

ERRATA: LED FUNCTIONALITY

Dear Valued Lantronix Customer,

There is a known issue with this product's wireless LED status light. The product functions correctly, however, the wireless LED light operates opposite of what is shown in the User Guide.

LED functionality on this unit:

Wireless off => LED on

Wireless on, searching => LED on

Wireless on, attempt to associate => LED blinking (very short)

Wireless on, associated, power management off => LED off

Wireless on, associated, power management on => LED off when receiving or transmitted, on in between.

This is an issue in the wireless radio driver, not in the design of the product. Lantronix is working with the radio manufacturer to have the problem corrected, and a firmware fix will be released at a future date.

For further information on this issue, please visit the link below and review FAQ ID 1296.
