### Parameters

|      Output modifiers  
<cr>

### EXAMPLE

```
SM24TBT2DPA# show always-on-poe
Always On PoE Status : Disable
SM24TBT2DPA#
SM24TBT2DPB# show always-on-poe
Always On PoE Status : Enable
SM24TBT2DPB#
```

## clock

Show time-of-day clock settings.

### SYNTAX

```
show clock [detail]
```

### Parameters

**detail** Display detailed information

### EXAMPLE

```
SM24TBT2DPB# show clock
System Time      : 2022-09-08T07:25:38+00:00

SM24TBT2DPB# show clock detail
System Time      : 2022-09-08T07:25:44+00:00

Timezone : Timezone Offset : 0 ( 0 minutes)
Timezone Acronym :

Daylight Saving Time Mode : Disabled.
Daylight Saving Time Start Time Settings :
    Week: 0
    Day: 0
    Month: 0
    Date: 0
    Year: 0
    Hour: 0
    Minute: 0

Daylight Saving Time End Time Settings :
    Week: 0
    Day: 0
    Month: 0
    Date: 0
    Year: 0
    Hour: 0
    Minute: 0

Daylight Saving Time Offset : 1 (minutes)
SM24TBT2DPB#
```

## ***dhcp helper debug***

Display DHCP helper debug info.

### **SYNTAX**

**show dhcp helper debug**

### **EXAMPLE**

```
SM24TBT2DPA# show dhcp helper debug
```

```
DHCP helper
```

```
frame_info_cnt : 0
```

```
debug : disable
```

```
SM24TBT2DPA#
```

## dot1x

Display IEEE Standard for port-based Network Access Control.

### SYNTAX

```
show dot1x statistics { eapol | radius | all } [ interface ( <port_type> [ <v_port_type_list> ] ) ]
show dot1x status [ interface ( <port_type> [ <v_port_type_list> ] ) ] [ brief
```

### Parameters

<b>statistics</b>	Shows statistics for either eapol or radius.
<b>all</b>	Show all dot1x statistics
<b>eapol</b>	Show EAPOL statistics
<b>radius</b>	Show Backend Server statistics
<b>&lt;port_type&gt;</b>	GigabitEthernet
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet
<b>Status</b>	Shows dot1x status, such as admin state, port state and last source.
<b>brief</b>	Show status in a brief format
<b>interface</b>	Interface
*	All Switches or All Ports
<b>Gigabitethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet

### EXAMPLE

```
SM24TBT2DPA# show dot1x statistics all
GigabitEthernet 1/1 EAPOL Statistics:

Rx Total: 0 Tx Total: 0
Rx Response/Id: 0 Tx Request/Id: 0
Rx Response: 0 Tx Request: 0
Rx Start: 0
Rx Logoff: 0
Rx Invalid Type: 0
Rx Invalid Length: 0

GigabitEthernet 1/1 Backend Server Statistics:
```

Rx Access Challenges:	0	Tx Responses:	0
	0		
Rx Other Requests:	0		
Rx Auth. Successes:	0		
Rx Auth. Failures:	0		

**GigabitEthernet 1/2 EAPOL Statistics:****SM24TBT2DPA# show dot1 status****GigabitEthernet 1/1 :**

Admin State	Port State	Last Source	Last ID
-------------	------------	-------------	---------

Force Authorized	Globally Disabled	-	-
------------------	-------------------	---	---

Current Radius QOS	Current Radius VLAN	Current Guest VLAN
--------------------	---------------------	--------------------

**GigabitEthernet 1/2 :**

Admin State	Port State	Last Source	Last ID
-------------	------------	-------------	---------

Force Authorized	Globally Disabled	-	-
------------------	-------------------	---	---

Current Radius QOS	Current Radius VLAN	Current Guest VLAN
--------------------	---------------------	--------------------

**GigabitEthernet 1/3 :**

-- more --, next page: Space, continue: g, quit: ^C

## event

Display trap event configuration.

### SYNTAX

**show event <cr>**

### EXAMPLE

SM24TBT2DPA# **show event**

Group Name	Severity Level	Syslog Mode	Trap Mode	SMTP Mode
ACL	Info	enable	disable	disable
ACL-Log	Info	enable	disable	disable
Access-Mgmt	Info	enable	disable	disable
Auth-Failed	Warning	enable	disable	disable
Cold-Start	Warning	enable	disable	disable
Config-Info	Info	enable	disable	disable
DMS	Info	enable	disable	disable
Firmware-Upgrade	Info	enable	disable	disable

-- more --, next page: Space, continue: g, quit: ^C

## format

Display date and time format.

### SYNTAX

**show format <cr>**

### EXAMPLE

SM24TBT2DPA# **show format**

```
formatDateTime : disable
dateTime       : yyyy-mm-dd
timeFormat     : 24 hour
formatPortDesc : disable
SM24TBT2DPA#
```

## green-ethernet

Display Green Ethernet (Power reduction) information.

### SYNTAX

```
show green-ethernet [ interface ( <port_type> [ <port_list> ] )]
show green-ethernet eee [ interface ( <port_type> [ <port_list> ] )]
show green-ethernet energy-detect [ interface ( <port_type> [ <port_list> ] )]
show green-ethernet short-reach [ interface ( <port_type> [ <port_list> ] )]
```

### Parameters

<b>eee</b>	Shows green ethernet EEE status for a specific port or ports.
<b>energy-detect</b>	Shows green ethernet energy-detect status for a specific port or ports.
<b>interface</b>	Shows green ethernet status for a specific port or ports.
<b>short-reach</b>	Shows green ethernet short-reach status for a specific interface
*	All Switches or All ports
<b>&lt;port_type&gt;</b>	GigabitEthernet or
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet

### EXAMPLE

```
SM24TBT2DPA# show green-ethernet
Interface          Lnk  Energy-detect  Short-Reach  EEE Capable  EEE Enabled
LP EEE Capable    In Power Save
-----  ---  -----  -----  -----  -----  -----
-----  -----
GigabitEthernet 1/1      Yes  No          No        Yes        No
  No          No
GigabitEthernet 1/2      No   No          No        Yes        No
  No          No
GigabitEthernet 1/3      No   No          No        Yes        No
  No          No
GigabitEthernet 1/4      No   No          No        Yes        No
  No          No
GigabitEthernet 1/5      No   No          No        Yes        No
  No          No
GigabitEthernet 1/6      No   No          No        Yes        No
  No          No
GigabitEthernet 1/7      No   No          No        Yes        No
-- more --, next page: Space, continue: g, quit: ^C
```

## history

Display the session command history.

### SYNTAX

```
show history [ | {begin | exclude | include } <LINE>]
```

#### Parameters

	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

### EXAMPLE

```
SM24TBT2DPA# show history

con ter
dms mode high-priority
do dms enable
do show clock
dot1x feature guest-vlan
dot1x authentication timer inactivity 30000
enable 15
end
firmware upgrade tftp://192.168.1.30/path/sm24tbt2dpa.bin
ping ip 3 interval 4 repeat 1 size 3
reload defaults keep-ip
send * yes,i do
list
show non-stop-poe
show aaa
show broadcast-storm-protection
show broadcast-storm-protection interface GigabitEthernet 1/23-26
show clock
show clock detail
show dot1x statistics all
show dot1 status
show dhcp
-- more --, next page: Space, continue: g, quit: ^C
```

## interface

Display Interface status and configuration.

### SYNTAX

```
show interface ( <port_type> [ <in_port_list> ] ) switchport [ access | trunk | hybrid ]
show interface ( <port_type> [ <v_port_type_list> ] ) CableDiag
show interface ( <port_type> [ <v_port_type_list> ] ) capabilities [ detail ]
show interface ( <port_type> [ <v_port_type_list> ] ) description
show interface ( <port_type> [ <v_port_type_list> ] ) statistics [ { packets | bytes | errors | discards | filtered |
{ priority [ <priority_v_0_to_7> ] } } ][ { up | down } ]
show interface ( <port_type> [ <v_port_type_list> ] ) status
show interface vlan [ <vlist> ]
```

### Parameters

*	All Switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>vlan</b>	VLAN status
<b>PORT_LIST</b>	Port list for all port types
<b>CableDiag</b>	Display the latest cable diagnostic results.
<b>description</b>	Display port description.
<b>&lt;port_type&gt;</b>	Gigabit Ethernet
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet
<b>capabilities</b>	Display capabilities.
<b>statistics</b>	Display statistics counters.
<b>status</b>	Display status.
<b>switchport</b>	Show interface switchport information
<b>veriphy</b>	Run cable diagnostics and show result.
<b>bytes</b>	Show byte statistics.
<b>discards</b>	Show discard statistics.
<b>down</b>	Show ports which are down
<b>errors</b>	Show error statistics.
<b>filtered</b>	Show filtered statistics.
<b>packets</b>	Show packet statistics.
<b>priority</b>	Queue number
<b>up</b>	Show ports which are up
<b>&lt;vlist&gt;</b>	VLAN list

**EXAMPLE 1:** show interface (copper ports 1-3)

```
SM24TBT2DPA# show interface GigabitEthernet 1/1-3 capabilities
```

**GigabitEthernet 1/1 Capabilities:**

```
Connector Type      : none

show ip source binding [ dhcp-snooping | static ] [ interface ( <port_type> [ <in_port_type_list> ] ) ]
show ip ssh
show ip ssh key
show ip statistics [ system ] [ interface vlan <v_vlan_list> ] [ icmp ] [ icmp-msg <type> ]
show ip telnet
show ip verify source [ interface ( <port_type> [ <in_port_type_list> ] ) ]
```

**Parameters**

<b>arp</b>	Address Resolution Protocol
<b>inspection</b>	ARP inspection
<b>interface</b>	arp inspection entry interface config
<b>&lt;port_type&gt;</b>	Gigabit Ethernet
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet
<b>vlan</b>	VLAN configuration
<b>&lt;vlan_list&gt;</b>	Select a VLAN id to configure
<b>entry</b>	arp inspection entries
<b>dhcp-snooping</b>	learn from dhcp snooping
<b>static</b>	setting from static entries
<b>dhcp</b>	Dynamic Host Configuration Protocol
<b>relay</b>	DHCP relay agent configuration
<b>statistics</b>	Traffic statistics
<b>snooping</b>	DHCP snooping
<b>http</b>	Hypertext Transfer Protocol
<b>gateway</b>	IP gateway interface
<b>link-local</b>	Link-local interface
<b>server</b>	HTTP web server
<b>secure</b>	Secure
<b>status</b>	Status
<b>igmp</b>	Internet Group Management Protocol
<b>snooping</b>	Snooping IGMP
<b>vlan</b>	Search by VLAN
<b>&lt;vlan_list&gt;</b>	VLAN identifier(s): VID
<b>group-database</b>	Multicast group database from IGMP
<b>sfm-information</b>	Including source filter multicast information from IGMP
<b>detail</b>	Detail running information/statistics of IGMP snooping
<b>mrouter</b>	Multicast router port status in IGMP
<b>detail</b>	Detail running information/statistics of IGMP snooping
<b>interface</b>	IP interface status and configuration
<b>brief</b>	Brief IP interface status
<b>name-server</b>	Domain Name System
<b>route</b>	Display the current ip routing table
<b>binding</b>	ip source binding
<b>dhcp-snooping</b>	learn from dhcp snooping

<b>ssh</b>	Secure Shell
<b>system</b>	IPv4 system traffic
<b>icmp</b>	IPv4 ICMP traffic
<b>icmp-msg</b>	IPv4 ICMP traffic for designated message type
<b>&lt;0~255&gt;</b>	ICMP message type ranges from 0 to 255
<b>verify</b>	verify command
<b>source</b>	verify source

**EXAMPLE 1**

```
SM24TBT2DPA# show ip ssh
Switch SSH is enabled
Switch SSH port is 22
SM24TBT2DPA# show ip route
0.0.0.0/0 via 192.168.1.254 <UP GATEWAY HW_RT>
127.0.0.0/8 via 127.0.0.1 <UP>
127.0.0.1/32 via 127.0.0.1 <UP HOST>
169.254.0.0/16 via VLAN1 <UP HW_RT>
192.168.1.0/24 via VLAN1 <UP HW_RT>
SM24TBT2DPA#
```

**EXAMPLE 2**

```
SM24TBT2DPA# show ip link-local ?
    interface      show Link-Local address binding interface
SM24TBT2DPA# show ip link-local interface ?
    |      Output modifiers
    <cr>
SM24TBT2DPA# show ip link-local interface
Link-Local Address binding interface: 1
SM24TBT2DPA#
SM24TBT2DPA# show ip telnet
Switch Telnet server is enabled
Switch Telnet server port is 23
SM24TBT2DPA#
```

**EXAMPLE 3**

```
SM24TBT2DPA# show ip statistics system

IPv4 statistics:

Rcvd: 566758 total in 72974092 bytes

```

```
SM24TBT2DPA#
```

**Link-Local Address binding interface:** Configure Link-Local IP address to different VLAN interface. The first IP interface entry is for default value.

**Gateway Address binding interface:** The DHCP client uses the DHCP protocol to get the gateway address, and sets the gateway address to the interface of the binding.

## ipmc

Display IPv4/IPv6 multicast configuration.

### SYNTAX

```
show ipmc profile [ <profile_name> ] [ detail ]
```

```
show ipmc range [ <entry_name> ]
```

### Parameters

<b>profile</b>	IPMC profile configuration
<b>range</b>	A range of IPv4/IPv6 multicast addresses for the profile
<b>&lt;ProfileName : word16&gt;</b>	Profile name in 16 char's
<b>detail</b>	Detail information of a profile
<b>&lt;EntryName : word16&gt;</b>	Range entry name in 16 char's
<b> </b>	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

### EXAMPLE

```
SM24TBT2DPB# show ipmc profile
```

IPMC Profile is now enabled to start filtering.

```
Profile: Prof1 (In VER-INI Mode)
```

```
Description: firstIpmcProfile
```

```
Profile: Prof2 (In VER-INI Mode)
```

```
Description: Second IPMC profile
```

```
SM24TBT2DPB# show ipmc range Range1
```

```
% Invalid range name Range1.
```

```
SM24TBT2DPB#
```

### Messages:

*IPMC Profile is currently disabled, please enable profile to start filtering.*

*% Invalid range name Range1.*

## ipv6

Display IPv6 configuration commands.

### SYNTAX

```
show ipv6 interface [ vlan <v_vlan_list> { brief | statistics } ]
show ipv6 mld snooping [ vlan <v_vlan_list> ] [ group-database [ interface ( <port_type>
[ <v_port_type_list> ] ) ] [ sfm-information ] ] [ detail ]
show ipv6 mld snooping mrouter [ detail ]
show ipv6 neighbor [ interface vlan <v_vlan_list> ]
show ipv6 route [ interface vlan <v_vlan_list> ]
show ipv6 statistics [ system ] [ interface vlan <v_vlan_list> ] [ icmp ] [ icmp-msg <type> ]
```

### Parameters

<b>interface</b>	Select an interface to configure
<b>vlan</b>	VLAN of IPv6 interface
<b>&lt;vlan_list&gt;</b>	IPv6 interface VLAN list
<b>brief</b>	Brief summary of IPv6 status and configuration
<b>statistics</b>	Traffic statistics
<b>mld</b>	Multicasat Listener Discovery
<b>snooping</b>	Snooping MLD
<b>vlan</b>	Search by VLAN
<b>&lt;vlan_list&gt;</b>	VLAN identifier(s): VID
<b>group-database</b>	Multicast group database from MLD
<b>interface</b>	Search by port
<b>&lt;port_type&gt;</b>	Gigabit Ethernet
*	All Switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet
<b>sfm-information</b>	Including source filter multicast information from MLD
<b>detail</b>	Detail running information/statistics of MLD snooping
<b>mrouter</b>	Multicast router port status in MLD
<b>neighbor</b>	IPv6 neighbors
<b>route</b>	IPv6 routes
<b>statistics</b>	Traffic statistics
<b>system</b>	IPv6 system traffic
<b>icmp</b>	IPv6 ICMP traffic
<b>icmp-msg</b>	IPv6 ICMP traffic for designated message type

<Type : 0~255> ICMP message type ranges from 0 to 255

#### EXAMPLE

```
SM24TBT2DPA# show ipv6 neighbor  
fe80::2c0:f2ff:fe7f:685b via VLAN1: 00-c0-f2-7f-68-5b Permanent/REACHABLE  
SM24TBT2DPA# show ipv6 statistics system
```

IPv6 statistics:

```
Rcvd: 0 total in 0 byte  
      0 local destination, 0 forwarding  
      0 header error, 0 address error, 0 unknown protocol  
      0 no route, 0 truncated, 0 discarded  
Sent: 10 total in 656 bytes  
      14 generated, 0 forwarded  
      0 no route, 0 discarded  
Frags: 0 reassemble (0 reassembled, 0 couldn't reassemble)  
      0 fragment (0 fragmented, 0 couldn't fragment)  
      0 fragment created  
Mcast: 0 received in 0 byte  
      10 sent in 656 bytes  
Bcast: 0 received, 0 sent
```

```
SM24TBT2DPB# show ipv6 interface vlan 1 brief
```

```
IPv6 Vlan1 interface is up.  
Internet address is fe80::2c0:f2ff:fe7f:685b  
Static address is not set  
SM24TBT2DPB#
```

## lacp

Display LACP configuration/status.

### SYNTAX

```
show lacp { internal | statistics | system-id | neighbour }
```

#### Parameters

<b>internal</b>	Internal LACP configuration
<b>neighbour</b>	Neighbour LACP status
<b>statistics</b>	Internal LACP statistics
<b>system-id</b>	LACP system id
<b> </b>	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

### EXAMPLE

```
SM24TBT2DPA# show lacp internal
Port          Mode   Key   Role    Timeout  Priority
-----        -----  -----  -----  -----
Gi 1/1         Disabled Auto  Active  Fast     32768
Gi 1/2         Disabled Auto  Active  Fast     32768
Gi 1/3         Disabled Auto  Active  Fast     32768
Gi 1/4         Disabled Auto  Active  Fast     32768
Gi 1/5         Disabled Auto  Active  Fast     32768
Gi 1/6         Disabled Auto  Active  Fast     32768
Gi 1/7         Disabled Auto  Active  Fast     32768
Gi 1/8         Disabled Auto  Active  Fast     32768
Gi 1/9         Disabled Auto  Active  Fast     32768
Gi 1/10        Disabled Auto  Active  Fast     32768
-- more --, next page: Space, continue: g, quit: ^C
SM24TBT2DPB# show lacp system-id
System Priority: 32768
SM24TBT2DPB# show lacp neighbour
SM24TBT2DPB#
```

## line

Display TTY line information.

### SYNTAX

```
show line [ alive ] [ {begin | exclude | include } <LINE>]
```

### Parameters

<b>alive</b>	Display information about alive lines
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

### EXAMPLE

```
SM24TBT2DPA# show line

Line is con 0.

* You are at this line now.

Alive from Console.

Default privileged level is 2.

Command line editing is disabled

Display EXEC banner is enabled.

Display Day banner is enabled.

Terminal width is 80.

    length is 24.

    history size is 10.

    exec-timeout is 60 min 0 second.

Current session privilege is 15.

Elapsed time is 0 day 2 hour 35 min 47 sec.

Idle time is 0 day 0 hour 0 min 0 sec.

Line is vty 0.

Not alive.

Default privileged level is 2.

Command line editing is disabled

Display EXEC banner is enabled.

Display Day banner is enabled.

-- more --, next page: Space, continue: g, quit: ^C
```

***lldp***

Display LLDP neighbors and LLDP Med information.

**SYNTAX**

```
show lldp [ interface ( <port_type> [ <v_port_type_list> ] ) ]
show lldp med media-vlan-policy [ <v_0_to_31> ]
show lldp med remote-device [ interface ( <port_type> [ <port_list> ] ) ]
show lldp neighbors [ interface ( <port_type> [ <v_port_type_list> ] ) ]
show lldp statistics [ interface ( <port_type> [ <v_port_type_list> ] ) ]
```

**Parameters**

<b>med</b>	Display LLDP-MED neighbors information.
<b>neighbors</b>	Display LLDP neighbors information.
<b>statistics</b>	Display LLDP statistics information.
<b>media-vlan-policy</b>	Display media vlan policies.
<b>remote-device</b>	Display remote device LLDP-MED neighbors information.
<b>&lt;0~31&gt;</b>	List of policies.
<b>Interface</b>	Interface to display.
<b>&lt;port_type&gt;</b>	GigabitEthernet
*	All Switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-26 for Gigabit Ethernet

**EXAMPLE 1**

```
SM24TBT2DPA# show lldp interface GigabitEthernet 1/1-2

**Messages:** No LLDP entries found

## logging

Display Syslog information.

### SYNTAX

```
show logging <log_id> [ switch <switch_list> ]  
show logging [ info ] [ warning ] [ error ] [ emerg ] [ alert ] [ crit ] [ notice ] [ debug ] [ switch <switch_list> ]
```

### Parameters

<logging_id: 1-4294967295>	Logging ID
alert	Alert
crit	Critical
debug	Debug
emerg	Emergency
error	Error
info	Information
notice	Notice
warning	Warning
switch	Switch
<switch_list>	Switch ID list in 1

### EXAMPLE 1

```
SM24TBT2DPB# show logging alert  
Switch logging host mode is disabled  
Switch logging host address is null  
Switch logging host port is 514  
Number of entries on Switch 1:  
Emerg : 0  
Alert : 0

Error : 0  
Warning: 37  
Notice : 0  
Info : 29  
Debug : 0  
All : 66  
SM24TBT2DPB#
```

**Messages:** Cannot find syslog ID 99999999 on Switch 1.

## loop-protect

Show Loop protection configuration.

### SYNTAX

```
show loop-protect [ interface ( <port_type> [ <plist> ] ) ]
```

### Parameters

<b>interface</b>	Interface status and configuration
<b>&lt;port_type&gt;</b>	GigabitEthernet
*	All Switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-26 for Gigabit Ethernet

### EXAMPLE

```
SM24TBT2DPA# show loop-protect interface GigabitEthernet 1/3
```

```
Loop Protection Configuration
=====
Loop Protection    : Disable
Transmission Time : 5 sec
Shutdown Time     : 180 sec

GigabitEthernet 1/3
-----
Loop protect mode is enabled.
Action is shutdown.
Transmit mode is enabled.
No loop.
The number of loops is 0.
Status is up.

SM24TBT2DPA#
```

**mac**

Show Mac Address Table information.

**SYNTAX**

```
show mac address-table [ conf | static | aging-time | { { learning | count } [ interface ( <port_type>  
[ <v_port_type_list> ] ) } | { address <v_mac_addr> [ vlan <v_vlan_id> ] } | vlan <v_vlan_id_1> | interface  
( <port_type> [ <v_port_type_list_1> ] ) ]
```

**Parameters**

	Output modifiers
address	MAC address lookup
aging-time	Aging time
conf	User added static mac addresses
count	Total number of mac addresses
interface	Select an interface to configure
learning	Learn/disable/secure state
static	All static mac addresses
vlan	Addresses in this VLAN
<b>address-table</b>	Mac Address Table
<b>&lt;port_type&gt;</b>	Gigabit Ethernet
*	All switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24
<b>&lt;mac_addr&gt;</b>	48 bit MAC address: xx:xx:xx:xx:xx:xx
<b>vlan</b>	VLAN lookup
<b>&lt;vlan_id&gt;</b>	VLAN IDs 1-4095
<b>&lt;vlan_id&gt;</b>	VLAN IDs 1-4095
<b>&lt;port_type&gt;</b>	1 Gbit Ethernet
*	All Switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet
	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

**EXAMPLE**

```
SM24TBT2DPA# show mac address-table
Type      VID   MAC Address          Ports
Dynamic   1     00:1b:11:b2:6d:4b  GigabitEthernet 1/1
Static    1     00:c0:f2:4a:fb:3f  CPU

SM24TBT2DPA#
```

## ***map-api-key***

Show Google Maps API key string.

### **SYNTAX**

**show map-api-key**

### **EXAMPLE**

```
SM24TBT2DPA(config)# map-api-key sedfal9mm
SM24TBT2DPA(config)# exit
SM24TBT2DPA# show map-api-key
Key    : sedfal9mm
SM24TBT2DPA#
```

**mvr**

Show Multicast VLAN Registration configuration.

**SYNTAX**

```
show mvr [ vlan <v_vlan_list> | name <mvr_name> ] [ group-database [ interface ( <port_type>
[ <v_port_type_list> ] ) ] [ sfm-information ] ] [ detail ]
```

**Parameters**

<b>vlan</b>	Search by VLAN
<b>&lt;v_vlan_list&gt;</b>	MVR multicast VLAN list
<b>name</b>	Search by MVR name
<b>&lt;word16&gt;</b>	MVR multicast VLAN name
<b>group-database</b>	Multicast group database from MVR
<b>interface</b>	Search by port
<b>&lt;port_type&gt;</b>	* or Gigabit Ethernet
*	All Switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet
<b>sfm-information</b>	Including source filter multicast information from MVR
<b>detail</b>	Detail information/statistics of MVR group database
	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

**EXAMPLE**

```
SM24TBT2DPA# show mvr
MVR is currently disabled, please enable MVR to start group registration.

SM24TBT2DPA#
SM24TBT2DPA# show mvr
MVR is now enabled to start group registration.

Switch-1 MVR-IGMP Interface Status

IGMP MVR VLAN 10 (Name is MVRCFG1) interface is enabled.

Querier status is IDLE

```

***ntp***

Show Network Timing Protocol status.

**SYNTAX**

**show ntp status**

**Parameter**

**status**            status

**EXAMPLE**

```
SM24TBT2DPA# show ntp status
NTP Mode : disabled
Automatic: enabled
Idx   Server IP host address (a.b.c.d)
-----
1

Idx   Server IP host address (a.b.c.d) or a host name string
-----
1   1.2.3.4
2   time-a-g.nist.gov
3
4
5
SM24TBT2DPA#
```

## platform

Show Platform specific information

### SYNTAX

```
show platform phy [ interface ( <port_type> [ <v_port_type_list> ] ) ]
show platform phy id [ interface ( <port_type> [ <v_port_type_list> ] ) ]
show platform phy instance
show platform phy status [ interface ( <port_type> [ <v_port_type_list> ] ) ]
```

### Parameters

<b>phy</b>	PHYs' information
<b>id</b>	
<b>instance</b>	PHY Instance Information
<b>interface</b>	
<b>status</b>	
<cr>	
*	All switches or All ports
GigabitEthernet	1 Gigabit Ethernet Port
PORT_LIST	Port list in 1/1-26

### EXAMPLE 1

SM24TBT2DPA# show platform phy id					
Port	Channel	API Base	Phy Id	Phy Rev.	
1	0	0 (1g)	7420	3	
2	1	0 (1g)	7420	3	
3	2	0 (1g)	7420	3	
4	3	0 (1g)	7420	3	
5	4	0 (1g)	7420	3	
6	5	0 (1g)	7420	3

Previous Restart: Warm
Current API Version : 1
Previous API Version: 1
Phy Instance Restart Source:1G
Phy Instance Restart Port:0
Current Phy Start Instance:none
SM24TBT2DPB#
```

**poe**

Show PoE information.

**SYNTAX**

```
show poe config [ interface ( <port_type> [ <v_port_type_list> ] )]
show poe power-delay [ interface ( <port_type> [ <v_port_type_list> ] )]
show poe profile [ id <has_id> ]
show poe reboot
show poe status [ interface ( <port_type> [ <v_port_type_list> ] )]
show poe { auto-check | auto-power-reset } [ interface ( <port_type> [ <v_port_type_list> ] )]
```

**Parameters**

<b>auto-power-reset</b>	Show PoE Auto Power Reset configuration.
<b>config</b>	Display PoE (Power Over Ethernet) config for the switch.
<b>power-delay</b>	Display PoE (Power Over Ethernet) power delay for the switch.
<b>profile</b>	poe scheduling profile
<b>reboot</b>	poe reboot scheduling
<b>status</b>	Display PoE (Power Over Ethernet) status for the switch.
*	All switches or All ports
GigabitEthernet	1 Gigabit Ethernet Port
	Output modifiers
<port_type_list>	Port list for all port types

**EXAMPLE 1** Show PoE Auto Power Reset (APR) status:

```
SM24TBT2DPA# show poe auto-power-reset

Ping Check : Enabled

Port  Ping IP Address Start up Interval Retry Failure Log      Failure Action
Reboot Max.Reboot

Total Power Allocated : 5.8 [W]			
Total Power Used : 5.8 [W]			
Total Current Used : 111 [mA]			
<hr/>			

## port-security

Show Port Security information.

### SYNTAX

```
show port-security port [ interface ( <port_type> [ <v_port_type_list> ] ) ]
show port-security switch [ interface ( <port_type> [ <v_port_type_list> ] ) ]
```

### Parameters

**port** Show MAC Addresses learned by Port Security

**switch** Show Port Security status.

#### Interface

**<port\_type>** GigabitEthernet

**\*** All Switches or All ports

**Gigabit Ethernet** 1 Gigabit Ethernet Port

**<port\_type\_list>** Port list in 1/1-24 for Gigabit Ethernet

**|** Output modifiers

**begin** Begin with the line that matches

**exclude** Exclude lines that match

**include** Include lines that match

**<LINE>** String to match output lines

### EXAMPLE

```
SM24TBT2DPA# show port-security port
GigabitEthernet 1/1
-----
MAC Address      VID  State      Added          Age/Hold Time
-----
<none>

GigabitEthernet 1/2
-----
MAC Address      VID  State      Added          Age/Hold Time
-----
<none>

GigabitEthernet 1/3
-----
```

MAC Address	VID	State	Added	Age/Hold Time

<b>SM24TBT2DPA#</b>				

## power

### SYNTAX

```
show power management
```

### Parameters

management Management.

**EXAMPLE 1:** SM24TBT2DPA with one PSU-820 power supply installed in Boost mode:

```
SM24TBT2DPA# show power management
```

Power Management

```
=====
Power : A      B
Detected PSU : PSU-820 None
Power Good : Good   Fail
FAN Speed (RPM) : 8898  0
Temperature (Degree C) : 30   0
Operating Mode : Boost
```

```
SM24TBT2DPA#
```

**EXAMPLE 2:** SM24TBT2DPB with two PSU-HV power supplies installed in Redundant mode:

```
SM24TBT2DPB# show power management
```

Power Management

```
=====
Power : A      B
Detected PSU : PSU-HV  PSU-HV
Power Good : Good   Good
Power Input(AC/DC) : AC      AC
Power Input Voltage (V) : 121   121
FAN Speed (RPM) : 2886  3007
Temperature (Degree C) : 41    42
Operating Mode : Redundant
```

```
SM24TBT2DPB#
```

**EXAMPLE 3:** SM24TBT2DPB with one PSU-HV power supply installed:

```
SM24TBT2DPB# show power management

Power Management
=====
Power : A      B
Detected PSU : PSU-HV  None
Power Good : Good  Fail
FAN Speed (RPM) : 3014  0
Temperature (Degree C) : 40  0
Operating Mode : Redundant

SM24TBT2DPB#
```

## privilege

### SYNTAX

```
show privilege [ | {begin | exclude | include } <LINE>
```

### Parameters

	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match

### EXAMPLE

```
SM24TBT2DPA# show privilege
```

```
-----
|   The order is as the input sequence and   |
|   the last one has the highest priority.   |
-----
privilege line level 5 LINE
```

## pvlan

Show PVLAN status.

### SYNTAX

```
show pvlan [ <pvlan_list> ]  
show pvlan isolation [ interface ( <port_type> [ <plist> ] ) ]
```

### Parameters

<range_list>	PVLAN id to show configuration for
<b>isolation</b>	show isolation configuration
<port_type>	GigabitEthernet
*	All Switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
interface	List of port type and port ID, ex, Fast 1/1 Gigabit 2/3-5 Gigabit 3/2-4 Tengigabit 4/6
<port_type_list>	Port list in 1/1-24 for Gigabit Ethernet
	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<LINE>	String to match output lines

### EXAMPLE

```
SM24TBT2DPA# show pvlan 1  
PVLAN ID Ports  
-----  
1 GigabitEthernet 1/1, GigabitEthernet 1/2, GigabitEthernet 1/3,  
GigabitEthernet 1/4, GigabitEthernet 1/5, GigabitEthernet 1/6,  
GigabitEthernet 1/7, GigabitEthernet 1/8, GigabitEthernet 1/9,  
GigabitEthernet 1/10, GigabitEthernet 1/11, GigabitEthernet 1/12,  
GigabitEthernet 1/13, GigabitEthernet 1/14, GigabitEthernet 1/15,  
GigabitEthernet 1/16, GigabitEthernet 1/17, GigabitEthernet 1/18,  
GigabitEthernet 1/19, GigabitEthernet 1/20, GigabitEthernet 1/21,  
GigabitEthernet 1/22, GigabitEthernet 1/23, GigabitEthernet 1/24,  
GigabitEthernet 1/25, GigabitEthernet 1/26  
  
SM24TBT2DPA# show pvlan isolation  
Port Isolation  
-----
```

## **qos**

Show Quality of Service data.

### **SYNTAX**

```
show qos [ { interface [ ( <port_type> [ <port> ] ) ] } | wred | { maps [ dscp-cos ] [ dscp-ingress-translation ] [ dscp-classify ] [ cos-dscp ] [ dscp-egress-translation ] } | storm | { qce [ <qce> ] } ]
```

### **Parameters**

<b>interface</b>	Interface
<b>&lt;port_type&gt;</b>	GigabitEthernet
*	All switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet
<b>maps</b>	Global QoS Maps/Tables
<b>qce</b>	QoS Control Entry
<b>storm</b>	Storm policer
<b>wred</b>	Weighted Random Early Discard
<b>cos-dscp</b>	Map for cos to dscp
<b>dscp-classify</b>	Map for dscp classify enable
<b>dscp-cos</b>	Map for dscp to cos
<b>dscp-egress-translation</b>	Map for dscp egress translation
<b>dscp-ingress-translation</b>	Map for dscp ingress translation
<b>&lt;Qce : 1-256&gt;</b>	QCE ID
	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

### **EXAMPLE**

```
SM24TBT2DPA# show qos

interface GigabitEthernet 1/1
  qos cos 0
  qos pcp 0
  qos dpl 0
  qos dei 0
  qos trust tag disabled
  qos map tag-cos pcp 0 dei 0 cos 1 dpl 0
```

```
qos map tag-cos pcp 0 dei 1 cos 1 dpl 1

## ***radius-server***

Display RADIUS configuration.

### **SYNTAX**

**show radius-server [ statistics ]**

#### **Parameters**

radius-server    RADIUS configuration

<cr>

### **EXAMPLE**

```
SM24TBT2DPA# show radius-server

Global RADIUS Server Timeout      : 5 seconds
Global RADIUS Server Retransmit   : 3 times
Global RADIUS Server Deadtime     : 0 minutes
Global RADIUS Server Key          : a8ae00879ff20e729f827a150b01a2a54007cffc758c
30f46a4908fddf165d7fa9f8105fbec27193d036ebf5be3a0baee0cb0bfa40cddc7c9e7b8d1080e5
0ee6
Global RADIUS Server Attribute 4  : 192.168.1.3
Global RADIUS Server Attribute 95 :
Global RADIUS Server Attribute 32 :
RADIUS Server #1:
  Host name  : RadSrvr1
  Auth port   : 1812
  Acct port   : 1813
  Timeout     : 60 seconds
  Retransmit  : 350 times
  Key         : 996cd8e785af8137672f36005e765fe5854c439cb918cd7d12c6a2e5975c0a9c1

SM24TBT2DPA#
```

## ***rapid-ring***

Display Rapid Ring configuration. STP must be disabled.

### **SYNTAX**

```
show rapid-ring <cr>
```

### **Parameters**

### **EXAMPLE**

```
SM24TBT2DPB# show rapid-ring
Entry Index : 1
Rapid Ring Role : Disabled
Rapid Ring Port 1 : 25
Rapid Ring Port 2 : 26
Rapid Ring Port 1 State : Forwarding
Rapid Ring Port 2 State : Forwarding
```

```
SM24TBT2DPB# show rapid-ring
Entry Index : 1
Rapid Ring Role : Master
Rapid Ring Port 1 : 25
Rapid Ring Port 2 : 26
Rapid Ring Port 1 State : Discarding
Rapid Ring Port 2 State : Discarding
```

```
SM24TBT2DPB#
```

## rmon

Display RMON statistics.

### SYNTAX

```
show rmon alarm [ <id_list> ]
show rmon event [ <id_list> ]
show rmon history [ <id_list> ]
show rmon statistics [ <id_list> ]
```

### Parameters

<b>alarm</b>	Display the RMON alarm table
<b>event</b>	Display the RMON event table
<b>history</b>	Display the RMON history table
<b>statistics</b>	Display the RMON statistics table
<b>&lt;1~65535&gt;</b>	Alarm/Event/History/Statistics entry list

### EXAMPLE

```
SM24TBT2DPA# show rmon event 1

Event ID :      1
-----
Description      : one
Type            : logandtrap
Community       : public
LastSent        : Never

SM24TBT2DPA# show rmon history

History ID :      1
-----
Data Source      : .1.3.6.1.2.1.2.2.1.1.11
Data Bucket Request : 50
Data Bucket Granted : 50
Data Interval     : 1800

SM24TBT2DPA#
SM24TBT2DPA# show rmon statistics 1

Statistics ID :      1

etherStatsPkts512to10230ctets : 0
etherStatsPkts1024to15180ctets: 0
```

SM24TBT2DPA#

## ***running-config***

Show running system information.

### **SYNTAX**

```
show running-config [ all-defaults ]  
show running-config feature <feature_name> [ all-defaults ]  
show running-config interface ( <port_type> [ <list> ] ) [ all-defaults ]  
show running-config interface vlan <list> [ all-defaults ]  
show running-config line { console | vty } <list> [ all-defaults ]  
show running-config vlan <list> [ all-defaults ]
```

### **Parameters**

<b>all-defaults</b>	Include most/all default values
<b>feature</b>	Show configuration for specific feature
<b>interface</b>	Show specific interface(s)
<b>line</b>	Show line settings
<b>vlan</b>	VLAN
<b>CWORD</b>	Valid words are 'GVRP' 'access' 'access-list' 'activate' 'aggregation' 'arp-inspection' 'auth' 'broadcast-storm-protection' 'cli_telnet' 'clock' 'dhcp' 'dhcp-snooping' 'dhcp_server' 'dms server' 'dns' 'dot1x' 'green-ethernet' 'http' 'icli' 'ip-igmp-snooping' 'ip-igmp-snooping-port' 'ip-igmp-snooping-vlan' 'ipmc-profile' 'ipmc-profile-range' 'ipv4' 'ipv6' 'ipv6-mld-snooping' 'ipv6-mld-snooping-port' 'ipv6-mld-snooping-vlan' 'lacp' 'lldp' 'logging' 'loop-protect' 'mac' 'monitor' 'mstp' 'mvr' 'mvr-port' 'ntp' 'phy' 'poe' 'port' 'port-security' 'push_notification' 'pvlan' 'qos' 'rmon' 'sflow' 'smtp' 'snmp' 'source-guard' 'ssh' 'system' 'trap_event' 'upnp' 'user' 'vlan' 'voice-vlan' 'vtun' 'web' 'web-privilege-group-level'
<b>&lt;port_type&gt;</b>	GigabitEthernet
*	All switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet
<b>&lt;vlan_list&gt;</b>	List of VLAN numbers
<b>console</b>	Console
<b>vty</b>	VTY
<b>&lt;range_list&gt;</b>	List of console/VTYs

### **EXAMPLE**

## sflow

Display Statistics flow information.

### SYNTAX

```
show sflow statistics { receiver [ <rcvr_idx_list> ] | samplers [ interface [ <samplers_list> ] ( <port_type> [ <v_port_type_list> ] ) ] }
```

### Parameters

<b>statistics</b>	sFlow statistics.
<b>receiver</b>	Show statistics for receiver.
<b>samplers</b>	Show statistics for samplers.
<b>&lt;range_list&gt;</b>	runtime, see sflow_icli_functions.c
<b>&lt;port_type&gt;</b>	GigabitEthernet
*	All switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-26 for Gigabit Ethernet

### EXAMPLE 1

```
SM24TBT2DPA# show sflow

Agent Configuration:
=====
Agent Address: 127.0.0.1

Receiver Configuration:
=====
Owner      : <none>
Receiver   : 0.0.0.0
UDP Port   : 6343
Max. Datagram: 1400 bytes
Time left   : 0 seconds

No enabled collectors (receivers). Skipping displaying per-port info.
```

**EXAMPLE 2**

```
SM24TBT2DPA# show sflow statistics receiver
Tx Successes      Tx Errors       Flow Samples     Counter Samples
-----  -----  -----
          0           0            0                 0
```

```
SM24TBT2DPA# show sflow statistics samplers
```

Per-Port Statistics:

Interface	Rx Flow Samples	Tx Flow Samples	Counter Samples
GigabitEthernet 1/1	0	0	0
GigabitEthernet 1/2	0	0	0
GigabitEthernet 1/3	0	0	0
GigabitEthernet 1/4	0	0	0
GigabitEthernet 1/5	0	0	0
GigabitEthernet 1/6	0	0	0

Email Adress 2   :
Email Adress 3   :
Email Adress 4   :
Email Adress 5   :
Email Adress 6   :
SM24TBT2DPA#
```

## snmp

Display SNMP configuration.

### SYNTAX

```
show snmp
show snmp access [ <group_name> { v1 | v2c | v3 | any } { auth | noauth | priv } ]
show snmp community v3 [ <community> ]
show snmp host [ <conf_name> ] [ system ] [ switch ] [ interface ] [ aaa ]
show snmp info
show snmp mib context
show snmp mib ifmib ifIndex
show snmp security-to-group [ { v1 | v2c | v3 } <security_name> ]
show snmp user [ <username> <engineID> ]
show snmp view [ <view_name> <oid_subtree> ]
```

### Parameters

	Output modifiers
<b>access</b>	access configuration
<b>community</b>	Community
<b>host</b>	Set SNMP host's configurations
<b>info</b>	SNMP <b>info</b>
<b>mib</b>	MIB (Management Information Base)
<b>security-to-group</b>	security-to-group configuration
<b>user</b>	User
<b>view</b>	MIB view configuration
any	any security model
v1	v1 security model
v2c	v2c security model
v3	v3 security model
auth	authNoPriv Security Level
noauth	noAuthNoPriv Security Level
priv	authPriv Security Level
v3	SNMPv3
<Community : word127>	Specify community name
<GroupName : word32>	group name
<ConfName : word32>	Name of the host configuration
aaa	AAA event group

interface	Interface event group
switch	Switch event group
system	System event group
context	MIB context
ifmib	IF-MIB
ifIndex	The IfIndex that is defined in IF-MIB
<SecurityName : word32>	security group name
<Username : word32>	Security user name
<Engiedid : word10-32>	Security Engine ID
<ViewName : word32>	MIB view name
<OidSubtree : word255>	MIB view OID

**EXAMPLE 1**

```
SM24TBT2DPA# show snmp user
User Name          : default_user

## spanning-tree

Show STP Bridge configuration.

### SYNTAX

```
show spanning-tree [ summary | active | { interface ( <port_type> [ <v_port_type_list> ] ) } | { detailed [ interface ( <port_type> [ <v_port_type_list_1> ] ) ] } | { mst [ configuration | { <instance> [ interface ( <port_type> [ <v_port_type_list_2> ] ) ] } ] } ]
```

### Parameters

<b>active</b>	STP active interfaces
<b>detailed</b>	STP statistics
<b>interface</b>	Choose port
<b>interface</b>	List of port type and port ID, ex, 1/1-24
<b>mst</b>	Configuration
<b>summary</b>	STP summary
*	All switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-26 for Gigabit Ethernet
<b>interface</b>	List of port type and port ID, ex, Fast 1/1 Gigabit 2/3-5 Gigabit 3/2-4 Tengigabit 4/6
<b>configuration</b>	STP bridge instance number (0-7, CIST=0, MST2=1...)
<b>&lt;0-7&gt;</b>	Choose port
<b>&lt;port_type&gt;</b>	GigabitEthernet
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-26 for Gigabit Ethernet

### EXAMPLE 1

```
SM24TBT2DPA# show spanning-tree summary
Protocol Version: MSTP
Max Age      : 20
Forward Delay : 15
Tx Hold Count : 6
Max Hop Count : 20
BPDU Filtering : Disabled
BPDU Guard     : Disabled
Error Recovery : Disabled
CIST Bridge is active
SM24TBT2DPA#
```

**EXAMPLE 2**

```

SM24TBT2DPA#
```

## switchport

Display switching mode characteristics.

### SYNTAX

```
show switchport forbidden [ { vlan <vid> } | { name <name> } ]
```

### Parameters

<b>forbidden</b>	Lookup VLAN Forbidden port entry.
<b>name</b>	name - Show forbidden access for specific VLAN name.
<b>vlan</b>	vid - Show forbidden access for specific VLAN ID.
<b>&lt;vlan_id&gt;</b>	VLAN id
<b>&lt;word&gt;</b>	VLAN name
<b> </b>	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

### EXAMPLE

```
SM24TBT2DPB# show switchport forbidden
VID    Interfaces
-----
9      8
100   1
200   7

SM24TBT2DPB# show switchport forbidden vlan 100
VID    Interfaces
-----
100   1

SM24TBT2DPB#
```

### Messages:

*Forbidden VLAN table is empty*

## system

Show system information.

### SYNTAX

```
show system  
show system cpu status  
show system reboot
```

#### Parameters

cpu	CPU
reboot	Switch reboot scheduling
status	Average load

### EXAMPLE 1

```
SM24TBT2DPB# show system  
Model Name : SM24TBT2DPB  
System Description : Managed Switch, 24-port Gigabit PoE++, 2-  
port SFP/RJ-45 Combo  
Location :  
Contact :  
System Name : SM24TBT2DPB  
System Date : 2024-05-14T14:16:21+00:00  
System Uptime : 5d 00:58:35  
Bootloader Version : v1.15g  
Firmware Version : VB6.64.0123 2024-05-14  
PoE Firmware Version : 200-352  
Hardware Version : v3.01  
Mechanical Version : v1.01  
Serial Number : A206122AR3300181  
MAC Address : 00-c0-f2-83-83-28  
Memory : Total=70473 KBytes, Free=46804 KBytes,  
Max=45699 KBytes  
FLASH : 0x40000000-0x41fffff, 512 x 0x10000 blocks  
SM24TBT2DPB#
```

**EXAMPLE 2**

```
SM24TBT2DPA# show system cpu status
  Average load in 100 ms : 32%
  Average load in 1 sec : 10%
  Average load in 10 sec : 11%
SM24TBT2DPA# show system reboot
```

Switch Reboot Mode: Enable

Switch Reboot Entry:

**Reboot Time**

Week Day	HH : MM
Monday	12 5
Tuesday	0 5
Wednesday	0 5
Thursday	0 5
Friday	4 5
Saturday	1 5
Sunday	18 5

```
SM24TBT2DPB#
```

## tacacs-server

Show TACACS+ configuration.

### SYNTAX

```
show tacacs-server [ | {begin | exclude | include } <LINE>
```

#### Parameters

	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

### EXAMPLE

```
SM24TBT2DPA# show tacacs-server

Global TACACS+ Server Timeout      : 5 seconds
Global TACACS+ Server Deadtime     : 0 minutes
Global TACACS+ Server Key          : cbc71a674ca5ed2e656449d68eadc2f55e18d5fac77
bee4d5d2011440d00a010081114cf301a74b1f2e9ff0047a445f19c74a7f33931cee87e96cca548e
33014

TACACS+ Server #1:
  Host name   : TacSrvr1
  Port        : 49
  Timeout     : 60 seconds
  Key         : e7745aa968d0f9b7dd7674d1e7722af593ac21164b45c09e22659f2790ce2da59
e91ce899d23733ce4b31d0636d3fc15fdb6405f260f0234b584dde27de744dc

TACACS+ Server #2:
  Host name   : TacSrvr2
  Port        : 49
  Timeout     : 45 seconds
  Key         : fd8a38dd7263e2bc09a330c1120a39e9216519b36ba04016db5e6263345fa60d9
eaf280813006b58c9f821a6875160a6bac033cff933f65ae151576dcbbba39

SM24TBT2DPA#
```

**Message:** No hosts configured!

## terminal

Show terminal configuration parameters.

### SYNTAX

```
show terminal [ | {begin | exclude | include } <LINE>
```

#### Parameters

	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match

### EXAMPLE

```
SM24TBT2DPA# show terminal

Line is vty 0.

* You are at this line now.

Alive from Telnet.

Default privileged level is 2.

Command line editing is disabled

Display EXEC banner is enabled.

Display Day banner is enabled.

Terminal width is 80.

    length is 24.

    history size is 32.

    exec-timeout is 10 min 0 second.

Current session privilege is 15.

Elapsed time is 0 day 0 hour 4 min 31 sec.

Idle time is 0 day 0 hour 0 min 0 sec.

SM24TBT2DPA#
```

## **upnp**

Display Universal Plug and Play parameters.

### **SYNTAX**

```
show upnp [ | {begin | exclude | include } <LINE>
```

#### **Parameters**

	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

### **EXAMPLE**

```
SM24TBT2DPA# show upnp
UPnP Mode : Disabled
UPnP TTL : 4
UPnP Advertising Duration : 100
SM24TBT2DPA# show upnp
UPnP Mode : Enabled
UPnP TTL : 5
UPnP Advertising Duration : 90
SM24TBT2DPA#
SM24TBT2DPB# show upnp
UPnP Mode : Disabled
UPnP TTL : 100
UPnP Advertising Duration : 86400
SM24TBT2DPB#
```

## ***user-privilege***

Display Users privilege configuration.

### **SYNTAX**

**show user priv**

### **Parameters**

**user-privilege** Users privilege configuration

<cr>

### **EXAMPLE**

```
SM24TBT2DPA# show user-privilege
username admin privilege 15 password encrypted YWRtaW4=
SM24TBT2DPA# show user-privilege
username admin privilege 15 password encrypted 5003cf1108a4b8ad3ad773ea99e921018

SM24TBT2DPA#
SM24TBT2DPB# show user-privilege
username admin privilege 15 password encrypted
98893c74dc11664ed475e58195a6fca713d3101b9e303d50c43ee3375da1d04bb808b3ad0cfa4aaaa74
77005fe2d2384ec2fd5b94181b365b3abdf7b65425e80
SM24TBT2DPB#
```

## users

Display information about terminal lines.

### SYNTAX

```
show users myself [ | {begin | exclude | include } <LINE>
```

#### Parameters

<b>myself</b>	Display information about mine
	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

### EXAMPLE

```
SM24TBT2DPA# show users
Line is vty 0.

* You are at this line now.

Connection is from 192.168.1.99:58644 by Telnet.

User name is admin.

Privilege is 15.

Elapsed time is 0 day 0 hour 12 min 1 sec.

Idle time is 0 day 0 hour 0 min 0 sec.
```

```
SM24TBT2DPA#
```

```
SM24TBT2DPB# show users myself
Line is vty 0.

* You are at this line now.

Connection is from 192.168.1.75:53610 by SSH.

User name is admin.

Privilege is 15.

Elapsed time is 0 day 22 hour 12 min 47 sec.

Idle time is 0 day 0 hour 0 min 0 sec.
```

```
SM24TBT2DPB#
```

## version

Show system hardware and software status.

### SYNTAX

```
show version [ | {begin | exclude | include } <LINE>
```

#### Parameters

	Output modifiers
<b>begin</b>	Begin with the line that matches
<b>exclude</b>	Exclude lines that match
<b>include</b>	Include lines that match
<b>&lt;LINE&gt;</b>	String to match output lines

### EXAMPLE

```
SM24TBT2DPB# show version

MEMORY          : Total=70473 KBytes, Free=46804 KBytes, Max=45699 KBytes

SM24TBT2DPB#
```

## vlan

Display VLAN parameters.

### SYNTAX

```
show vlan [ id <vlan_list> | name <name> | brief ]
show vlan ip-subnet [ id <subnet_id> ]
show vlan mac [ address <mac_addr> ]
show vlan membership [ id <vlan_list> | name <name> ] [ combined | admin | nas | mvr | voice-vlan | mstp |
erps | vcl | evc | gvrp | forbidden | dms ]
show vlan protocol [ eth2 { <etype> | arp | ip | ipx | at } ] [ snap { <oui> | rfc-1042 | snap-8021h } <pid> ] [ llc
<dsap> <ssap> ]
show vlan status [ interface ( <port_type> [ <plist> ] ) ] [ combined | admin | nas | mvr | voice-vlan | mstp | erps |
vcl | evc | gvrp | all | conflicts ]
```

### Parameters

brief	VLAN summary information
id	VLAN status by VLAN id
ip-subnet	Show VLAN ip-subnet entries.
mac	Show VLAN MAC entries.
membership	VLAN membership
name	VLAN status by VLAN name
protocol	Protocol-based VLAN status
status	Show the VLANs configured for each interface.
id	Show a specific ip-subnet entry.
<1-128>	The specific ip-subnet to show.
address	Show a specific MAC entry.
<mac_icast>	The specific MAC entry to show.
<vlan_list>	VLAN IDs 1-4095
<vword32>	A VLAN name
protocol	Protocol-based VLAN status
eth2	Ethernet protocol based VLAN status
<0x600-0xffff>	Ether Type(Range: 0x600 - 0xFFFF)
arp	Ether Type is ARP
ip	Ether Type is IP
ipx	Ether Type is IPX
at	Ether Type is AppleTalk
snap	SNAP-based VLAN status

<0x0-0xffffffff>	SNAP OUI (Range 0x000000 - 0xFFFFFFFF)
<b>rfc_1042</b>	SNAP OUI is rfc_1042
<b>snap_8021h</b>	SNAP OUI is 8021h
<0x0-0xffff>	PID (Range: 0x0 - 0xFFFF)
<b>llc</b>	LLC-based VLAN status
<0x0-0xff>	DSAP (Range: 0x00 - 0xFF)
<0x0-0xff>	SSAP (Range: 0x00 - 0xFF)
<b>admin</b>	Show the VLANs configured by administrator.
<b>combined</b>	Show the VLANs configured by a combination.
dms	Show the VLANs configured by Device Management System.
forbidden	Show VLANs configurations that has forbidden
gvrp	Show the VLANs configured by GVRP
id	VLAN membership by VLAN id
<b>conflicts</b>	Show VLANs configurations that has conflicts.
<b>gvrp</b>	Show the VLANs configured by GVRP.
<b>interface</b>	Show the VLANs configured for a specific interface(s).
<b>mstp</b>	Show the VLANs configured by MSTP.
<b>mvr</b>	Show the VLANs configured by MVR.
<b>nas</b>	Show the VLANs configured by NAS.
<b>voice-vlan</b>	Show the VLANs configured by Voice VLAN.
<b>interface</b>	Show the VLANs configured for a specific interface(s).
<port_type >	GigabitEthernet
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<port_type_list>	Port list in 1/1-26 for Gigabit Ethernet

**EXAMPLE 1**SM24TBT2DPA# **show vlan**

VLAN	Name	Interfaces
1	default	Gi 1/1-26

SM24TBT2DPA#

**EXAMPLE 2**

```
SM24TBT2DPA# show vlan membership
VLAN  Name                      User Type   Interfaces
-----  -----
1      default                   Admin       Gi 1/1-26
SM24TBT2DPA# show vlan membership voice-vlan
VLAN  Name                      User Type   Interfaces
-----  -----
% No data exists for the selected user
SM24TBT2DPA#
```

**EXAMPLE 3**

```
SM24TBT2DPB# show vlan mac address 00-c0-f2-7c-58-77
Entry with MAC address 00-c0-f2-7c-58-77 not found
SM24TBT2DPB# show vlan brief
VLAN  Name                      Interfaces
-----  -----

2      VLAN0002                 Gi 1/7-8
3      VLAN0003                 Gi 1/7-8
4      VLAN0004                 Gi 1/7-8
5      VLAN0005                 Gi 1/7-8
6      VLAN0006                 Gi 1/7-8
7      VLAN0007                 Gi 1/7-8
8      VLAN0008                 Gi 1/7-8
9      VLAN0009                 Gi 1/7-8
10     VLAN0010                 Gi 1/7-8
100    VLAN0100                 Gi 1/7-8
200    VLAN0200                 Gi 1/7-8

SM24TBT2DPB# show vlan protocol llc 0x01 0x11
Entry not found
SM24TBT2DPB#
```

**Messages:** % No data exists for the selected user

## voice

Show Voice VLAN attributes.

### SYNTAX

```
show voice vlan [ oui <oui> | interface ( <port_type> [ <port_list> ] ) ]
```

### Parameters

<b>vlan</b>	Vlan for voice traffic
<b>interface</b>	Select an interface to configure
<b>oui</b>	OUI configuration
<b>&lt;oui&gt;</b>	OUI value
<b>&lt;port_type&gt;</b>	* or Gigabit Ethernet
*	All Switches or All ports
<b>Gigabit Ethernet</b>	1 Gigabit Ethernet Port
<b>&lt;port_type_list&gt;</b>	Port list in 1/1-24 for Gigabit Ethernet

### EXAMPLE

```
SM24TBT2DPB# show voice vlan
Switch voice vlan is enabled
Switch voice vlan ID is 100
Switch voice vlan aging-time is 5000 seconds
Switch voice vlan traffic class is 4

Telephony OUI Description
-----
Voice VLAN switchport is configured on following:

GigabitEthernet 1/1 :
-----
GigabitEthernet 1/1 switchport voice vlan mode is forced
GigabitEthernet 1/1 switchport voice security is enabled
GigabitEthernet 1/1 switchport voice discovery protocol is both

GigabitEthernet 1/2 :
-----
GigabitEthernet 1/2 switchport voice vlan mode is forced
GigabitEthernet 1/2 switchport voice security is enabled
GigabitEthernet 1/2 switchport voice discovery protocol is both

-- more --, next page: Space, continue: g, quit: ^C
```

## web

Display web privileges.

### SYNTAX

```
show web privilege group [ <group_name> ] level
```

#### Parameters

<b>privilege</b>	Web privilege		
<b>group</b>	Web privilege group		
<b>CWORD</b>	Valid words are:		
ACTIVATE	Aggregation	DHCP	DMS_client
DMS_server	Debug	Dhcp_Client	Diagnostics
EEE	GARP	GVRP	Green_Ethernet
IP2	IPMC_Snooping	Install_Wizard	LACP
LLDP	Loop_Protect	MAC_Table	MVR
Maintenance	Mirroring	NTP	POE
Percepexion	Ports	Private_VLANs	QoS
RPC	R_RING	SMTP	Security
Spanning_Tree	System	TS_client	TS_server
Timer	Trap_Event	Trouble_Shooting	UPnP
VCL	VLANs	VTUN	Voice_VLAN
XXRP	cloud_management	level	sFlow
<b>level</b>	Web privilege group level		

### EXAMPLE 1

```
SM24TBT2DPA# show web privilege group cloud_management level
Group Name          Privilege Level
                         CRO CRW SRO SRW
-----
cloud_management      5  10   5  10

SM24TBT2DPA# show web privilege group Install_Wizard level
Group Name          Privilege Level
                         CRO CRW SRO SRW
-----
Install_Wizard        5  10   5  10
```

**EXAMPLE 2**

```
SM24TBT2DPA# show web privilege group level

Group Name          Privilege Level
                         CRO CRW SRO SRW
-----
ACTIVATE           5 10 5 10
Aggregation       5 10 5 10
BSC_Protection    5 10 5 10
cloud_management  5 10 5 10
Debug              15 15 15 15
DHCP               5 10 5 10
Dhcp_Client        5 10 5 10
Diagnostics       5 10 5 10
DMS_client         5 10 5 10
DMS_server         5 10 5 10
EEE                5 10 5 10
GARP               5 10 5 10
Green_Ethernet     5 10 5 10
GVRP               5 10 5 10
Install_Wizard     5 10 5 10
IP2                5 10 5 10
IPMC_Snooping      5 10 5 10
LACP               5 10 5 10
LLDP               5 10 5 10
-- more --, next page: Space, continue: g, quit: ^C
```

## 18. Terminal Commands

Set terminal line parameters.

### Syntax

```
terminal editing
terminal exec-timeout <min> [ <sec> ]
terminal help
terminal history size <history_size>
terminal length <lines>
terminal width <width>
```

### Parameters

<b>editing</b>	Enable command line editing
<b>exec-timeout</b>	Set the EXEC timeout
<b>help</b>	Description of the interactive help system
<b>history</b>	Control the command history function
<b>length</b>	Set number of lines on a screen
<b>width</b>	Set width of the display terminal
<b>&lt;0-1440&gt;</b>	Timeout in minutes
<b>&lt;0-3600&gt;</b>	Timeout in seconds
<b>size</b>	Set history buffer size
<b>&lt;0-32&gt;</b>	Number of history commands, 0 means disable
<b>&lt;0 or 3-512&gt;</b>	Number of lines on screen (0 for no pausing)
<b>&lt;0 or 40-512&gt;</b>	Number of characters on a screen line (0 for unlimited width)

### EXAMPLE

```
SM24TBT2DPA# terminal editing
SM24TBT2DPA# terminal exec-timeout 1440
SM24TBT2DPA#
```

## 19. IP Commands

IPv4 command.

### Syntax

```
ip dhcp retry interface vlan <vlan_id>
```

### Parameters

<b>dhcp</b>	Dhcp command
<b>retry</b>	Restart the DHCP query process
<b>interface</b>	Interface
<b>vlan</b>	Vlan interface
<b>&lt;vlan_id&gt;</b>	Vlan ID

### EXAMPLE

```
SM24TBT2DPA# ip dhcp retry interface vlan 1
% Failed to restart DHCP client on VLAN = 1.
SM24TBT2DPA#
```

## 20. Interface Config Mode Commands

### Interfaces:

*	All switches or All ports
GigabitEthernet	1 Gigabit Ethernet Port
vlan	VLAN interface configurations
<port_type_list>	Port list for all port types
<port_type_list>	Port list in 1/1-26
<vlan_list>	List of VLAN interface numbers, 1~4095

### Interface config mode commands:

access-list	Access list
aggregation	Create an aggregation
description	Up to 47 characters describing this interface
do	To run exec commands in config mode
dot1x	IEEE Standard for port-based Network Access Control
duplex	Interface duplex
end	Go back to EXEC mode
excessive-restart	Restart backoff algorithm after 16 collisions
exit	Exit from current mode
flowcontrol	Traffic flow control.
green-ethernet	Green ethernet (Power reduction)
gvrp	Enable GVRP on interface or interfaces
help	Description of the interactive help system
ip	Internet Protocol
ipv6	IPv6 configuration commands
lacp	Enable LACP on this interface
lldp	LLDP configurations.
loop-protect	Loop protection configuration on port
mac	MAC keyword
mtu	Maximum transmission unit
mvr	Multicast VLAN Registration configuration
no	Negate a command or set its defaults
poe	Power Over Ethernet.
port-security	Enable/disable port security per interface.
pvlan	Private VLAN

qos	Quality of Service
rmon	Configure Remote Monitoring on an interface
sflow	Statistics flow.
shutdown	Shutdown of the interface.
spanning-tree	Spanning Tree protocol
speed	Configures interface speed.
switchport	Configure Switching mode characteristics.

### **access-list**

Configure Access list parameters.

#### **Syntax**

```
access-list action { permit | deny }
access-list logging
access-list mirror
access-list policy <policy_id>
access-list port-state
access-list rate-limiter <rate_limiter_id>
access-list shutdown
access-list { redirect | port-copy } interface { <port_type> <port_type_id> | (<port_type> [ <port_type_list> ] ) }
```

#### **Parameters**

action	Access list action
logging	Logging frame information.
mirror	Mirror frame to destination mirror port
policy	Policy
port-state	Re-enable shutdown port that was shutdown by access-list module
rate-limiter	Rate limiter
redirect	Redirect frame to specific port
shutdown	Shutdown incoming port.
deny	Deny action
permit	Permit action
<PolicyId : 0-255>	Policy ID
<RateLimiterId : 1-16>	Rate limiter ID
interface	Select an interface to configure
*	All switches or All ports
GigabitEthernet	1 Gigabit Ethernet Port
PORT_LIST	Port list for all port types

**EXAMPLE**

```
SM24TBT2DPA(config-if)# access-list action permit
SM24TBT2DPA(config-if)# access-list action deny
SM24TBT2DPA(config-if)#
Username: admin
Password:
SM24TBT2DPA(config-if)# access-list logging
SM24TBT2DPA(config-if)# access-list mirror
SM24TBT2DPA(config-if)# access-list policy 0
SM24TBT2DPA(config-if)# access-list port-state
SM24TBT2DPA(config-if)# access-list rate-limiter 1
SM24TBT2DPA(config-if)#

```

**aggregation**

Create an aggregation.

**Syntax**

```
aggregation group <v_uint>
```

**Parameters**

group	Create an aggregation group
<uint>	The aggregation group id

**EXAMPLE**

```
SM24TBT2DPA(config-if)# aggregation group 1
SM24TBT2DPA(config-if)#

```

**Messages:** The aggregation cannot include more than 16 ports

**description**

Enter up to 47 characters describing this interface.

**Syntax**

```
description <port_descr>
```

**Parameters**

```
<line47>
```

**EXAMPLE**

```
SM24TBT2DPA(config-if)# description myline
SM24TBT2DPA(config-if)#

```

**do**

To run exec commands in Config mode.

**Syntax**

**do <command>**

**Parameters**

LINE            Exec Command

<cr>

**EXAMPLE**

```
SM24TBT2DPA# do show vlan
VLAN  Name                      Interfaces
----- 
1     default                    Gi 1/1-26

SM24TBT2DPA# do show ip interface brief
Vlan Address          Method  Status
----- 
1  192.168.1.77/24    Manual   UP
SM24TBT2DPA#
```

**dot1x**

Configure IEEE Standard for port-based Network Access Control.

**Syntax**

```
dot1x guest-vlan  
dot1x port-control { force-authorized | force-unauthorized | auto | single | multi | mac-based }  
dot1x radius-qos  
dot1x radius-vlan  
dot1x re-authenticate
```

**Parameters**

guest-vlan	Enables/disables guest VLAN
port-control	Sets the port security state.
radius-qos	Enables/disables per-port state of RADIUS-assigned QoS.
radius-vlan	Enables/disables per-port state of RADIUS-assigned VLAN.
re-authenticate	Refresh (restart) 802.1X authentication process.
auto	Port-based 802.1X Authentication
force-authorized	Port access is allowed
force-unauthorized	Port access is not allowed
mac-based	Switch authenticates on behalf of the client
multi	Multiple Host 802.1X Authentication
single	Single Host 802.1X Authentication
<cr>	

**EXAMPLE**

```
SM24TBT2DPA(config-if)# dot1x guest-vlan  
SM24TBT2DPA(config-if)# dot1x radius-qos  
SM24TBT2DPA(config-if)# dot1x radius-vlan  
SM24TBT2DPA(config-if)# dot1x re-authenticate  
SM24TBT2DPA(config-if)#{
```

## **duplex**

Configure duplex mode for an interface.

### **Syntax**

```
duplex { half | full | auto [ half | full ] }
```

### **Parameters**

<b>duplex auto</b>	Auto negotiation of duplex mode.
<b>duplex full</b>	Forced full duplex.
<b>duplex half</b>	Forced half duplex.

### **EXAMPLE**

```
SM24TBT2DPA(config-if)# duplex auto
SM24TBT2DPA(config-if)# duplex auto full
SM24TBT2DPA(config-if)# duplex half
GigabitEthernet 1/3 with current speed does not support half duplex, duplex chan-
ged to full duplex
SM24TBT2DPA(config-if)#

```

## **end**

Go back to EXEC mode.

### **Syntax**

```
end
```

### **Parameters**

```
<cr>
```

### **EXAMPLE**

```
SM24TBT2DPA(config-if)# end
SM24TBT2DPA#
```

## ***excessive restarts***

### **Syntax**

**excessive-restart**

### **Parameters**

**excessive-restart**      Restart backoff algorithm after 16 collisions. (No excessive-restart means discard frame after 16 collisions).

<cr>

### **EXAMPLE**

```
SM24TBT2DPA(config-if)# excessive-restart  
SM24TBT2DPA(config-if)#{
```

## ***exit***

Exit from current mode.

### **Syntax**

**end**

### **Parameters**

<cr>

### **EXAMPLE**

```
SM24TBT2DPA# exit
```

Username:

Password:

## flow control

Configure flow control for an interface.

### Syntax

```
flowcontrol { on | off }
```

### Parameters

**off** Disable flow control.

**on** Enable flow control.

### EXAMPLE

```
SM24TBT2DPA(config-if)# flowcontrol off  
SM24TBT2DPA(config-if)# flowcontrol on  
SM24TBT2DPA(config-if)#{
```

## green-ethernet

Configure Green ethernet (Power reduction) for an interface.

### Syntax

```
green-ethernet eee  
green-ethernet eee urgent-queues [ <urgent_queue_range_list> ]  
green-ethernet energy-detect  
green-ethernet short-reach
```

### Parameters

<b>eee</b>	Powering down of PHYs when there is no traffic.
<b>energy-detect</b>	Enable power saving for ports with no link partner.
<b>short-reach</b>	Enable power saving for ports which is connect to link partner with short cable.
<b>urgent-queues</b>	Enables EEE urgent queue. An urgent queue means that latency is kept to a minimum for traffic going to that queue. Note: EEE power savings will be reduced.
<b>&lt;range_list&gt;</b>	EEE Interface. Valid range is 1-8.

### EXAMPLE

```
SM24TBT2DPA(config-if)# green-ethernet eee  
GigabitEthernet 1/25 is not EEE capable. Skipping  
GigabitEthernet 1/26 is not EEE capable. Skipping  
SM24TBT2DPA(config-if)# green-ethernet energy-detect  
SM24TBT2DPA(config-if)# green-ethernet short-reach  
SM24TBT2DPA(config-if)# green-ethernet eee urgent-queues 1-4  
SM24TBT2DPA(config-if)#{
```

## gvrp

Enable GVRP on interface or interfaces.

### Syntax

```
gvrp  
  gvrp join-request vlan <v_vlan_list>
```

### Parameters

join-request    Emit a Join-Request for test purpose

vlan

<vlan\_list>    List of VLANs

### EXAMPLE

```
SM24TBT2DPA(config-if)# gvrp join-request vlan 10  
E xxrp 00:56:04 133/funktor_portvlan#247: Error: rc=-1  
SM24TBT2DPA(config-if)#

```

## help

Description of the interactive help system.

### Syntax

See below.

### Parameters

None.

### EXAMPLE

```
SM24TBT2DPA(config-if)# help  
Help may be requested at any point in a command by entering a question mark '?'.  
If nothing matches, the help list will be empty and you must backup until entering  
a '?' shows the available options. Two styles of help are provided:  
1. Full help is available when you are ready to enter a command argument (e.g.  
'show ?') and describes each possible argument.  
2. Partial help is provided when an abbreviated argument is entered and you want to  
know what arguments match the input (e.g. 'show pr?').  
  
SM24TBT2DPA(config-if)#

```

**ip**

Configure Internet Protocol for an interface.

**Syntax**

```
ip arp inspection check-vlan  
ip arp inspection logging { deny | permit | all }  
ip arp inspection trust  
ip dhcp snooping trust  
ip igmp snooping filter <profile_name>  
ip igmp snooping immediate-leave  
ip igmp snooping max-groups <throttling>  
ip igmp snooping mrouter  
ip verify source  
ip verify source limit <cnt_var>
```

**Parameters**

arp	Address Resolution Protocol
dhcp	Dynamic Host Configuration Protocol
igmp	Internet Group Management Protocol
verify	verify command
inspection	ARP inspection
check-vlan	ARP inspection VLAN mode config
logging	ARP inspection logging mode config
trust	ARP inspection trust config
all	log all entries
deny	log denied entries
permit	log permitted entries
filter	Access control on IGMP multicast group registration
immediate-leave	Immediate leave configuration
max-groups	IGMP group throttling configuration
mrouter	Multicast router port configuration
<ProfileName : word16>	Profile name in 16 char's
<Throttling : 1-10>	Maximum number of IGMP group registration
source	verify source
limit	limit command
<0-2>	the number of limit

**EXAMPLE**

```
SM24TBT2DPA(config-if)# ip arp inspection check-vlan
SM24TBT2DPA(config-if)# ip arp inspection logging all
SM24TBT2DPA(config-if)# ip arp inspection trust
SM24TBT2DPA(config-if)#
SM24TBT2DPB(config-if)# ip igmp snooping filter IgmpProf1
% Please specify correct filter profile name.
SM24TBT2DPB(config-if)# ip igmp snooping immediate-leave
SM24TBT2DPB(config-if)# ip igmp snooping max-groups 1
SM24TBT2DPB(config-if)# ip igmp snooping mrouter
SM24TBT2DPB(config-if)# ip verify source limit 0
SM24TBT2DPB(config-if)#[/pre]
```

## ipv6

Configure IPv6 for an interface.

### Syntax

**ipv6** mld snooping filter <profile\_name>

**ipv6** mld snooping immediate-leave

**ipv6** mld snooping max-groups <throttling>

**ipv6** mld snooping mrouter

### Parameters

mld Multicast Listener Discovery

snooping Snooping MLD

filter Access control on MLD multicast group registration

immediate-leave Immediate leave configuration

max-groups MLD group throttling configuration

mrouter Multicast router port configuration

<ProfileName : word16> Profile name in 16 characters

<Throttling : 1-10> Maximum number of MLD group registration

<cr>

### EXAMPLE

```
SM24TBT2DPA(config-if)# ipv6 mld snooping
SM24TBT2DPA(config-if)# ipv6 mld snooping max 1
SM24TBT2DPA(config-if)# ipv6 mld snooping mrouter
SM24TBT2DPA(config-if)#
SM24TBT2DPB(config-if)# ipv6 mld snooping filter 1111
% Please specify correct filter profile name.
% Failed to set filtering profile 1111.
SM24TBT2DPB(config-if)# ipv6 mld snooping immediate-leave
SM24TBT2DPB(config-if)# ipv6 mld snooping max-groups 4
SM24TBT2DPB(config-if)#

```

## lacp

Configure Enable LACP on this interface.

### Syntax

```
lacp
  lacp key { <v_1_to_65535> | auto }
  lacp port-priority <v_1_to_65535>
  lacp role { active | passive }
  lacp timeout { fast | slow }
```

### Parameters

key	Key of the LACP aggregation
port-priority	LACP priority of the port
role	Active / Passive (speak if spoken to) role
timeout	The period between BPDU transmissions
<1-65535>	Key value
auto	Choose a key based on port speed
<1-65535>	Priority value, lower means higher priority
active	Transmit LACP BPDUs continuously
passive	Wait for neighbour LACP BPDUs before transmitting
fast	Transmit BPDU each second (fast timeout)
slow	Transmit BPDU each 30th second (slow timeout)
<cr>	

### EXAMPLE

```
SM24TBT2DPA(config-if)# lacp key 1
SM24TBT2DPA(config-if)# lacp key auto
SM24TBT2DPA(config-if)# lacp
SM24TBT2DPA(config-if)# lacp port-priority 500
SM24TBT2DPA(config-if)# lacp role active
SM24TBT2DPA(config-if)# lacp role passive
SM24TBT2DPA(config-if)# lacp timeout fast
SM24TBT2DPA(config-if)# lacp timeout slow
SM24TBT2DPA(config-if)#

```

## **lldp**

Configure LLDP parameters for an interface.

### **Syntax**

**lldp** cdp-aware

**lldp** med media-vlan policy-list <v\_range\_list>

**lldp** med transmit-tlv [ capabilities ] [ location ] [ network-policy ]

**lldp** receive

**lldp** tlv-select { management-address | port-description | system-capabilities | system-description | system-name }

**lldp** transmit

### **Parameters**

cdp-aware Sets the interface to CDP aware (CDP discovery info added to LLDP neighbor table)

med Media Endpoint Discovery.

receive Enable/Disable decoding of received LLDP frames.

tlv-select Which optional TLVs to transmit.

transmit Enable/Disabled transmision of LLDP frames.

media-vlan Media VLAN assigment.

transmit-tlv LLDP-MED Location Type Length Value parameter.

policy-list Assignment of policies.

policies list e.g. 1,2, Policies to assign to the interface.

management-address Enable/Disable transmission of management address.

port-description Enable/Disable transmission of port description.

system-description Enable/Disable transmission of system description.

system-name Enable/Disable transmission of system name.

capabilities Enable transmission of the optional capabilities TLV.

location Enable transmission of the optional location TLV.

network-policy Enable transmission of the optional network-policy TLV.

### **EXAMPLE**

```
SM24TBT2DPA(config-if)# lldp cdp-aware
SM24TBT2DPA(config-if)# lldp med media-vlan policy-list 1
Ignoring policy 1 for port 15 because no such policy is defined
SM24TBT2DPA(config-if)# lldp receive
SM24TBT2DPA(config-if)# lldp tlv-select
SM24TBT2DPA(config-if)# lldp tlv-select management-address
SM24TBT2DPA(config-if)# lldp tlv-select port-description
SM24TBT2DPA(config-if)#

```

## **loop-protect**

Configure Loop protection parameters on port.

### **Syntax**

**loop-protect**

**loop-protect** action { [ shutdown ] [ log ] }\*1

**loop-protect** tx-mode

### **Parameters**

action Action if loop detected

tx-mode Actively generate PDUs

log Generate log

shutdown Shutdown port

<cr>

### **EXAMPLE**

```
SM24TBT2DPA(config-if)# loop-protect action log shutdown
```

```
SM24TBT2DPA(config-if)# loop-protect tx-mode
```

```
SM24TBT2DPA(config-if)#

```

## **mac**

Configure MAC keyword for an interface.

### **Syntax**

**mac** address-table learning [ secure ]

### **Parameters**

address-table MAC table configuration

learning Port learning mode

secure Port Secure mode

<cr>

### **EXAMPLE**

```
SM24TBT2DPA(config-if)# mac address-table learning secure
```

```
SM24TBT2DPA(config-if)# mac address-table learning
```

```
SM24TBT2DPA(config-if)#

```

## mtu

Configure Maximum transmission unit for an interface.

### Syntax

```
mtu <max_length>
```

### Parameters

1518-9600     Maximum frame size in bytes.

### EXAMPLE

```
SM24TBT2DPA(config-if)# mtu 2000  
SM24TBT2DPA(config-if)# mtu 1518  
SM24TBT2DPA(config-if)# mtu 9600  
SM24TBT2DPA(config-if)#{
```

## mvr

Multicast VLAN Registration configuration for an interface.

### Syntax

```
mvr immediate-leave  
mvr name <mvr_name> type { source | receiver }  
mvr vlan <v_vlan_list> type { source | receiver }
```

### Parameters

immediate-leave	Immediate leave configuration
name	MVR multicast name
vlan	MVR multicast vlan
<MvrName : word16>	MVR multicast VLAN name
type	MVR port role configuration
receiver	MVR receiver port
source	MVR source port
<vlan_list>	MVR multicast VLAN list

### EXAMPLE

```
SM24TBT2DPA(config-if)# mvr name MvrVid1 type receiver  
SM24TBT2DPA(config-if)# mvr name MvrVid1 type source  
% Invalid MVR VLAN MvrVid1.    % Failed to set MVR port role.  
SM24TBT2DPA(config-if)# mvr immediate-leave  
SM24TBT2DPA(config-if)#{
```

***no***

Negate a command or set its defaults for an interface.

**Parameters**

access-list	aggregation	description	dot1x
duplex	excessive-restart	flowcontrol	green-ethernet
gvrp	ip	ipv6	lacp
lldp	loop-protect	mac	mtu
mvr	poe	port-security	pvlan
qos	rmon	sflow	shutdown
spanning-tree	speed	switchport	

**EXAMPLE**

```
SM24TBT2DPA(config-if)# no description
SM24TBT2DPA(config-if)# no sflow
SM24TBT2DPA(config-if)#{
```

**poe**

Configure PoE parameters on one or more interfaces ([before FW vB6.54.3494](#)).

**Syntax**

```
poe capacitor-detection
poe delay-mode
poe delay-time <v_0_to_300>
poe failure-action { nothing | reboot-Remote-PD }
poe interval-time <interval>
poe max-reboot-times <reboot>
poe mode { enable | disable | force | 2-pair | 4-pair }
poe ping-ip-addr <address>
poe ping-retry-time <retry>
poe port-profile name <entry_name>
poe power limit { <v_word9> }
poe priority { low | high | critical }
poe reboot-time <reboot>
poe startup-time <startuptime>
```

**Parameters**

capacitor-detection	Configure PoE port capacitor detection.
delay-mode	Configure PoE Power delay mode
delay-time	Setting power delay time from 0 to 300(sec).
failure-action	Configure PoE Auto Power Reset Failure Action.
interval-time	Configure PoE Auto Power Reset Interval Time.
max-reboot-times	Configure PoE Auto Power Reset Max Reboot Times.
<0-10>	Max. Reboot Times : 0 ~ 10
mode	PoE mode.
2-pair	Set mode to PoE 2-pair (Maximum power 30.0 W)
4-pair	Set mode to PoE 4-pair (Maximum power 60.0 W)
disable	Set mode to PoE Disable
enable	Set mode to PoE Enable (Maximum power 90.0 W)
ping-ip-addr	Configure PoE Ping IP Address.
ping-retry-time	Configure PoE Auto Power Reset Retry Time.
port-profile	poe scheduling profile
power	Setting maximum power for port in allocation mode.
priority	Interface priority.

reboot-time	Configure PoE Auto Power Reset Reboot Time.
startup-time	Configure PoE Auto Power Reset Start up Time.
<0-300>	poe delay-time
nothing	Failure Action : Do Nothing.
reboot-Remote-PD	Failure Action : Reboot Remote PD.
<ipv4_addr>	Set PoE Ping IP Address.
name	poe scheduling profile name
<profile name : line32>	profile name, the name length is 32
<profile name : line32>	Profile name, the name length is 32
limit	The maximum power.
<Power in watts : option>	Maximum power for the interface (Class 4 PDs limited to 90W).
critical	Set priority to critical.
high	Set priority to high.
low	Set priority to low.
nothing	Failure Action : Nothing.
reboot-Remote-PD	Failure Action : Reboot Remote PD.
<Power in watts : option>	Maximum power for the interface (Class 4 PDs limited to 90W).

#### EXAMPLE

```
SM24TBT2DPA(config-if)# poe capacitor-detection
SM24TBT2DPA(config-if)# poe delay-mode
SM24TBT2DPA(config-if)# poe delay-time 200
SM24TBT2DPA(config-if)# poe ping-ip-addr 192.168.1.30
SM24TBT2DPA(config-if)# poe mode enable
SM24TBT2DPA(config-if)# poe port-profile name sabado
SM24TBT2DPA(config-if)# poe power limit 80
SM24TBT2DPA(config-if)# poe priority critical
SM24TBT2DPA(config-if)#

```

#### Message:

*Maximum allowed power (for the current mode) for GigabitEthernet 1/5 is limited to 90.0 W  
W poe 01:49:55 132/poe\_icli\_mode\_conf#671: Warning: The Max Power is restricted to 60W.  
W poe 01:50:42 132/poe\_icli\_mode\_conf#648: Warning: The Max Power is restricted to 30W.  
% profile name does not exist.*

## poe

Configure Power Over Ethernet on an interface ([FW vB6.54.3494 and above](#)).

### Syntax

```
poe delay-mode
poe delay-time <v_0_to_300>
poe failure-action { nothing | reboot-Remote-PD }
poe interval-time <interval>
poe legacy
poe llldp
poe max-reboot-times <reboot>
poe mode disable
poe mode { 4pair60w | 4pair90w }
poe mode { 8023bt90w | 8023bt60w | 8023bt30w | force90w | force60w }
poe ping-ip-addr <address>
poe ping-retry-time <retry>
poe port-profile name <entry_name>
poe priority { low | high | critical }
poe reboot-time <reboot>
poe startup-time <startuptime>
```

### Parameters

delay-mode	Configure PoE Power delay mode
delay-time	Setting power delay time from 0 to 300(sec).
failure-action	Configure PoE Auto Power Reset Failure Action.
interval-time	Configure PoE Auto Power Reset Interval Time.
legacy	Enable poe legacy functionality
lldp	Enable poe lldp functionality
max-reboot-times	Configure PoE Auto Power Reset Max Reboot Times.
mode	PoE mode.
ping-ip-addr	Configure PoE Ping IP Address.
ping-retry-time	Configure PoE Auto Power Reset Retry Time.
port-profile	poe scheduling profile
priority	Interface priority.
reboot-time	Configure PoE Auto Power Reset Reboot Time.
startup-time	Configure PoE Auto Power Reset Start up Time.
<0-300>	poe delay-time (sec.)

nothing	Failure Action : Nothing.
reboot-Remote-PD	Failure Action : Reboot Remote PD.
<10-120>	Interval Time : 10 ~ 120(sec).
<0-10>	Max. Reboot Times : 0 ~ 10
4pair60w	Set mode to 4-pair 60w
4pair90w	Set mode to 4-pair 90w
8023bt	Set mode to 802.3bt
disable	Set mode to Disable
<ipv4_addr>	Set PoE Ping IP Address.
<1-5>	Retry Time : 1 ~ 5.
name	poe scheduling profile name
<profile name : line32>	profile name, the name length is 32
limit	The maximum power.
<Power in watts : option>	Maximum power for the interface (Class 4 PDs limited to 90W).
critical	Set priority to critical.
high	Set priority to high.
low	Set priority to low.
<3-120>	Reboot Time : 3 ~ 120(sec).
<30-600>	Start up Time : 30 ~ 600(sec).

#### EXAMPLE

```
SM24TBT2DPA(config-if)# poe delay-mode
SM24TBT2DPA(config-if)# poe delay-time 200
SM24TBT2DPA(config-if)# poe failure-action reboot-Remote-PD
SM24TBT2DPA(config-if)# poe interval-time 45
SM24TBT2DPA(config-if)# poe legacy
SM24TBT2DPA(config-if)# poe lldp
SM24TBT2DPA(config-if)# poe max-reboot-times 4
SM24TBT2DPA(config-if)# poe ping-ip-addr 192.168.1.77
SM24TBT2DPA(config-if)# poe ping-retry-time 2
SM24TBT2DPA(config-if)# poe priority critical
SM24TBT2DPA(config-if)# poe reboot-time 15
SM24TBT2DPA(config-if)# poe startup-time 150
SM24TBT2DPA(config-if)# poe mode 8023bt
SM24TBT2DPA(config-if)#

```

## Firmware Upgrade to FW vB6.54.3494

Once you upgrade the SM24TBT2DPA to FW vB6.54.3494, you can't fall back to the old FW version. This is because the FW upgrade includes a PoE FW upgrade to support the IEEE 802.3bt standard, so you can't downgrade to an old FW version.

**PoE Mode setting between v6.54.3303 with v6.54.3476 (and newer)**

v6.54.3303	vB6.54.3476
Disabled	Disabled
Enabled (*)	4pair90w
4pair	4pair60w
2pair	8023bt (*)

**Notes:**

1. The PoE mode setting will be mapped according to the table above after firmware upgrade.
2. It's not allowed to downgrade to v6.54.3303 or older version after firmware upgrade to vB6.54.3476 or newer version
3. It's not allowed to swap firmware image when the back image is v6.54.3303 or older version.

## poe mode

Set Power Over Ethernet Mode on an interface (at FW VB6.64.0031).

### Syntax

**poe mode disable**

**poe mode { 4pair60w | 4pair90w }**

**poe mode { 8023bt90w | 8023bt60w | 8023bt30w | force90w | force60w }**

### Parameters

**4pair60w** Set mode to 4-pair 60w

**4pair90w** Set mode to 4-pair 90w

**8023bt30w** Set mode to 802.3bt 30w

**8023bt60w** Set mode to 802.3bt 60w

**8023bt90w** Set mode to 802.3bt 90w

**disable** Set mode to Disable

**force60w** Set mode to force 60w. **Caution:** using PoE ‘Force’ mode to force the switch to send PoE to non-PoE devices can physically damage those devices.

**force90w** Set mode to force 90w. **Caution:** using PoE ‘Force’ mode to force the switch to send PoE to non-PoE devices can physically damage those devices.

### EXAMPLE

```
SM24TBT2DPA(config-if)# poe mode force90w
GigabitEthernet 1/25 does not have PoE support
GigabitEthernet 1/26 does not have PoE support
SM24TBT2DPA(config-if)# do show poe config
Primary Power Supply [W]      : 820
Port  Mode      Schedule          Priority  LLDP    Legacy
-----  -----
1     8023bt60w  Disable           Low      Enabled  Disabled
2     force90w   Disable           Critical Enabled  Disabled
3     8023bt60w  Disable           Low      Enabled  Disabled
-- more --, next page: Space, continue: g, quit: ^C
23    8023bt30w  Disable           Low      Enabled  Enabled
24    8023bt30w  Disable           Low      Enabled  Enabled
GigabitEthernet 1/25 does not have PoE support
GigabitEthernet 1/26 does not have PoE support
SM24TBT2DPA(config-if)#

```

## port security

Configure port security for an interface.

### Syntax

```
port-security <cr>
port-security maximum { <v_1_to_1024> }
port-security sticky
port-security sticky <v_mac_addr> vlan <v_vlan_id>
port-security violation { protect | trap | trap-shutdown | shutdown }
```

### Parameters

maximum	Maximum number of MAC addresses that can be learned on this set of interfaces.
sticky	Enable/disable port security sticky function per interface.
violation	The action involved with exceeding the limit.
<Number of addresses : 1-1024>	Number of addresses
<mac_addr>	48 bit MAC address: xx:xx:xx:xx:xx:xx
vlan	VLAN keyword
<vlan_id>	VLAN IDs 1-4095
protect	Don't do anything
shutdown	Shutdown the port
trap	Send an SNMP trap
trap-shutdown	Send an SNMP trap and shutdown the port

### EXAMPLE

```
SM24TBT2DPA(config-if)# port-security maximum 500
SM24TBT2DPA(config-if)# port-security sticky 00:11:22:33:44:55 vlan 10
SM24TBT2DPA(config-if)# port-security violation protect
SM24TBT2DPA(config-if)# port-security violation trap
SM24TBT2DPA(config-if)#

```

## **pvlan**

Configure Private VLAN parameters.

### **Syntax**

**pvlan <pvlan\_list>**

**pvlan isolation**

### **Parameters**

**<range\_list>** List of PVLANS. Range is from 1 to 26.

**isolation** Port isolation

### **EXAMPLE**

```
SM24TBT2DPA(config-if)# pvlan isolation
SM24TBT2DPA(config-if)# pvlan 1
SM24TBT2DPA(config-if)# do show pvlan
PVLAN ID Ports
-----
1      GigabitEthernet 1/1, GigabitEthernet 1/2, GigabitEthernet 1/3,
      GigabitEthernet 1/4, GigabitEthernet 1/5, GigabitEthernet 1/6,
      GigabitEthernet 1/7, GigabitEthernet 1/8, GigabitEthernet 1/9,
      GigabitEthernet 1/10, GigabitEthernet 1/11, GigabitEthernet 1/12,
      GigabitEthernet 1/13, GigabitEthernet 1/14, GigabitEthernet 1/15,
      GigabitEthernet 1/16, GigabitEthernet 1/17, GigabitEthernet 1/18,
      GigabitEthernet 1/19, GigabitEthernet 1/20, GigabitEthernet 1/21,
      GigabitEthernet 1/22, GigabitEthernet 1/23, GigabitEthernet 1/24,
      GigabitEthernet 1/25, GigabitEthernet 1/26
SM24TBT2DPA(config-if)# pvlan 9
SM24TBT2DPA(config-if)# do show pvlan
PVLAN ID Ports
-----
1      GigabitEthernet 1/1, GigabitEthernet 1/2, GigabitEthernet 1/3,
      GigabitEthernet 1/4, GigabitEthernet 1/5, GigabitEthernet 1/6,
      GigabitEthernet 1/7, GigabitEthernet 1/8, GigabitEthernet 1/9,
      GigabitEthernet 1/10, GigabitEthernet 1/11, GigabitEthernet 1/12,
      GigabitEthernet 1/13, GigabitEthernet 1/14, GigabitEthernet 1/15,
      GigabitEthernet 1/16, GigabitEthernet 1/17, GigabitEthernet 1/18,
      GigabitEthernet 1/19, GigabitEthernet 1/20, GigabitEthernet 1/21,
```

```
GigabitEthernet 1/22, GigabitEthernet 1/23, GigabitEthernet 1/24,  
GigabitEthernet 1/25, GigabitEthernet 1/26  
9      GigabitEthernet 1/3  
SM24TBT2DPA(config-if)# do show pvlan 9  
PVLAN ID  Ports  
-----  
9      GigabitEthernet 1/3  
SM24TBT2DPA(config-if)#
```

**Messages:**

*% Invalid PVLAN detected*

***qos***

Configure Quality of Service for an interface.

**Syntax**

**qos cos <cos>**

**qos dei <dei>**

**qos dpl <dpl>**

**qos dscp-classify { zero | selected | any }**

**qos dscp-remark { rewrite | remap | remap-dp }**

**qos dscp-translate**

**qos map cos-tag cos <cos> dpl <dpl> pcp <pcp> dei <dei>**

**qos map tag-cos pcp <pcp> dei <dei> cos <cos> dpl <dpl>**

**qos pcp <pcp>**

**qos policer <rate> [ kbps | mbps | fps | kfps ] [ flowcontrol ]**

**qos qce { [ addr { source | destination } ] [ key { double-tag | normal | ip-addr | mac-ip-addr } ] }\*1**

**qos queue-shaper queue <queue> <rate> [ excess ]**

**qos shaper <rate> [ kbps | mbps ]**

**qos tag-remark { pcp <pcp> dei <dei> | mapped }**

**qos trust dscp**

**qos trust tag**

**qos wrr <w0> <w1> <w2> <w3> <w4> <w5>**

**Parameters**

<b>cos</b>	Class of service configuration
<b>dei</b>	Drop Eligible Indicator configuration
<b>dpl</b>	Drop precedence level configuration
<b>dscp-classify</b>	DSCP ingress classification
<b>dscp-remark</b>	DSCP egress remarking
<b>dscp-translate</b>	DSCP ingress translation
<b>map</b>	QoS Map/Table configuration
<b>pcp</b>	Priority Code Point configuration
<b>policer</b>	Policer configuration
<b>qce</b>	QoS Control Entry
<b>queue-shaper</b>	Queue shaper configuration
<b>shaper</b>	Shaper configuration
<b>tag-remark</b>	Tag remarking configuration
<b>trust</b>	Trust configuration
<b>wrr</b>	Weighted round robin configuration

<Cos : 0-7>	Specific class of service
<Dei : 0-1>	Specific Drop Eligible Indicator
<Dpl : dpl>	Specific drop precedence level
any	Classify to new DSCP always
selected	Classify to new DSCP if classify is enabled for specific DSCP value in global dscp-classify map
zero	Classify to new DSCP if DSCP is 0
remap	Rewrite DSCP field using classified DSCP and DPL=0 remapped through global dscp-egress-translation map
remap-dp	Rewrite DSCP field using classified DSCP and DPL remapped through global dscp-egress-translation map
rewrite	Rewrite DSCP field with classified DSCP value (no translation)
cos-tag	Map for cos to tag configuration
tag-cos	Map for tag to cos configuration
cos	Specify class of service
<Cos : 0~7>	Specific class of service or range
dpl	Specify drop precedence level
<Dpl : 0~1>	Specific drop precedence level or range
pcp	Specify PCP (Priority Code Point)
<Pcp : 0-7>	Specific PCP
dei	Specify DEI (Drop Eligible Indicator)
<Dei : 0-1>	Specific DEI
<Rate : uint>	Policer rate <100-3276700>(kbps) or <1-3276>(mbps) or <100-3276700>(fps) or <1-3276>(kfps).
flowcontrol	Rate is fps
fps	Unit is frames per second
kbps	Unit is kilobits per second (default)
kfps	Unit is kiloframes per second
mbps	Unit is Megabits per second
destination	Match DMAC and DIP
source	Match SMAC and SIP (default)
queue	Specify queue
<Queue : 0~7>	Specific queue or range
<Rate : 100-3276700>	Shaper rate in kbps
excess	Allow use of excess bandwidth
mapped	Used mapped values (cos,dpl -> pcp,dei)

pcp	Specify default PCP
<Pcp : 0-7>	Specific PCP
dei	Specify default DEI
<Dei : 0-1>	Specific DEI
dscp	DSCP value
tag	VLAN tag
0-100	queue <w0> <w1> <w2> <w3> <w4> <w5> for wrr
<cr>	

**EXAMPLE**

```
SM24TBT2DPA(config-if)# qos cos 0
SM24TBT2DPA(config-if)# qos dei 0
SM24TBT2DPA(config-if)# qos dpl 1
SM24TBT2DPA(config-if)# qos dscp-classify any
SM24TBT2DPA(config-if)# qos dscp-classify selected
SM24TBT2DPA(config-if)# qos dscp-remark remap-dp
SM24TBT2DPA(config-if)# qos dscp-remark rewrite
SM24TBT2DPA(config-if)# qos dscp-translate
SM24TBT2DPA(config-if)# qos map cos-tag cos 1 dpl 0 pcp 0 dei 1
SM24TBT2DPA(config-if)# qos policer 500000 flowcontrol
SM24TBT2DPA(config-if)# qos qce addr destination
SM24TBT2DPA(config-if)# qos qce addr source
SM24TBT2DPA(config-if)# qos queue-shaper queue 0 6000 excess
SM24TBT2DPA(config-if)# qos tag-remark mapped
SM24TBT2DPA(config-if)# qos tag-remark pcp 0 dei 0
SM24TBT2DPA(config-if)# qos trust dscp
SM24TBT2DPA(config-if)# qos trust tag
SM24TBT2DPA(config-if)# qos wrr 30 40 50 60 70 80
SM24TBT2DPA(config-if)#

```

**rmon**

Configure Remote Monitoring on an interface.

**Syntax**

**rmon collection history <id> [ buckets <buckets> ] [ interval <interval> ]**

**rmon collection stats <id>**

**Parameters**

collection      Configure Remote Monitoring Collection on an interface

history        Configure history

stats          Configure statistics

<1-65535>    History entry ID

buckets        Requested buckets of intervals. Default is 50 buckets

interval       Interval to sample data for each bucket. Default is 1800 seconds

1-65535>     Requested buckets of intervals

<1-3600>     Interval in seconds to sample data for each bucket

<1-65535>    Statistics entry ID

<cr>

**EXAMPLE**

```
SM24TBT2DPA(config-if)# rmon collection history 1 buckets 5000 interval 450
SM24TBT2DPA(config-if)# rmon collection stats 3000
SM24TBT2DPA(config-if)#{
```

## sflow

Statistics flow.

### Syntax

```
sflow [ <sampler_idx_list> ]
sflow counter-poll-interval [ sampler <sampler_idx_list> ] [ <poll_interval> ]
sflow max-sampling-size [ sampler <sampler_idx_list> ] [ <max_sampling_size> ]
sflow sampler-type [ sampler <sampler_idx_list> ] { rx | tx | all }
sflow sampling-rate [ sampler <sampler_idx_list> ] [ <sampling_rate> ]
```

### Parameters

counter-poll-interval	The interval - in seconds - between counter poller samples.
max-sampling-size	Specifies the maximum number of bytes to transmit per flow sample.
sampler-type	Specifies the types of flow sample.
sampling-rate	Specifies the statistical sampling rate. The sample rate is specified as N to sample 1/Nth of the packets n the monitored flows. There are no restrictions on the value, but the switch will adjust it to the closest possible sampling rate.
<PollInterval : 1-3600>	seconds
<14-200>	bytes
all	sampler type All
rx	sampler type RX
tx	sampler type TX
<1-4294967295>	Sampling rate
<cr>	

### EXAMPLE

```
SM24TBT2DPA(config-if)# sflow counter-poll-interval 450
SM24TBT2DPA(config-if)# sflow max-sampling-size 50
SM24TBT2DPA(config-if)# sflow sampler tx
SM24TBT2DPA(config-if)# sflow sampling-rate 75000
Note: Sampling rate modified from 75000 to 4096 to cater for H/W limitations
SM24TBT2DPA(config-if)#

```

## shut down

Shut down an interface.

### Syntax

```
shutdown <cr>
```

### Parameters

**shutdown** Shutdown of the interface.

<cr>

### EXAMPLE

```
SM24TBT2DPA(config-if)# shutdown?  
shutdown  
SM24TBT2DPA(config-if)# shutdown  
SM24TBT2DPA(config-if)#{
```

## **spanning-tree**

Configure Spanning Tree protocol for an interface.

### **Syntax**

```
spanning-tree
spanning-tree auto-edge
spanning-tree bpdu-guard
spanning-tree edge
spanning-tree link-type { point-to-point | shared | auto }
spanning-tree mst <instance> cost { <cost> | auto }
spanning-tree mst <instance> port-priority <prio>
spanning-tree restricted-role
spanning-tree restricted-tcn
```

### **Parameters**

auto-edge	Auto detect edge status
bpdu-guard	Enable/disable BPDU guard
edge	Edge port
link-type	Port link-type
mst	STP bridge instance
restricted-role	Port role is restricted (never root port)
restricted-tcn	Restrict topology change notifications
auto	Auto detect
point-to-point	Forced to point-to-point
shared	Forced to Shared
<Instance : 0-7>	instance 0-7 (CIST=0, MST2=1...)
cost	STP Cost of this port
port-priority	STP priority of this port
<Cost : 1-200000000>	Cost range
auto	Use auto cost

### **EXAMPLE**

```
SM24TBT2DPA(config-if)# spanning-tree auto-edge
SM24TBT2DPA(config-if)# spanning-tree bpdu-guard
SM24TBT2DPA(config-if)# spanning-tree edge
SM24TBT2DPA(config-if)# spanning-tree link-type auto
SM24TBT2DPA(config-if)# spanning-tree mst 0 cost 500000
SM24TBT2DPA(config-if)# spanning-tree restricted-role
```

## speed

Configure speed for an interface.

### Syntax

```
speed { 10g | 2500 | 1000 | 100 | 10 | 100fx | 100fx-ams | 1000x | 1000x-ams | sfp-auto-ams | auto { [ 10 ] [ 100 ] [ 1000 ] } }
```

### Parameters

**speed** Configures interface speed. If you use 10, 100, or 1000 keywords with the Auto keyword the port will only advertise the specified speeds.

10	10Mbps
100	100Mbps
1000	1Gbps
auto	Auto negotiation

### EXAMPLE

```
SM24TBT2DPA(config-if)# speed 1000
SM24TBT2DPA(config-if)# speed auto
SM24TBT2DPA(config-if)# speed auto 1000
SM24TBT2DPA(config-if)# speed auto 1000 100
SM24TBT2DPA(config-if)# speed 100fx-ams
^
% Invalid word detected at '^' marker.

SM24TBT2DPA(config-if)# do show interface GigabitEthernet 1/3 status
Interface          Mode      Speed & Duplex  Flow Control  Max Frame  Excessive
Link
-----
GigabitEthernet 1/3    enabled   Auto        disabled      9600       Discard
100fdx
SM24TBT2DPA(config-if)#

```

## switchport

Configure Switching mode characteristics for an interface.

### Syntax

```
switchport access vlan <pvid>
switchport forbidden vlan { add | remove } <vlan_list>
switchport hybrid acceptable-frame-type { all | tagged | untagged }
switchport hybrid allowed vlan { all | none | [ add | remove | except ] <vlan_list> }
switchport hybrid egress-tag { none | all [ except-native ] }
switchport hybrid ingress-filtering
switchport hybrid native vlan <pvid>
switchport hybrid port-type { unaware | c-port | s-port | s-custom-port }
switchport mode { access | trunk | hybrid }
switchport trunk allowed vlan { all | none | [ add | remove | except ] <vlan_list> }
switchport trunk native vlan <pvid>
switchport trunk vlan tag native
switchport vlan ip-subnet id <vce_id> <ip4> vlan <vid>
switchport vlan mac <mac_addr> vlan <vid>
switchport vlan protocol group <grp_id> vlan <vid>
switchport voice vlan discovery-protocol { oui | llldp | both }
switchport voice vlan mode { auto | force | disable }
switchport voice vlan security
```

### Parameters

access	Set access mode characteristics of the interface
forbidden	Adds or removes forbidden VLANs from the current list of forbidden VLANs
hybrid	Change PVID for hybrid port
mode	Set mode of the interface
trunk	Change PVID for trunk port
vlan	VLAN commands
voice	Voice appliance attributes
<vlan_id>	VLAN ID of the VLAN when this port is in access mode
vlan	Add or modify VLAN entry in forbidden table.
add	Add to existing list.
remove	Remove from existing list.
<vlan_list>	VLAN IDs - add or remove – forbidden
acceptable-frame-type	Set acceptable frame type on a port

allowed Set allowed VLAN characteristics when interface is in hybrid mode  
egress-tag Egress VLAN tagging configuration  
ingress-filtering VLAN Ingress filter configuration  
native Set native VLAN  
port-type Set port type  
access Set mode to ACCESS unconditionally  
hybrid Set mode to HYBRID unconditionally  
trunk Set mode to TRUNK unconditionally  
allowed Set allowed VLAN characteristics when interface is in trunk mode  
native Set native VLAN  
vlan Vlan commands  
ip-subnet VCL IP Subnet-based VLAN configuration.  
mac MAC-based VLAN commands  
protocol Protocol-based VLAN commands  
vlan Vlan for voice traffic  
discovery-protocol Set Voice VLAN port discovery protocol  
mode Set Voice VLAN port mode  
security Enable Voice VLAN port security mode  
id id keyword  
<1-128> Unique VCE ID for each VCL entry (1-128)  
<ipv4\_subnet> Source IP address and mask (Format: xx.xx.xx.xx/mm.mm.mm.mm).  
group Protocol-based VLAN group commands  
<word16> Group Name (Range: 1 - 16 characters)  
vlan vlan keyword  
<vlan\_id> VLAN ID required for the group to VLAN mapping (Range: 1-4095)  
vlan Vlan for voice traffic  
discovery-protocol Set Voice VLAN port discovery protocol  
mode Set Voice VLAN port mode  
security Enable Voice VLAN port security mode  
both Detect telephony device by OUI address and LLDP  
lldp Detect telephony device by LLDP  
oui Detect telephony device by OUI address  
auto Enable auto detect mode  
disable disjoin Voice VLAN  
force Force to join Voice VLAN  
<cr>

**EXAMPLE**

```
SM24TBT2DPA(config-if)# switchport access vlan 10
SM24TBT2DPA(config-if)# switchport forbidden vlan add 100
SM24TBT2DPA(config-if)# switchport forbidden vlan remove 100
SM24TBT2DPA(config-if)# switchport hybrid acceptable-frame-type all
SM24TBT2DPA(config-if)# switchport mode access
SM24TBT2DPA(config-if)# switchport trunk native vlan 10
SM24TBT2DPA(config-if)# switchport vlan protocol group 1 vlan 100
SM24TBT2DPA(config-if)# switchport voice vlan security
SM24TBT2DPA(config-if)# switchport voice vlan discovery-protocol oui
SM24TBT2DPA(config-if)#{
```

## VLAN Interface Configuration

### Syntax

```
do <command>
end
exit
help
ip address { { <address> <netmask> } | { dhcp [ fallback <fallback_address> <fallback_netmask> [ timeout
<fallback_timeout> ] ] } }
ip dhcp server
ip dhcp server disable

ipv6 mld snooping query-interval <ipmc_qi>
ipv6 mld snooping query-max-response-time <ipmc_qri>
ipv6 mld snooping robustness-variable <ipmc_rv>
ipv6 mld snooping unsolicited-report-interval <ipmc_uri>
no ip address
no ip dhcp server
no ip igmp snooping
no ip igmp snooping compatibility
no ip igmp snooping last-member-query-interval
no ip igmp snooping priority
```

**no ip igmp snooping querier { election | address }**  
**no ip igmp snooping query-interval**  
**no ip igmp snooping query-max-response-time**  
**no ip igmp snooping robustness-variable**  
**no ip igmp snooping unsolicited-report-interval**  
**no ipv6 address [ <ipv6\_subnet> ]**  
**no ipv6 mld snooping**  
**no ipv6 mld snooping compatibility**  
**no ipv6 mld snooping last-member-query-interval**  
**no ipv6 mld snooping priority**  
**no ipv6 mld snooping querier election**  
**no ipv6 mld snooping query-interval**  
**no ipv6 mld snooping query-max-response-time**  
**no ipv6 mld snooping robustness-variable**  
**no ipv6 mld snooping unsolicited-report-interval**

#### Parameters

<vlan_list>	List of VLAN interface numbers, 1~4095
do	To run exec commands in config mode
end	Go back to EXEC mode
exit	Exit from current mode
help	Description of the interactive help system
ip	Interface Internet Protocol config commands
ipv6	IPv6 configuration commands
no	Negate a command or set its defaults
address	Address configuraton
dhcp	Configure DHCP server parameters
igmp	Internet Group Management Protocol
snooping	Snooping IGMP
compatibility	Interface compatibility
last-member-query-interval	Last Member Query Interval in tenths of seconds
priority	Interface CoS priority
querier	IGMP Querier configuration
query-interval	Query Interval in seconds
query-max-response-time	Query Response Interval in tenths of seconds
robustness-variable	Robustness Variable (RV)

unsolicited-report-interval	Unsolicited Report Interval in seconds
address	Configure the IPv6 address of an interface
mld	Multicast Listener Discovery
X:X:X:X::X/<0-128>	IPv6 prefix x:x::y/z
snooping	Snooping MLD
<ipv4_addr>	IP address
dhcp	Enable DHCP client
<ipv4_netmask>	IP netmask
fallback	DHCP fallback settings
<ipv4_addr>	DHCP fallback address
<ipv4_netmask>	DHCP fallback netmask
timeout	DHCP fallback timeout
seconds	DHCP fallback timeout in seconds. Legal values are 0 to 4294967295 seconds
auto	Compatible with IGMPv1/IGMPv2/IGMPv3
v1	Forced IGMPv1
v2	Forced IGMPv2
v3	Forced IGMPv3
<lpmcLmqi : 0-31744>	0 - 31744 tenths of seconds
<CosPriority : 0-7>	CoS priority ranges from 0 to 7
address	IGMP Querier address configuration
election	Act as an IGMP Querier to join Querier-Election
<ipv4_unicast>	A valid IPv4 unicast address
<lpmcQi : 1-31744>	1 - 31744 seconds
<lpmcQri : 0-31744>	0 - 31744 tenths of seconds
<lpmcRv : 1-255>	Packet loss tolerance count from 1 to 255
<lpmcUri : 0-31744>	0 - 31744 seconds
auto	Compatible with MLDv1/MLDv2
v1	Forced MLDv1
v2	Forced MLDv2

## EXAMPLE

```
SM24TBT2DPA(config-if-vlan)# ip dhcp server
SM24TBT2DPA(config-if-vlan)# ip address 1.2.3.4 255.255.255.0
SM24TBT2DPA(config-if-vlan)# ip address dhcp fallback 2.4.6.8 255.255.255.0 timeout
90000
SM24TBT2DPA(config-if-vlan)#

```

## 21. Traceroute Commands

ConfigureTraceroute parameters.

### SYNTAX

```
traceroute ip <v_ip_addr> [ protocol { icmp | udp | tcp } ] [ wait <v_wait_time> ] [ ttl <v_max_ttl> ] [ nqueries <v_nqueries> ]
```

### Parameters

<b>ip</b>	IP
<b>&lt;word1-255&gt;</b>	destination address
<b>nqueries</b>	Specify number of probe packets
<b>protocol</b>	Specify protocol including icmp, udp and tcp
<b>ttl</b>	Specify max TTL
<b>wait</b>	Specify wait time
<b>&lt;nqueries : 1-10&gt;</b>	1-10; Default is 3
<b>icmp</b>	icmp/udp/tcp; Default is icmp
<b>tcp</b>	Use TCP
<b>udp</b>	Use UDP
<b>&lt;max_ttl : 1-255&gt;</b>	1-255; Default is 30
<b>&lt;wait_time : 1-60&gt;</b>	1-60 seconds; default is 5 seconds

### EXAMPLE

```
SM24TBT2DPA# traceroute ip 192.168.1.77
traceroute to 192.168.1.77 (192.168.1.77), 30 hops max, 140 byte packets
 1 192.168.1.77 (192.168.1.77)  0 ms  0 ms  0 ms
SM24TBT2DPA#
```

## 22. Cable Diagnostic Commands

The Cable Diagnostic command is used for running the Cable Diagnostics for 10/100 and 1G copper ports. This will take about 5-20 seconds. When completed, you can view the cable diagnostics results for the selected interface in the cable status table. Parameters reported are Link Status, Test Result, and Length. Note that Cable Diagnostic is only accurate for cables of length 7 - 120 meters with 5-meter accuracy. The 10 and 100 Mbps ports will be linked down while running Cable Diagnostics. So running Cable Diagnostics on a 10 or 100 Mbps management port will cause the switch to stop responding until Cable Diagnostics is complete.

### SYNTAX

**CableDiag interface <port\_type> <port\_type\_id>**

### Parameters

CableDiag	Cable Diagnostic keyword
interface	Interface keyword
GigabitEthernet	1 Gigabit Ethernet Port
<port_type_id>	Port ID in 1/1-26

### EXAMPLE

```
SM24TBT2DPA# CableDiag interface GigabitEthernet 1/1
Starting Cable Diagnostic - Please wait
Interface          Link Status    Test Result    Length
-----            -----
GigabitEthernet 1/1      1G           detect error or check cable length is be
tween 7-120 meters

SM24TBT2DPA# CableDiag interface GigabitEthernet 1/2
Starting Cable Diagnostic - Please wait
Interface          Link Status    Test Result    Length
-----            -----
GigabitEthernet 1/2      Link Down     Abnormal        3(m)
SM24TBT2DPA#
```

### Test Result Parameters

**Link Status** : The status of the cable:

**10M** : Cable is link up and correct. Speed is 10Mbps

**100M** : Cable is link up and correct. Speed is 100Mbps

**1G** : Cable is link up and correct. Speed is 1Gbps

**Link Down** : Link down or cable is not correct.

**Test Result** : Test Result of the cable:

**OK** : Correctly terminated pair

**Abnormal** : Incorrectly terminated pair or link down

**Length** : The length (in meters) of the cable pair. The resolution is 3 meters. When Link Status is shown as follows, the length has different definition.

**1G** : The length is the minimum value of 4-pair.

**10M/100M** : The length is the minimum value of 2-pair.

**Link Down** : The length is the minimum value of non-zero of 4-pair.

## 23. Configure DHCP per Port

You can configure DHCP Per Port via the CLI and Web UI. The DHCP Per Port factory default mode is Disabled. See the *SM24TBT2DPA Web User Guide* for web UI operation.

The switch's DHCP server assigns IP addresses. Clients get IP addresses in sequence and the switch assigns IP addresses to on a per-port basis starting from the configured IP range. For example, if the IP address range is configured as 192.168.10.20 - 192.168.10.37 with one DHCP device connected to port 1, the client will always get IP address 192.168.10.20, then port 3 is always distributed IP address 192.168.10.22, even if port 2 is an empty port (because port 2 is always distributed IP address 192.168.10.21).

The switch does not allow a DHCP per Port pool to include the switch's address.

IP address assigned range and VLAN 1 should stay in the same subnet mask.

The configurable IP address range is allowed to configure over 18 IP addresses, but the switch always assigns one IP address per port connecting device.

When the DHCP Per Port function is enabled, the switch software will automatically create the related DHCP pool named "DHCP\_Per\_Port".

Once the DHCP Per Port function is enabled on one switch, IPv4 DHCP client at VLAN1 mode (DMS DHCP mode), DHCP server mode are all limited to be enabled at the same time (an error message displays if attempted).

If the DHCP server pool has been configured, once you enable the DHCP Per port function that DHCP server pool configuration will be overwritten.

Only for VLAN 1, clients issued DHCP packets will not be broadcast/forwarded to other ports. DHCP packets in others VLANs will be broadcast/forwarded to others ports.

The DHCP Per Port function allows the switch to connect only one DHCP client device.

The DHCP Per Port function is configured and shown using these CLI commands:

```
# show ip dhcp server  
(config)# ip dhcp server per-port  
(config)# no ip dhcp server per-port
```

The CLI commands to configure and show DHCP Per Port are described below.

**Command:** Show the current DHCP Server and DHCP Per Port configuration

**Syntax:** **show ip dhcp server <cr>**

**Description:** Show if DHCP server is globally enabled or disabled, if all VLANs are disabled or enabled, and if the DHCP server Per Port function is disabled or enabled.

**Example:** Display the current DHCP Server and Per Port configuration, change the config, and display the results:

```
SM24TBT2DPA(config)# do show ip dhcp server
```

DHCP server is globally enabled.

Enabled VLANs are 1.

DHCP server per port is disabled.

```
SM24TBT2DPA(config)# ip dhcp server per-port
```

```
SM24TBT2DPA(config)# do show ip dhcp server
```

DHCP server is globally enabled.

Enabled VLANs are 1.

DHCP server per port is enabled.

```
SM24TBT2DPA(config)# no ip dhcp server per-port
```

```
SM24TBT2DPA(config)# do show ip dhcp server
```

DHCP server is globally enabled.

Enabled VLANs are 1.

DHCP server per port is disabled.

```
SM24TBT2DPA(config)#
```

```
SM24TBT2DPA# show ip dhcp pool ?
|       Output modifiers
WORD    Pool name in 32 characters
<cr>
SM24TBT2DPA# show ip dhcp pool DHCP_Per_Port
```

Pool Name: DHCP\_Per\_Port

---

```
Type is network
IP or IP Start is 192.168.1.0
Subnet mask or IP End is 255.255.255.0
Subnet broadcast address is -
Lease time is 100 days 0 hours 0 minutes
Default router is 192.168.1.254
Domain name is -
DNS server is 8.8.8.8
TFTP server is -
Boot file is -
NTP server is -
Netbios name server is -
Netbios node type is -
Netbios scope identifier is -
NIS domain name is -
NIS server is -
Vendor class information is -
Client identifier is -
Hardware address is -
Client name is -
```

```
SM24TBT2DPA#
```

**Command:** Configure the DHCP per Port function

**Syntax:** **ip dhcp server per-port <cr>**

**Description:** Toggle the DHCP Per Port function from Disabled (default) to Enabled.

**Example:** Toggle the DHCP Per Port function and show the resulting config:

```
SM24TBT2DPA# show ip dhcp server
DHCP server is globally disabled.

All VLANs are disabled.

SM24TBT2DPA# con ter

SM24TBT2DPA(config)# ip dhcp ?
  excluded-address  Prevent DHCP from assigning certain addresses
  pool              Configure DHCP address pools
  relay             DHCP relay agent configuration
  server            Enable DHCP server
  snooping          DHCP snooping

SM24TBT2DPA(config)# ip dhcp server ?
  <cr>

SM24TBT2DPA(config)# ip dhcp server
SM24TBT2DPA(config)# end
SM24TBT2DPA# show ip dhcp server

DHCP server is globally enabled.

All VLANs are disabled.

SM24TBT2DPA#
```

## 23-1 DHCP IP per Port

The SM24TBT2DPB supports the DHCP IP Per Port function. It lets you have an IP address from a DHCP pool on a switch be statically assigned to a switchport, such that whichever device plugs into the switchport it will always be assigned that specific IP address. The IP address is configured in the interface config settings. **Note** that this is binding an IP address to an interface, not to a MAC address, which is the classic binding technique found on most switches.

### 23-1.1 DHCP Per Port VLAN Command

**Command:** `ip dhcp server per-port`

**Description:** Set DHCP per port VLAN (the VLAN associated with the IP interface). Only ports in this VLAN will be able to access the IP interface. This command is only available for input when creating a new interface. Added at FW v 8.50.0079.

**Mode:** Config mode

**Syntax:** `ip dhcp server per-port [ vlan { <portVLAN> } ]`

**Parameters:** `per-port` Enable DHCP server per port

`vlan` DHCP server per port VLAN

`<vlan_id>` Set DHCP server per port VLAN

**Example:**

```
SM24TBT2DPB(config)# ip dhcp server per-port vlan 10
% Failed to create interface vlan 10
SM48TAT4XA-RP(config)# ip dhcp server per-port vlan 1
SM48TAT4XA-RP(config)# do show ip dhcp vlan 10
```

VLAN: 10

```
-----
Mode: Disabled
Type: Network
IP Range: 0.0.0.0 - 0.0.0.0
Lease Time: 86400
Subnet Mask: 0.0.0.0
Default Router: 0.0.0.0
DNS Server: 0.0.0.0
```

```
SM24TBT2DPB(config)# do show ip dhcp vlan 1
```

```
VLAN: 1
```

```
-----  
Mode:          Disabled  
Type:          Network  
IP Range:     0.0.0.0 - 0.0.0.0  
Lease Time:    86400  
Subnet Mask:   0.0.0.0  
Default Router: 0.0.0.0  
DNS Server:   0.0.0.0  
-----
```

```
SM24TBT2DPB(config)#
```
