Overview

Out of the box, the M113 is set to the **+UMNOPROF: 0: SW** default U-Blox profile. If you're using a private APN, you may need to change to the Verizon profile to properly provision the SIM card. This document provides information on changing the M113 to the Verizon profile. It also shows how to validate network attachment data connectivity. This document only applies to the Verizon network in the United States and Canada on Lantronix part number M113F002S. For a full list of AT-Commands see the [Sara-R4_ATComands](#) guide from U-Blox.
