**Description and Extent of Change**

Lantronix is pleased to announce the release of new and improved SLB firmware version 6.3.0.0. The release includes new features and bug fixes including:

- The Java-based WebSSH and WebTelnet application has been replaced with a non-Java-based application.
- Support for Transport Layer Security (TLS) 1.1 and 1.2 has been added
- Zero Touch Provisioning – allows a SLB device to acquire a default configuration from a DHCP or TFTP server upon boot up
- Web SSL certificate is 2048 bit as a default
- NTP vulnerabilities CVE-2013-5211, CVE-2014-9293, CVE-2014-9294, CVE-2014-9295 and CVE-2014-9296 have been fixed
• SSH vulnerability CVE-2015-5600 has been fixed
• HTTP clickjacking vulnerability CVE-2016-0734 has been fixed
• Insecure DES and 3DES ciphers (CVE-2016-2183) have been removed from SSL support

For customers that would like to take advantage of the new capabilities of firmware version 6.3.0.0, the firmware patch will be available for download from our website by December 2, 2016: http://www.lantronix.com/support/downloads.

Other Changes Included with the New Revision
In addition to the firmware change described above, the affected products underwent a modem interface change in December 2015. The original 6-pin RJ25 interface was replaced by a 2-pin RJ11 interface to resolve modem connection issues reported in the field.

Effect of Change on Fit, Form, or Function
Change is limited to product functionality described above.

Effective Date of Change
Affected products with firmware version 6.3.0.0 and RJ11 modem interface will begin shipping from the factory by December 3, 2016.

If you have any questions, please contact your sales representative or Lantronix Technical Support at (800) 422-7044 or (949) 453-7198.
