

Open-Q™ RB Development Kit

The Open-Q™ RB development kit is designed for rapid prototyping of new innovative products requiring advanced imaging and computer vision performance in low-cost and low-power embedded situations. It comprises separate hardware modules connected by high-speed and low-speed connectors. It is compliant with the 96Boards open hardware specification standard, providing the flexibility for users to add additional 3rd party mezzanine expansion boards.

The development kit is compatible with the Open-Q 4210 and 2210 SIPs. Users can use the same development kit to evaluate or prototype with many SIP families from Lantronix.

Key Features & Benefits

- The development kit provides hardware interfaces to evaluate camera, video, display on LCD and HDMI, and connectivity capabilities
- Supports many robotic features
- User can expand the kit with compatible boards from 96Boards

Engineering Services:

We provide a full solution – our unparalleled engineering expertise and product development skills deliver innovative products that are cost-effective and can jumpstart your go-to-market timeline.

Our business model offers turnkey product development services, or we can augment your team in specific areas of development. The choice is yours.

Key development expertise in:

- Camera development and tuning
- Voice control
- Machine learning
- Mechanical & RF design
- Thermal & power optimization

IoT product development made easy.
